Your country was ruled by the CCCP (USSR) for many years. Ask Vaira
Vike-Freiberga to invite the Russians back for an informal cup of tea and
have them stay awhile. Sound pleasant to you?

Unless you have lived here for awhile, I doubt you know enough about the US
to judge whether or not the average citizen feels they live under a "police
state". I would not pay too much attention to sensationalist news broadcasts
or newsgroup posts to dictate your views of the "average American citizen".

Jackie

It should be of interesting note to know that posts , nearly
identical to this original post by " supposed " journalists ..were
commonly seen on the cellular hacking NGs back in the 92 - 94 era.

they were fairly common and numerous. turned out they were most
often made by FBI personnel (+ possibly other government
agencies) and initially the information made it's way into reports
used by the government and private manufactures to craft / draft
the super strict killer FCC EE3 cellular legislation and resultant
rule making. this rule making basically resulted in the death of
all USA cellular hacking and was used in most of the
anti-eavesdropping legislation too. it was claimed , in
about '94 , that the same information gained was used by the feds to
prosecute a number of people that supplied information to the
posters of the requests. people thought they were protected by
confidential reporter acts , when in reality they were actually
inter reacting directly with federal law enforcement people and THOSE
people are NOT required , by law , to be truthful with you. lieing
such as claiming to be journalists is not illegal for law enforcement
operatives.

interesting , slightly different in these posts is that the person is
seeking information strictly on (illegal) eavesdropping and
not the so called " hacking " like posts of the earlier era.
this , probably because " they " know that basic cellular
hacking is dead and that only " eavesdropping " could remain.

dunno what anyone , even law enforcement people , could expect to gain
by this old ploy / exploit , anymore. cellular hacking is dead and
analog cellular eavesdropping is experiencing the death rattle.
still .... it's good to remember the historic relationships and
keep that in mind , nowadays. might also be some homeland
defense people with too much time on their hands too.

Bill, That is worldwide at every RS. They are a consumer retailer and Hams and scanner ops are not their customers anymore because they found out there are not nearly as many of us and we don't spend $$ like its going out of style on R/C cars, DSS systems, and Cell phones. You want parts try Digikey or Tessco. The first one will get online with you in an IM session and review what you need to make sure its right and make some alternatives available. I don't work for them I'm just a very satisfied customer. They may not know about a BC780 but if you tell them its a 12v Cigar plug on one end and a barrel connector with (blank)mm size OD and ID on the other they can get it or at least all the parts to make one up.

Good Luck.

I have winscan and it has a button marked record audio to wav file.

I don't know what I am doing wrong but I can't seem to find the audio wave files.

I can record to a recorder, but can't seem to get it to record to a wave file on my computer.

Suggestions welcomed

Bill Carty

It is in the winscan folder. If you want to use something better for the
recording and control then try Trunkstar780. Winscan780 will breakup
each transmission into a new .wav file. Trunkstar780 will keep
everything in one file with the time and date stamped.

I agree Jim, the USA is a police state eh? Wonder if the former Soviet
block countries could ever travel across state lines without miles of
paperwork and permission slips? Or carry a concealed weapon? Or go
somewhere without filling out a trip sheet? Don't make me laugh.

Sure the USA is clamping down, we have no choice. And a lot of us DO NOT
LIKE the Patriot Act. But guess what? We ain't the bad guys. I have no
```

problem at all talking with my government or their police. Could you say the same? Think about it.

Dan/W4NTI Born in the USA and damn proud of it.

16. AOR AR 8600MKII or Yaesu VR5000

Again this is wrong information on the PRO-96 and Win 96 posted by
those who should not be allowed to use crayons much less a digital
scanner.

A user who could not figure out how Win 96 works should have asked
someone via the Internet.

With PRO-96 and Win 96 a user who knows how it works can paste and
entire page at a time not a cell at a time.
I can select channel data in Word or Excel and paste the whole bank
into Win 96. I can manipulate data so fast it is almost uncanny.
I find copying and dropping WEB data into WORD useful because there are
non breaking spaces often added by some dynamic web pages which create
some difficulty in manipulating data in most software products. Excel
or Win-96 for instance may not recognize a frequency copied from some
web sites as a number even though it looks likes a number to the human
eye.

I use Word's global replace to strip that stuff out and the data is
good to go.

I can transfer data to those who are computer challenged in CSV format
and they can program their copy of Win 96 in the flash of an eye blink.
Of course I can send data in P96 format but those with a Uniden scanner
can not use that format. Smart ones can also use my CSV format files
with a few editing steps.

Skip Winscan and Trunkstar, neither of which work very well. Use IDTracker instead for recording.

19. AOR AR8600MkII - SSB and AM Collins Filters

Newsgroup: rec.radio.scanner
Date: 2004-06-02 00:21:50 UTC
From: DougSlug <dougslug@hotmail.com>
Message-ID: <y49vc.19492$eU6.4136841@news4.srv.hcvlny.cv.net>
Source record: 20284
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I am considering replacing the SSB and AM filters in my AOR AR8600MkII with the optional Collins filters, so I am seeking feedback on whether or not this is a worthwhile upgrade. To anyone who has done this upgrade: What, if any, improvements did you notice in HF and/or AM broadcast performance? I listen to HF amateur comms (including SSB phone, CW and decoding of PSK31) and SW broadcast fairly regularly...could I expect any major improvements in those applications with the better filters installed?

Also, the AOR technical bulletin on the optional filters warns that the 6 kHz AM filter may be too narrow for HVF Air Band use ("where the centre frequencies can be offset by a few kHz"). Has anyone encountered such a problem?

Thanks,
Doug

That only works if you're recording trunked frequencies. I like to use
Audadcity for general recording off the scanner.

Trunkstar works great for recording and controlling the radio. I do like
to use ACR780 for working on the freq files. What is it about Trunkstar
that you think does not work very well when it comes to controlling and
recording? Also like what was already said, ID tracker will only work
for trunked systems.

Granted only few % of population want to listen to scanner.
Still, $$$$ (average $500) for a electronic device is a bit too much.
Don't you think?

I can buy a nice PC for $500!!!

Actually, my experience is that most scanners are bargains! I just got two
Radioshack Pro 95 scanners for $199 each... That's 2000 channels
altogether...:-) Trunking included...

For $500 I can get a Pro 96, which is a digital scanner, but I don't need
that much capability around here (yet).

Yes but remember when that PC was $1500 and how many they had to sell before that price came down? I believe the scanner and Ham radio markets are very close in that there will never be as big of a market to make a Pro-96 or an Elecraft K2 much cheaper than they are. This is easy to figure out in the Ham community. Look at the FCC stats on licensed hams, there are simply not enough buyers out there to make a large market.

If this stuff was like HDTV's it would catch on over a few years and everyone could buy 3 cheap later.

26. Ok I've finally decided to buy VR-500 .. few questions

Newsgroup: rec.radio.scanner
Date: 2004-06-02 02:20:41 UTC

Source record: 20291

Hi all,

After lots of looking around, VR-500 seems to have almost everything I'm looking for. It is small, uses regular AA battery, covers most frequency & mode etc.

Few questions to those who own VR-500:
1. Can I switch mode in every frequency? Eg. I'm tuning 463 Mhz and I want to switch to AM mode rather than the standard FM mode.
2. What is your impression with speaker volume? I've heard it sounds "tinny."
3. Finally, I have a choice of purchasing this unit from US or UK. What are the pros and cons besides cost? Eg. better quality product etc.

TIA.

> I can buy a nice PC for $500!!!<

Yeah, I guess a computer is a reasonable comparison - in terms of
flexibility.

However, computer costs are not 'fixed' (ISP's, software, upgrades, etc) A
scanner is a self-contained radio that can listen to almost everything one
would need to hear. Operating costs are cheap and usually the *good* radios
retain some value over the years. So, IMO, a scanner is probably the
cheapest form of radio listening one can purchase. Even shortwaves have
limitations and they get pricy too.

Last, it's a niche market. Why does an Aston Martin cost 10x the price of a
Corvette? Both are great products....one has features the other does not.
(If only the Nameplate)

Scanners, while not 'cheap', are affordable - and that's okay by me.
Mike T.

Yes, the VR-500 is quite flexible in this regard.

> 2. What is your impression with speaker volume? I've heard it sounds "tinny."

It is anemic (weak). I like my VR-500 in most respects, *except* for the
speaker audio and limited dynamic range of the front end on shortwave.

> 3. Finally, I have a choice of purchasing this unit from US or UK. What are
> the pros and cons besides cost? Eg. better quality product etc.

The UK version will probably provide you with full frequency coverage.
The USA version omits the cell phone bands and other slivers
of spectrum:

620.9 to 629.3
784.6 to 797.195
807.1 to 819.695
824.0 to 849.0
869.0 to 894.0 MHz

If you live in the USA and your UK version VR-500 needs Yaesu
service, you probably have to ship it back to the UK for repair.

You are welcome to use tk500, the free, open source software
I developed for the VR-500. Check it out at http://parnass.com

Seems to me you've answered your own question there.
If every other person on the planet ran out and bought a scanner,no doubt
we'd see a nice price drop.

>
> I can buy a nice PC for $500!!!

Sure you can.
Its the software,accesories,upgrades,ink cartridges,ISP's ect that'll kill
ya.
These days even monitors are considered an accessory for a 'bargain'
computer.

Well, wouldn't you know as soon as I sent this message, I hit the jackpot.
Unfortunately, everything for my area seems to be trunked and in the 800
frequencies.
Guess I'm not going to get much out of my freebee scanner...

No, it's just a basic audio recording app.

I know TrunkStar does the time stamp thing, but it's nothing like
IDTracker (both of which I use).

IDTracker records conventional frequencies just fine if it is set up
properly. It is necessary to select the relevant bank, select Edit, and
check the track frequencies box.

Trunkstar and the other Signal Intelligence programs I've tried are full of
bugs and missing functions. Trunkstar780 actually assigned the wrong
talkgroup ID to the WAV files when I auditioned the program. Maybe that was
fixed in one of the dozens of versions of the program, but I don't have the
time to keep up with the new release of the week. The author of Trunkstar is
not very competent and would probably not be able to make a living writing
software in a more demanding venue.

We do agree on Butel software - good stuff.

Scanners are expensive because people like to feel they are part of an exclusive hobby, and because the ordinary Joe Blow has too much completely disposable income.

The science is not new or expensive. Eveybody has it figured out.
They stamp these radios out like happy meal toys.

Consider those Family Radios.

Each month the manufacturers come out with new radios that have new features.

They've been capable of incorporating all these features from the very first radio. Family radios and scanner radios aint rocket brain science to these manufacturers.
They string us along because that's what the market will bear.

The market bears it because Joe Blow has 500 bucks he isn't bright enough to hold on to.

I'm thinking about replacing my BC780xlt this summer. I got it shortly after they were released. Sadly, it's got a few bumps and bruises from falling off a shelf a couple of times. (oops!)

Anyway, I'm starting to look at new units. I can't say that I've really kept up on advancements in the scanner world for the last couple of years.

Right now I'm kind of looking at either the 785D or the 250D. I don't really need the digital capability at the moment, but I suppose I might in the future. I don't really want to spend the money for Unidens 796 or 296 models.

Any recommendations?

>limitations and they get pricy too.

The basic $9.00 Japanese clock radio that pulls in the local AM
stations would be the cheapest form of radio listening one can
purchase. Which, again, is fine if you want to listen to the news
hours after it happens.

Trolling news groups, looking to inflame. A fine waste of bandwidth.
Just think, if you dumped dumbcast, it would save 50 beans a month
(plus others wouldn't be subjected to your dribble). After a year
you'd have enough to buy a decent scanner.

Hmmmm, let me think about this. Given the choice between trolling
news groups and listening to scanners. I know what my choice was and
I'm pretty sure I've got yours figured out too.

I have the same interest in the Collins filters because they have steeper and, presumably, deeper skirts.

Re the air bands, I thought the AR8600MkII had the correct step programming for that band. If you're "on frequency", there should be no problem with the filters. The wider filters would be better if you're "off frequency" because your radio is scanning with the wrong step intervals.

I would keep the 780 until you are in need of a digital radio. Chances
are that there will be newer digital models out by the time you need
one. What you dont want to do is replace the 780 with a 785. The 780 is
the better of the two.

Actually, I think the technical bulletin was implying that the transmitters may sometimes be off frequency. Since I don't often monitor the air band, I don't know if this is a common problem.

Do you need Mil. Air? The info that I saw on the 246, it will not receive Mil. Air. You might just set down and write out what you need in a scanner, like freq. range and features. After you have all your thoughts on paper, just check out different scanners what they have to offer.

Is your BC780 working ok after the bumps and bruises? If your BC780 is not working ok, might just send it in to get fix. The BC780 is a good scanner, but now my Sheriff Office and Highway patrol has gone digital, so now I need a digital scanner.

From what I hear it will be a little more then the BC245. My guess is
going to be in the $225-$250 range.

Go to :

<http://www.strongsignals.net/index.cgi>

and click on Favorite pages then scroll down to MESSAGE BOARDS and go
to
the FREQUENCY board. Down the bottom, under the posting pain, is a great
list of links
to different states that have a lot of frequency information on State
Police!
At the top of the lists is TRUNKING information. Check this out for the
states that have gone trunked.

You may also want to buy a copy of POLICE CALL for the CD that covers
the hole country!

I don't really do any mil-air. I did have some of the freqs programmed
into my bc780 shortly after 9/11 when they were flying CAP over
Chicago. I quickly took it out though, because out here in the
boonies, I couldn't hear anything.

>Is your BC780 working ok after the bumps and bruises? If your BC780 is not
>working ok, might just send it in to get fix. The BC780 is a good scanner,

For the time being it's working ok. The volume/squelch knob is loose,
though (ouch!) I fear that it might be getting worse -- but it could
just be in my head.

Where in ....

'THE NEW COMPACT HANDHELD BC-246T LOOKS TO BE A BREAKTHROUGH IN SCANNER
DESIGN!! Measuring a mere 4-1/2 x 2-3/4 x 1-3/4, This Scanner will Cover 25-
1300Mhz, Do Motorola, GE & LTR Trunking, & have a Whopping 3,300 AlphNumeric
Channels!! And That's just the start!! - a Built-in Wireless Frequency
Counter will lock onto transmissions in an instant, ctcss, & DCS w/ instant
decode, Accepts REGULAR 'AA' Batteries (only 2), & will INclude NiMi AA's &
Charger!!. Dynamic Memory Configuration allows memories & groups to be
configured any way the user desires! PC Programming & control Too!! ...'

Do you see those gaps ?
25-1300 mhz sounds pretty straight forward to me.

I have a plain 8600 with all the optional filters and I would not
recommend the Collins AM filter. Due to its "deeper skirt" AM
reception is a bit tinny and more harsh than the stock AM filter, I
find that listening to Milair and VHF aero can become a bit of an
effort after an hour or so. This is even the case with exteranl
speakers, although when it is connected to a Icom SP-20 it does become
bearable.

You're more than welcome. I didn't think you were a troll, so I replied sincerely with my thoughts. (If one could call my posting 'a thought') In any case, it's a specialty item so it's priced accordingly. And, if you were like me, back in the 'bad old days'.....I bought a crystal 4 channel 'handheld' for around 100 dollars in the late 70's. I could only afford one crystal - my local firehouse. Lot's of cash, but I had fun.

But, I loved that little unit dearly as I could hear *all* the 'news' before it was published. Anyway, I don't regret spending that cash any more than what I spent on my current 'communications receiver'. (Expensive) I guess it's all about how much one enjoys the hobby.

Regards,
Mike T.

Thanks for the feedback, Bruce. I was a little concerned about the AM filter being too narrow for AM broadcast; however, I'm wondering if it helps with SW broadcast due to better rejection of adjacent stations. How about the SSB filter? How would you characterize the performance of that one versus the stock filter?

- Doug

81. SF Bay Area Traffic Aircraft Frequencies?

Newsgroup: rec.radio.scanner
Date: 2004-06-04 02:22:06 UTC
From: Donald K <kernsdSPAMLIGHTNINGROD@aol.com>
Message-ID: <c9omce01m17@enews2.newsguy.com>
Source record: 20396

Greetings all,

I did the appropriate google searches of [alt|rec].radio.scanner

and found the following:

450.0625 - Metro Traffic Control
450.0875 - KCBS (740)
450.0975 - kcbs 740 news
450.2125 - KGO (810)/KSFO (560)
450.2375 - knbr 680 traffic
450.4625 - Metro Traffic Control
450.5375 - Metro Traffic Control
450.5625 - Metro Traffic Control
455.0625 - Metro Traffic Control
467.6750 - Metro Traffic Control

But most are 5 to 12 years old.

Anybody out there that can confirm that those freqs are or are not in
use? Especially in the south bay?

-Donald

Message-ID: <40C04538.2A5FEC3F@mitre.org.nospam>
Source record: 20398

The folks at Scanner Master
carry a "National Highway Patrol Reference Guide" ,
here's a book that deals with highway patrols. It may have
information that your looking for and may supplement other on line
sources.

<http://www.scannermaster.com/store/01-680767.html>

And they publish several regional frequency guides for:

Chargoland
Philadelphia
DC Delaware Maryland
New York NJ
Also, Massachusetts with New England states are covered!
The have squelch tone code data!

Another frequency book that covers all the states is
"Monitor America" published by Scanner Master
It gives frequencies state by state. The first section in each
listing goes over the state police, their frequencies and
the locations of the different troops. It also has squelch tone code
data
for many agencies! Some trunking information is
listed also mostly with no talk groups.

In any of the source you look at they may still list VHF low band,
VHF High band and UHF conventional frequencies along with 800/900 MHz
trunking frequencies and system information. If a state has trunking
there
may be little or now activity on the conventional frequencies.

Another aspect of traveling around the interstate system here in america

are laws banning police radio scanners,
check your state(s) here:

<http://www.afn.org/~afn09444/scanlaws/>

If your don't have a separate CB radio transceiver and if your scanner
will cover 27.185 MHz AM then add CH 19 into your scanner!
There are limitations on CB radio traffic and it gets boring. But some
times
you can really get a good traffic report over the CB channel, that just
isn't available any where else!
If you have a portable general coverage short wave radio receiver that
will go up to 27 Megs then

us this in the vehicle to monitor CB CH 19. With either a scanner or short wave radio you can
listen to "out banders" above and below the 40 channels of a stock CB radio, around 26.5 MHz and up to 27.5 Mhz

Get a external magnetic mount antenna for ALL your after market radios
DO NOT US a SPLITTER or "T"
connector to run one (1) antenna to a CB tranceiver (or any other transceiver-transmitter) and a police scanner.
However shareing one (1) antenna with two or more receivers is O. K. but, you may find they interfere with each other locking
up the scanning with internal oscillations going over the patch co-ax cable, to the other radio!
jim

Because 1/2 of my commute is on Bear Creek Rd and I need to keep my
hands on the wheel and eyes on the road.

My QTH is in a serious radio hole, we don't even get broadcast TV.

I can just barely get out of the SLV with 40W on 2 meters.

According to RadioReference, Alburquerque uses an EDACS pro voice
system, and only a few talkgroups are analog. No scanner made today
handles pro voice; but for those few analog talkgroups, a scanner like
the BC245 or PRO92 would likely work.

The 2002 is not junk. It is a decent 20 channel radio although typcially over priced. If your primary interest is ACARS then it should do fine. AOR's of that era tend to be very sensitive and if you are in a high signal area like a city they are prone to interference.

I think it would serve you well for ACARS. Universal sells a nice airband filter. It fits between your antenna and radio and does a great job of filtering out all non Civil airband signals. I found that it did a great job of increasing my ACARS captures and the quality of the transmissions.

> anything Military related is considered on topic<<

Hell, I've been to your site a million times and love it, but I live in
Toronto, Canada.

I've tried every freq. posted and *still* have never heard a Military comm.
I'm too far away to listen to your *regional* transmissions, but the USAF is
certainly not restricted to FLA. How come I've never heard any North-East
Comms - you know, Air Force over NYC, or whatever. Basically, I've given up
trying, but surely this must be possible. Anyone else in my neck of the
woods monitor USAF or US comms in general? If so, I'd appreciate any help -
I'd like to listen to this on my scanner instead of through a website.

Thanks in advance,
Mike

They make a marvelous little DC injector that I'm using in my van
to feed DC power to the GPS antenna (it requires more than 5V bias).

They work great, and they're cheap! ($30-$40 or so).

AR makes lots of other nice products too. In fact, I would
consider their web site to be dangerous to one's checkbook.

Keep the peace(es).

WLS?

Yup, I can hit Bonny Dune with 50mW. Little scratchy. 7 miles line of sight I believe. I have a little ridge between them and me though. About 900', one mile away.

Have a harder time getting into AOK, but I can. FB is ok. KE is hard but doable. VS is iffy.

Can't hit BJ in Santa Cruz to save my life. What? Say 13-15 miles away... Watsonville? You gotta be kidding.

If you want to have nightmares, email me and I'll send you my propagation map at 2m. I'm at 675'. About 1/4 a mile to the south I'm looking at a 1400' ridge. About 3/4 a mile to the north, about the same. To the east gets to 2400' within 5 miles. To the west gets even higher at 7 miles.

Even Jeff L says I'm essentually screwed. If you want to set up a radio telescope with lots of earth shielding, I'm in a really good place...

If you're in the hills you might check out ba.mountain-folk if you don't already.

[Dropping into requirements/scope mode]

I am specifically looking for the reporting downlinks from the traffic
and news aircraft.

From whatever organizations that have them up.

I am not interested in the air traffic control aspects.

[back to discussion mode]

Why do I care? Primarily because my dad asked, secondly because it would
be cool to hear them.

Why don't I scan them out for myself? My normal commute makes Hwy 17 and
9 look like an oval racetrack. That said, I probably *will* do some
limit scans when I'm down in the flat lands.

Most of the net information I've been able to locate is dated enough
years back that I thought I'd ask if anybody had current knowledge.
(And I'll post whatever my direct results are too...)

The way you asked this question, it sounds like you
are asking for the Air Traffic Control (ATC) frequencies
for you local airport.

If you are looking for Bay Area (BA) news-media frequencies,
you could ask over at the ba.broadcast newsgroup.
news:ba.broadcast

Program your radio to search between 450.03125 - 450.61875 MHz
and 455.03125 - 455.61875 MHz in 6.25Khz increments.

To start your own frequency search, click here:

FCC database: Advanced License Search
http://wireless2.fcc.gov/UlsApp/UlsSearch/searchAdvanced.jsp

Pick the "Broadcast Auxilliary" service group,
then choose a radio service:

AB - Aural Microwave Booster
AI - Aural Intercity Relay
AS - Aural Studio Transmitter Link
CT - Local Television Transmission
LP - Broadcast Auxiliary Low Power
LV - Low Power Wireless Assist Video Devices
RP - Broadcast Auxiliary Remote Pickup

Source record: 20226

Not sure if anyone can help or can forward me to help, but here goes.

Someone gave me a free (old) Cobra SR 925 home base scanner. The instruction book says it's from 1987. It scans great, has wonderful clear sound, nice features & was free, but it has a problem.

When you switch it on & hold the button in, the speaker works. When you let go of the button, the speaker cuts out to silence. Only when you hold the button down, does it make noise. Also, the button does not spring back.

I figure it just needs a new switch, but where can I get one installed? I took the cover off & the switch is directly sealed to a chipboard (no screws or plugs to undo), so I did not mess with it.

I would like to fix it, because it has crystal clear sound & I am from an area with no trunking systems. Just a few locals, so I really don't want to get a new one.

Any online places I can mail to for repair? I figure since it was free, any repair would be little money to spare. I am going to try Radio Shack tomorrow, but thought I would check with the group first.

Thanks!
Walrus

Hey Everyone,

I have a Radio Shack PRO-90 on ebay for auction. This is my personal scanner that I have had for several years now. It is in great condition and includes some extras like a nice leather case and an extended range antenna. For more info on the scanner go to the auction @ http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=5703423766

Thanks,

M. Prindle

You can try here http://www.iinc.com/ggcomm/repinfo.html - They might have
the part you need.
Might also try blasting the whole area with some electronic parts cleaner.

Sorry - I am unable to read pdf files because my Acrobat keeps crashing.
If, as you say, the activity in your area is trunked, you will have a hard
time monitoring it. But if the 100XLT tunes 800mHz, you can monitor the
trunked frequencies - but the scanner won't track the conversations as they
jump from one freq to another at random.

You can email me if you want - maybe I can help you find some useful
frequencies. I live in Lakeland.

>
>Kingfish

$150.00-$200.00 seems to be the going price for an FRG 9600 without the optional video board. One with the video board installed recently sold for $250.00 on eBay.

The price of the FRG 9600 has fallen quite a bit in the past few years. I own two of these receivers and purchased both of them about 4-5 years ago: the unit with the video board installed cost $375.00, and the unit without the board cost $250.00.
If you tried to sell an FRG 9600 for those prices nowadays, the reaction you would get from most scanner buffs is "are you crazy?" The FRG 9600 is fast becoming obsolete in the age of digital trunked radio signals.

For what it's worth, I use my FRG's mostly for monitoring distant FM broadcast stations and military aircraft. I find that the receiver has very good to excellent sensitivity in both frequency ranges. In the VHF/UHF ranges the sensitivity seems to be about equal to most of my Radio Shack scanners, i.e. PRO-2006 and PRO-2056. One caveat about the FRG 9600, though: the internal speaker on some units has a tendency to create feed back inside the metal cabinet at high volume levels, so an external speaker may be necessary for the best audio.

73,
David

Hello,

Not only is it a slightly misleading title for the web site in my opinion
(no doubt you will get some hits from search engines), but after clicking on
the correct link which is
http://www.tetrascanner.com/icom-r20-modifications.html
NONE of the stuff you mentioned is available from YOUR site unless you own
the ones you redirect people to.
The introduction makes people redirect to www.javiation.co.uk
The user manual is on www.javiation.co.uk
Specifications redirects people to www.icom.co.jp
Software redirects to www.icomamerica.com

So there is NO content of your own really is there!

I can't see why ANYONE would waste their money on a scanner anyway, there is
nothing to listen to and everything will be digital fairly soon.

there is plenty to listen too,never in history of scanning has there been so much.

all digital rubbish,police yes

fire and ambo a long way off,but then pmr users at sites and events will keep you up with whats happening

find another hobby if you really cant find anything to listen to,leave scanning to those who enjoy it and find more and more every day.

"tinny."

Well...it *is* a small speaker. You're not going to get much bass out of something that small. But the biggest "problem" is it is not very loud. Hey, it's only running on 3v and there is a lot of electronics to run (compared to your average AM/FM radio) and did I say it was SMALL .. so don't expect much "audio" wise.

But I think it's a great little radio and would not get rid of mine.

131. Fair Price for a AOR 1000?

Newsgroup: rec.radio.scanner
Date: 2004-06-06 23:55:42 UTC
From: David <dbmartin5@comcast.net>
Message-ID: <ekb7c0tmm5rcas10et4oikuo0j21l9ell3@4ax.com>
Source record: 20246

I am looking for the fair price for a used AOR 1000 scanner. As this is an old model, I can not find any info online. This was one the scanner with full coverage (0.5-1300 MHz), eg. no gaps.

Thanks.

132. Yupiteru MVT5000 or MVT6000 schematic wanted

137. RDS radio and PC

Newsgroup: rec.radio.scanner
Date: 2004-06-07 11:17:37 UTC
From: temp@vhfdx.net
Message-ID: <3f5608cb.0406070317.e0adb12@posting.google.com>
Source record: 20152

I'm looking for either a PC card radio receiver or an external FM receiver which can be connected to the computer in order to process the RDS data, specially the station ID.

I'm involved in a project for automatic detection of propagation conditions on the VHF bands and what I need is a receiver that can be fully controlled by the computer, scanning continuosly, identifying the stations received, and logging them in a database for later analysis.

I'm a software developer, so I'll make any required programming in the PC, but the problem is I can't find any reference to a receiver which fits my needs (interface with PC and RDS compatible). Can someone help me?

Thanks. Gabriel.

For auction on Ebay:

Really low price on a Radio Shack Realistic PRO-26. This is a 25MHz to 1.3 GHz full coverage hand held scanner. Excellent cosmetic, electronic and mechanical condition, works perfectly, in box, runs for hours and hours on 4 regular or rehcargeable AA batteries, no reserve, currently at only $20!!

Loaded with features and no-gap coverage.

Take a quick look here:

Message-ID: <a059c053q4mapgeq1hefr31ga4qjnatqqc@4ax.com>
Source record: 20154

I recently was looking into getting a police scanner and I was told not to buy anything but one with digital capabilities since my county has already switched over. If I bought an older model, I wouldnt hear everything I wanted to. However, looking at radio shack (not sure where else to look) the only ones I saw were $370 and $500. Plus, in the store they said they only had the $500 one.

Is there no less expensive solution? What would happen if I were to buy one of the older non-digital ones?

>able to hear something.

Hamilton County, Ohio.

I called Radio Shack...like I said I didnt know who else would sell
them around here. I really dont want to spend much because at this
point it's a mere interest. I saw one for 100 bucks...looked very
basic...but if it worked, it would probably be enough for me...at
least in this stage in the game.

Here's the one I was looking at:
http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&category%5Fname=CTLG%5F008%5F009
%5F010%5F005&product%5Fid=20%2D424

OR this one that also picks up higher frequencies:
http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&category%5Fname=CTLG%5F008%5F009
%5F010%5F003&product%5Fid=20%2D524

What do you think?

>
> What do you think?

Hamilton County is already on 9600 baud digital except for fire dispatch,
which still uses 33.90 mHz. The City of Cininnati is still on UHF, which can
be picked by any scanner. They will soon move to a digital system. They
would have already moved but are delaying the move until they set up a 9600
baud system that's compatible with Hamiltion county. There are still other
cities in Hamilton County like Sharonville, Reading, and Norwood that can be
listened to on a conventional scanner. The PRO 2018 is not completely
worthless in Hamilton County so spending a hundred bucks on that and
listening to what's still available might be a good start to see if you
really like the hobby. If so, at some point you're going to have shell out
for a digital scanner since all of Hamiltion will eventually end up on
digital. If nothing else, the 2018 will always be good for weather alerts.

Regards, Jim

Hi Axl,
I own a Pro-93 (same as Pro-95, but with less memory) from radio shack, and absolutely love it. A friend bought a Pro-94 (one of the ones you linked to), so I programed it for him and taught him how to use it. the Pro-94 is a good scanner, but it lacks the ability to put text tags on frequencies and talkgroups, leaving you to have to memorize what you're listening to. It's a feature I use every day. Just my $.02, but if you're looking at a Pro-94, look seriously at a Pro-93 (if you can find one) or a Pro-95.

I'd love to buy a Pro-96 (pretty much like my scanner, but with digital decoding). I just can't justify the price right now either. I'm in Columbus, and the county (which includes Columbus police and fire) is still on an analog motorola type II system.

The Ohio Highway Patrol on the other hand has gone digital, so I can't pick up their coms. As soon as Franklin County goes digital (slated for the next

few years, if I remember right) I'll be forced to upgrade.

Yeah but at least those 2 years or so will allow the price of the
digitals to go down. I think I might pick up a 94 tonight...or maybe
even one of the lower 100 dollar models with like the 200 channels.
I'll see.

Great scanner - I've had mine for over a decade with no problems.
I'd say upwards of $200 would be reasonable.

Used this extensively for Acars and general listening. Still have manual and antenna. Antenna is somewhat bent but I had the rig hooked to a discone in the attic so I never used the little antenna. Making room for cw ham gear. Will sell for 150.00 plus discone (with coax) if you want it. One of the elements is bent but it looks and works great.

157. FS: Wavecom w41pc RTTY Decoder Package!

Newsgroup: rec.radio.scanner
Date: 2004-06-08 03:23:06 UTC
From: Chuck Yarbrough <wampus@nc.rr.com>
Message-ID: <u7cac0lams63fsjesk9qhfoftbgvovrfml@4ax.com>
Source record: 20172

Hi all--I am selling my Wavecom w41pc (not MKII) rtty decoder card package. It includes the ISA w41pc decoder card, Diskettes with v.4.4.0.0 software, a CD with the latest version 5.6, and the official Wavecom User's Manual in the original Wavecom binder. It also has the original factory checklist from Wavecom certifying that the card has passed all tests.

This is a VERY high-end and rare decoder (especially to find it in the US). It also costs approximately $4900 if you bought it from Wavecom. I am asking $1400 for the whole package shipped CONUS. Other locations need to inquire about shipping to your QTH.

While this is the original w41pc card, and not the current Mark II, Wavecom software works the same on both. The MkII added a descriminator output jack on the card and also shrunk the card a bit. Functionally the original and the MkII work the same (same modes, analysis, etc).

Please see the Wavecom website for further details.
http://www.wavecom.ch/products.htm .

By the way, Wavecom provides FREE web downloads of upgrades in its software. Your decoder will stay current for a long time!

Please respond to me off list at wampus@nc.rr.com.

THanks
Chuck KI4BZJ

Your right about that - I personally wouldn't have a problem paying $200 for
a .5-1300 mhz full coverage 1000 memory channel scanner.
They were top of the line for years - And it was about the only one you could
get with military band coverage for a longggg time - And til this day not
much seperates it from the top of the line now,except bells and whistles like
digital S meters,timers,SSB ect.
Of course theres the age factor - But they seem to hold up very well in that
regards,with the excpetion of the keypad eventually going bad - A problem
which pretty much afflicts all keypad devices eventually.
$100 sounds more like a garage sale price - I'd guarantee he'd get more than
that on ebay.

Bout the DVD's yeah that happens more than folks realise - Alot of walmart
crap is damn near close to wholesale - So people can use that to their
advantage.
He should save up his money and buy them wholesale himself for even better
profit.
Personally I stay away from walmart as much as I can,going maybe a few times
a year.
They have grown far too big,at the cost of everyone else,and a dollar spent
with them is 50 cents in a china mans pocket.

You have three choices: Pro-96, Uniden BC296D, and a Uniden BC796D. The
original Uniden digital scanners will not worth with Hamilton County's
system.

I use the 296D on Austin's system and it works great.

I swung by radio shack and got the PRO-95.
(http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&category%5Fname=CTLG%5F008%5F009%5F010%5F003&product%5Fid=20%2D525)

I havent had much time to mess with it yet, but my friend and I did
manage to get the cincinnati police freqs programed in and we scanned
those tonight.

We used www.cincinnatipolice.com which had the freqs listed and we
also were checking out www.cityfreq.com.

Now I live in a small town called Lockland, and I noticed for theirs,
on this other site, http://home.fuse.net/rwtrue00/Ohio.htm, if you
scroll down just a little bit, you'll see it's one of many dispatched
by hamilton county. There are freqs listed under that and it mentions
theyre on a trunked system. Does that mean the users of those freqs
all share and when they transmit it just uses any one of those open
frequencies? If so, im unsure on how to program this scanner for that,
because on the same page it also mentions talkgroups, and I was
wondering about those too.

We flipped through the manual but it's still a bit confusing. :)

Any simplified help is appreciated!

well, 99 percent of the rest of the world said that it does indeed say that.
and that it does indeed allow arrests of Ameicans without the authorrities
obtaining warrants.

But I guess that 99 percent of the rest of the world just hates us Americans,
since The Patriot Act doesn't say that and doesn't allow that.to happen like
the rest of the world claims that it does.

So far, the only posts I have seen that claim that it doesn't say that are all
from the U.S.

Almost all the posts I see from the rest of the world (if not all of the posts
from the rest of the world) say that it does say that and does allow that to
happen.

>Guess I'm not going to get much out of my freebee scanner.

you might still get a lot out of your freebie scanner. Just not some of the stuff that you thought you might get.

The standard scanner bands still have activity on them.

You might not get police or such if your area has awitched to 800 mhz or digital or a combination.

But you might get other stuff on your freebie scanner, such as railroads, airplanes, businesses, etcetera.

You might even get policre from neighboring counties or something.

The police in my area have switched to digital 800 mhz many years ago. I only have an analog scanner, and I have still found stuff to listen to on it.

If your scanner gets between 118 MHZ and 135.995 MHZ, search in that range to hear airplanes and airports.

If you search between 450 MHZ and 470 MHZ, you might hear businesses and maybe even some fast food drive throughs. (although fast food drive throughs are very very boring to listen to).

In my area, I have found some sort of school security police. who arrested several of their students. 9'th graders and 12'th graers. (and is frequently transmitting such activity).

I wonder what kind of school that is?

I useed to be able to do the same thing with a regular AM radio.

The drive-in movie theatre that was around here at the time broadcast their movie sound over the regular AM broadcast band (with very low power) so that you could hear the movie on your car radio (after all, some people destroy some of the drive-in speakers).

The result was that I was able to hear the movie on a regular AM radio while at a nearby restaurant.

It varies from state to state, and enforcement varies from locality
to locality.

Some states have 'exemptions' that may include HAMs, or even
anyone with a 'valid' reason.

And enforcement in some states even tries to set their own standard...

Get LOCAL advice before you procede. Not just the letter of the
law, but the 'real story' about what is going on with regard to enforcement
and/or harassment.

That was available around here too for a while. One drive in actually
broadcast
AM Stereo! They had just put in FM Stereo when they folded up.

I remember somewhere the system used coaxial cables that had 'holes'
stripped
in it for a specific amount of RF leakage as opposed to putting up antennas
that
would beam a signal, possibly way to far.

I recently got my CDL license and am thinking of taking an over the road job. I've been a scanner for years, but never looked into the laws. I've heard that Michigan has very tough anti-scanner laws. Does anybody have any inside into other state's laws. Do these laws differentiate between a handheld scanner and a mobile scanner?

Perhaps there is a web site dedicated to this very question.

I am selling my MINT condition Radio Shack Pro-2035
1000 channel base scanner. This is the Euro version, totally uncut .
Includes Radio Shack AC adaptor for use in USA.

I will accept a US Postal money order or PAYPAL which will get it shipped
immediately. I will also accept a personal check, but will wait until it
clears before shipping.

I will ship via UPS, ground, insured.

$300.00 shipped.

Check my eBay feedback under OFFDAN. Reply via e-mail ONLY if interested

Dan

>Do these laws differentiate between a
>handheld scanner and a mobile scanner?

I don't know. I do know that several people in the shortwave and cscanner newsgroups consider the R3 as "NOT a scanner", even though under the legal definition of the legal U.S. laws, it is legally considered "scanner".

The U.S. laws define whether a radio is a scanner or not by how many channels it has and how fast it scans through them, plus I think maybe a few other things also.

Legally, the IC-R3 "is a scanner".

183. Re: Mobile scanner laws

Newsgroup: rec.radio.scanner

Source record: 20198

Despite many people saying that the IC-R3 "is only a communications receiver and is NOT a scanner", under U.S. law, it IS legally "a scanner".

The number of channels it has, frequencies it covers, and how fast it scans between the channels maake it so.

I just can't remember any of the websites that listed the laws, but they were posted here at least once by someone.

Wish I could help ya but those things are incredibly hard to find. I bought mine (preassembled) years & years ago from "The edge company"... they ,of course no longer sell them. If i had known how valuable they were going to be I would have bought a bunch of em instead of just one! Seems that the origional makers of the highway zapper were kindly threatened by the FCC to stop making them.
Here is a pic of one you can use to post on other forums to aid in your search.
[img]http://img11.imageshack.us/img11/225/zapper1.jpg[/img]
[img]http://img11.imageshack.us/img11/4012/zapper2.jpg[/img]

And here is the one I own. It has seen much use over the years.
[img]http://img11.imageshack.us/img11/7449/zapper.jpg[/img]
I had to modify the switch because I didnt like the pushbutton switch.

If the above pics dont work then just type in the url into your address bar on your browser.

I wish you luck!

I have recently heard a Canadian weather station on 162.400 MHZ. However, the frequency that they said they were on was completely different. The station's call letters ended with the word "zed".

I'm not sure if they meant that Z was the last letter of their calls, or that "zed" was the last letters of their call.

193. Air Force One callsign when not AF1?

I keep hearing that "Air Force One" will be carrying Pres. Reagan's casket between California and Washington, D.C., but it won't really be using that callsign, will it? Won't it just be "Air Force 28000" (or 29000)?

If anyone hears it on Wednesday or Friday, please post a followup to this query. I'm not in its flight path so won't be able to listen for it myself.

Patty

> (or 29000)?

By definition any airplane with the president of the U.S. on board uses
the callsign "Air Force One".

The "flying office" of the president is called Air Force One, but it does not
use that callsign when the president is not in it. I assume they have real
callsigns, (there are two of them) not just 28000 and 29000.

However N28000 used to be registered to someone else.

I'm sure they have callsigns besides Air Force One that they use when they
don't want to announce their presence, Let's face it, "Bagdad tower, this
is Air Force One, 25 miles out at 10,000 feet on course 180.",
is not something they would want to say over unencrypted VHF radio.

Geoff.

It may use the designation SAM 28000 (Special Air Mission).

It may be possible to hear the flight on VHF and/or UHF ATC frequencies.
I'll be listening on 11175 USB myself.

ABC News is reporting that President Reagan's body will be flown on Air Force One (though I doubt that callsign will be used, it is always a possibility) to Washington today via the Pt. Mugu Naval Air Station which is near Oxnard, CA.

It was reported ealier that the aircraft will be tail #28000.

Probably the result of temperature inversion ducting.

Where I live (Tonawanda, NY - along the Niagara River between Buffalo and Niagara Falls) we get ducting all summer long here due to our proximity to Lake Erie and Lake Ontario. It's not unheard of for hams in Cleveland to get into the Buffalo repeaters with 5-watt handhelds. We also hear Coastguard Canada from up in Sarnia (across from Michigan) on marine Ch. 16 down here quite a bit, low band fire calls on 46 megs from Watertown and the Finger Lakes region, Rochester Fire booming in loud and clear in Buffalo 75 miles or so away, etc.

What usually happens here in Western NY is that when it's hot out during the summer, the air is so much warmer than the water in the lakes that once it gets dark out, a layer of cooler air forms along the lake front and starts moving inland. In addition to patchy ground fog (grin), this also produces a temperature inversion that can duct VHF signals for hundreds of miles. The effect is more pronounced at 40-50 MHz than it is at 160 MHz, but with Lake Ontario it has even ducted signals on 440 MHz for 75-100 miles.

Lately, I've noticed that at times in the local spring, we've had a few instances where the inversion occurs because the water is warmer than the air and a layer of warmer air forms and moves inland. With your proximity to the ocean - which is a hell of a lot bigger than any lake - I'm not at all surprised that you would observe this phenomenon up there a well.

Enjoy the chance to log some stuff you wouldn't normally find within range of your receivers. If you run CTCSS on your scanners, you might want to disable it and see what you can pull in on other frequencies, you might find some other surprises in store for you, too.

The actual aircraft used is reportedly going to be #28000.

>It may use the designation SAM 28000 (Special Air Mission).

Bingo. That, or "Executive One" though I would expect the use of the
SAM callsign under the circumstances.

>It may be possible to hear the flight on VHF and/or UHF ATC frequencies.
>I'll be listening on 11175 USB myself.

Don't forget the HF aero MWARA and LDOC freqs, as well as the Mystic
Star frequencies (the ones with the FOXTROT designators).

Yes, I know. That's why I don't think the plane will actually be
using the callsign AF1 despite news reports to that effect, and
therefore why I posted my query.

I live near Moffett Field and have heard the planes come in under
the AF1 callsign numerous times. Part of the final approach that
a 747 takes to Moffett is easy for me to see, so I usually run
outside with the binocs when it happens. One of the shuttle carrier
747s was in town for the airshow recently, but I missed its entrance
and exit. Should've left the 2010 on more. :-)

And Steve (in another posting), you're right--it is 28000. I'm
seeing some live shots of it on the ground at Point Mugu.

Yes, and Peter Jennings referred to it as Special Air Mission 28000.

what do you mean by duplex?

a mobile phone is duplex:

i'e it transmits on one freq
&
receives on another

both at the same time.

so two receivers are necessary..

mike

Anybody have any comments on this radio? I want to set up a few of them to monitor local pd and fire non digital in the 470 Mhz partition. This radio has no provision to program in a pl tone and was wondering if I might have a problem with intermod in the Los Angeles area?

Also was considering the previous model Bct7 but it has no keypad.

Duplex simply means it is a repeater, that has an input and output (RX and TX), as where simplex is a direct transmission, not using a repeater. You can of course hear duplex or simplex with any scanner.

I am selling my MINT condition Radio Shack Pro-2035
1000 channel base scanner. This is the Euro version, totally uncut .
Includes Radio Shack AC adaptor for use in USA.

I will accept a US Postal money order or PAYPAL which will get it shipped
immediately. I will also accept a personal check, but will wait until it
clears before shipping.

I will ship via UPS, ground, insured.

$175.00 shipped. E-mail only if interested

A simple reply along the lines of " Hey Dan, your price is a bit high, check eBay pricing, etc., you may want to re-consider" would have sufficed.

However, I was pleased to see the usual BAFFOONS on usenet are still around. Now I know why I and MANY others have left USENET for FAR greener pastures.

Heck, still a good spot to post equipment before it's off to eBay...actually, that's ALL it's good for.

Cool down here is the confusion:
Those couldn't be modified or (un-blocked) by cutting in the first place,
they were manufactured after the ECPA amendments
However some early Euro models have a CPU that cover US and USA cellular
bands stock. If that 2035 DOES its worth some $$$$$$ as apposed to the US
model not worth much.
Is the cellular band blocked or open ?

Anyone know where you can download a good free scanner program? I see these ones like Winscan for $50, but don't know if they are worth it. I would like a free one.

I have the BC895XLT from Uniden.

Thanks!
Walrus

I was able to do that the other day as here near the Cleveland area, I heard a Canadian weather station on 162.400 mhz.

I uisually don't get any stations at all on that frequency.

: Do these laws differentiate between a
: handheld scanner and a mobile scanner?

Yes, I think some states do, but I can't rmeember where. I think that having a scanner that is not "installed" in the vehicle (ie. a handheld) is OK, but an "installed" scanner is not. But there are places that don't allow either :-(

Again, the laws vary from place to place.

231. can space shuttle video be recieved on the IC-R3???

Newsgroup: rec.radio.scanner
Date: 2004-06-10 01:18:18 UTC
From: mediaguy500@wmconnect.com
Message-ID: <20040609211818.16591.00000788@mb-m15.wmconnect.com>
Source record: 20146

The space shuttle video S band frequency is listed as being on 2250.000 mhz (which the IC-R3 covers).

However, according to the websites, it seems that the S band video feed is digital and encrypted (which the R3 can't decode) even though the C band feed is analog and unencrypted. (however, the R3 doesn't recieve C band).

Unless I misunderstoof the website and the S band feed is in the clear. However, to me, the websites seemed to suggest that the S band feed is not in the clearr, but is encrypted.

so the next time the orbiter is orbiting, if any of you R3 owners want to try it, you now know the listed frequency for it.

try it in FM-TV mode.

I haven't tried it myself, yet.

Interesting thread! Although I'm slightly OT - what is the current
designation of the Presidential Limo when the Commander and Chief is aboard?

Surely, it's no longer the SFX100, (poor memory) or one of those Kennedy
years callsigns? Also, from the pix I've seen of Presidential Motorcades,
there are tons of big, black Chevy Blazers doing escort and the Prez Limo
itself seems to have few antennas. Again, I'm only going from memory - but
has anyone heard a 'sitting' President or support crew tx'ing from the
actual limo?

During some G-4 conferences here in Canada, I've been told some CSIS and SS
comms have been heard. But, nothing 'heavy', just things like: "Position of
#1 is secure"...or "Escort #2, reply on channel 3". (Of course, channel "3"
was encrypted and unlistenable) A good thing considering our recent history
of terrorism.

Anyway, just wondering...

As stated in my original post, it is a Euro version, totally uncut. Out silly ECPA laws DO NOT and DID NOT apply in Europe when Radio Shack made this radio.

I will probably put it on eBay or just keep it.

You may want to go the hardware route! Whit a Uniden BCT-8 trunker
pre programmed scanner that has ALL the state's frequencies programmed
in and you can also program it to do trunking.
This is a novice radio and ALL the state's police frequencies will show
up
not just the State Police / High way Patrol. You can start locking out
the
city frequencies but it's tough to pick out the different users!

However many locations are going to APCO P-25 digital systems.
A BC-796D or the PRO-96 would be better scanner radios to work most
of the country,
you would have to program the radio your self but this would give much
better
coverage!

Ge the software for the above scanners and make up files for each
region of the country. Several of the larger states may take two or more

files to cover all there high way systems. And two or more of the less
populated
states may fit into one (1) bank

After traveling through a region and manually programming,
deleting and adding the High Way Patrol / State Police systems you
would over
a years time get a great set of files that will work for you in the
coming years!
Again look at strongsignals.net for much more information on these
radios,
they have there own message boards!

State's like Pennsylvania which uses M/A Conmm's "Open Sky ®"
or other digital formats will not work with the digital scanners.
While Connecticut State Police are using a 800 MHz Motorola trunked
APCO
digital system that is trunk tracked very nicely with the digital
scanners!

Join either of the following Yahoo groups:

http://groups.yahoo.com/group/BC895/

http://groups.yahoo.com/group/BC895XLT/

Once you're enrolled, go to their 'files' section and download PC895.
It's the grandfather of Winscan; doesn't have nearly all the features
but more than enough to get you going.

The cable you'll need is quite wierd; the links section has a link to
the 895 FAQ that tells you quite a bit about the needed cable, and where
you can get pre made cables, or DB9 adaptors. Several of those links
also exist in the 'links' folder in each of those Yahoo groups.

Just wanted to say something about the limo part. My sister drove a limo
for Bush in Columbus Ohio once and it was a rented limo. I would imagine
that those antennas didnt really have anything to do with the SS. Its
kinda cool having a picture of your sis with the "THE MAN" :)

p.s. I'm talking about only the space shuttle video that is transmitted on 2250.000 mhz.

can that be recieved in the clear on the R3?

I know that I'll only get it when the shuttle's directly over my location IF I can get it at all.

Unfortunately, there seems to not be any ham tv repeaters in my area, nor any ham tv transmissions in my area at all.

But even if there were, there's still nothing quite like recieving the space shuttle video directly on it's own frequency.

(Just like NASA dooes).

> Fred Burgess

Full duplex is where you can both speak and hear AT the same time
(like a telephone).

Half duplex is one direction at a time.

Simplex is both sides of the conversation on the same frequency.

Both repeater conversations and "simplex" conversations are _half
duplex_.

Unless a scanner has two receivers, one cannot hear _full_ duplex on it
(because it involves potential traffic on two different frequencies at
once. (unless you want to talk about sidetone and mean nasty things
like that...))

-D
http://www.m-w.com/cgi-bin/dictionary?book=Dictionary&va=duplex
2 : allowing telecommunication in opposite directions simultaneously

"http://www.m-w.com/cgi-bin/dictionary?book=Dictionary&va=half%20duplex"
a mode of communication especially with a computer via telephone line in
which information can be sent in only one direction at a time

I have a BCT7 & enjoy using it in my truck. The 7 isn't trunking, for a few bucks more I'd definitely get the 8. The 7 is a pain to use at night (u can't see anything) - but isn't bad to program. I took the case off and mounted it in my dash, under the radio (fits perfectly). Does anyone know if the BCT8 is the same size as the BCT7?

I don't have to guess where I come from but then I don't try to pretend I'm posting from a Mossad e-mail address. You're from a country with a negative population growth, a 2% net out migration rate, an average income of 8,000 Euros, an average life expectency of 65 years for males, and your main export is wood. The population of Latvia is about 1/3 that of Los Angeles County. Your country is still run by the same communists who were in power in 1991 but changed their party name and you've had 9 different governments since 1993. You've probably never been to the US in your life (I've been to Riga) and everything you know about us you get from TV and the internet. From this, you know WE live in a police state from reading a scanner newsgroup?

You were saying morons came from where....?

Very true Tom....

However, most scanner afficionados worth there salt prefer the Euro version radios uncut NOT for the cell calls, but for the damage to OTHER bands NOT done in an attempt to comply with the FCC here in the US.

This is common in many scanners where entire sections of other bands are deleted in an attempt to placate the FCC, and comply with this silly ECPA nonsense.

BTW, that entire legislation was made obsolete by digital technology, which is what should have been done to begin with.

That is why I purchase any new receiver / scanner from JAVIATION if at all possible.

And that is why a Euro version ANYTHING is valuable and worth more money then a US version radio.

LOL... are you for real?.... I am not trying to hide! If you had
something better at reading your newsgroups then just OutlookExpress then
maybe you would see more then this:

From: silver <silv3r@REMOVEinbox.lv> <---this is my web email address.
Just like yours comes from yahoo.com. But you don't post from Yahoo do
you?

Organization: Hamossad <www.mohr.gov.il> <---anyone can put anything in
their headers like this. You can remove this if you wanted, along with
other parts of your header. Here is something I also added:

reset-NT-admin-password-tool: http://home.eunet.no/~pnordahl/ntpasswd/

Also if you knew how to read rest of the headers you would be slow to
make yourself look very foolish (i hope).

Get yourself a better NewsReader then you wouldn't have this problem.

No I know from being in the US, and reading the Gov't Doc's (bills/laws)
that come out.
Some of my family are in the US Military, and one works in VA for your CIA
(30+ years now). But you know what..... your country is becoming more and
more a Police State, and you can't see it; just like you can see where I
come from.

> You were saying morons came from where....?

Your parents?! If you still think I live in Latvia because of my email
address, you have to be the most unlearned person (on headers) I met so far
on the internet. Learn how to read headers.

These are yours:

I was under the impression that European laws restricted listening to
certain frequencies even more stringently than the FCC...at least that was
the case when I was in Germany in the mid-80's.

of coure you can, if you're close enough to both transmitting parties.

Just program the 2 or 4 frequencies into your scanner right next to each other.

at least, that's my understanding of it.

262. Re: listen to duplex communications ??

oops! my mistake. I just realized you meant "full" duplex, where both parties are talking at the same time.

You are indeed correct that you can not hear that on a scanner.

You can only hear part of it on a scanner.

Hey Everyone,

I have a Radio Shack PRO-90 on ebay for auction. This is my personal scanner that I have had for several years now. It is in great condition and includes some extras like a nice leather case and an extended range antenna. For more info on the scanner go to the auction @ http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=5703423766. The auction ends in about three hours and the bid is below $60.

Thanks,

M. Prindle

> what frequency range is in ther 2 meter area.

2 Meters (144-148 MHz):

144.00-144.05 EME (CW)
144.05-144.10 General CW and weak signals
144.10-144.20 EME and weak-signal SSB
144.200 National calling frequency
144.200-144.275 General SSB operation
144.275-144.300 Propagation beacons
144.30-144.50 New OSCAR subband
144.50-144.60 Linear translator inputs
144.60-144.90 FM repeater inputs
144.90-145.10 Weak signal and FM simplex
(145.01,03,05,07,09 are widely used for packet)
145.10-145.20 Linear translator outputs
145.20-145.50 FM repeater outputs
145.50-145.80 Miscellaneous and experimental modes
145.80-146.00 OSCAR subband
146.01-146.37 Repeater inputs
146.40-146.58 Simplex
146.52 National Simplex Calling Frequency
146.61-146.97 Repeater outputs
147.00-147.39 Repeater outputs
147.42-147.57 Simplex
147.60-147.99 Repeater inputs

Notes: The frequency 146.40 MHz is used in some areas as
a repeater input. This band plan has been proposed by the
ARRL VHF-UHF Advisory Committee.

The cost to ship can be more than the item is worth sometimes. (large
radios)
There is much more paperwork to deal with also. Most eBay shippers I've
talked to is worth the reward.

You know what the much other paperwork is.. a little green or white form
that takes about a minute to fill out. Most ebay sellers won't ship outside
the continental US, because they won't ship USPS. FedEx and UPS are a total
ripoff once you get outside the lower 48..

Brenda I agree on that but if you want a package tracked there is no better way to go. USPS just does not have their act together here.

BTW you must also do a bill of sale on most items for customs. We had to do these when shipping into MX and SA even though the value was zeroed out on our test equipment for work. This was through Fedex.

What are the chances nowadays for an order to get intercepted by 'customs' or whomever? I'm looking to get the smallest available scanner, unblocked. I can't remember the name of the make/model of one I saw recently, but it looked like a 'solid', well made unit.

Yeah, but if you become a familiar face to law enforcement at car accidents, shootings and fires, that may change. use discrection.

274. very irronic: cell phone eavesdropping & old tv sets

Newsgroup: rec.radio.scanner
Date: 2004-06-11 06:43:27 UTC
From: mediaguy500@wmconnect.com
Message-ID: <20040611024327.11585.00000891@mb-m04.wmconnect.com>
Source record: 20089

The news here recently said that 50 percent of the people still have only over the air tv with an antenna (no cable tv and no satellite dishes).

me: If tthey all happen to have tv sets that go up to UIHF channel 83, then when all over the air analog tv broadcasting stops in 2006 as Congress mandated it must by law, how many of those people do you think will tune to EVERY channel on their tv set in a futile attempt to find an analog tv station broadcasting only to find out that they can hear cell phones on their tv sets!! and then to further find out that the ONLY thing that their old tv sets are good for picking up off the air IS cellular telephone calls.

That's right. Most all of the people in the HDTV newsgroups and elsewhere were and are wrong when they said that the old analog tv sets wil be obsolete and completely useless when analog tv broadcasting stops, and won't pick up any transmissions anymore in a watchable or listenable format.

The truth is, if it goes up to UHF channel 83 (not to be confused with cable channel 83), they WILL still pick up analog cellular telephone calls.

However, it is illegal to listen to them in the U.S. which does make the tv sets useless legally.

The irony is that the ECPA got the law passed by Congress to prevent the general public from eavesdropping on cell phone calls. But I would say that most of the general public isn'tt aware of the ECPA law and isn't even aware that cell phones can be heard on old tv sets. And since 50 percent of the people still use only over the air tv for tv reception, when analog is shut off, I would say that a majority of them will be tuning through ALL of the channels on the tv sets.

The real irony here is that a device that was once meant for the general public to watch and listen to legally (analog tv sets that go up to UHF channel 83) will now be good ONLY for listening to cell phone calls and will therefore be illegal to use.

And probably illegal to even have since the ONLY thing they will be good for is for illegally eavesdropping on cell phone calls.

None of my tv sets get up to tv channel 83.

But I know some people who do have them.

So working tv sets that go that high up still exist in good condition, therefore making my points in this message valid.

275. Re: Waddington Air Show Freq?

Try this site:

<http://www.militaryairshows.co.uk/freq2.htm>

And Grove has a nice site

<http://www.grove-ent.com/>

ALSO
<http://www.monitoringtimes.com/>

click on " Annual MT Airshow Spectacular"

or look at "air show schedule"

Scroll down to the bottom under the frequencies for the US teams
and they have foreign air demonstration teams

Here's another air show frequency list:

<http://www.fordyce.org/scanning/scanning_info/airshofq.html>

Again scroll down to the foreign teams!

This site is mostly for american air show visitors

<http://www.airnav.com/>

And some air show sites
<http://www.airshows.org/>

<http://www.aero-pix.com/schedule/sched2004dt.htm>

<http://www.airshownetwork.com/home.html>

<http://www.airshowreport.com/>

If your radio has a SEARCH feature then do some snooping for new
frequencies while the air show is slow.

BRING EXTRA BATTERIES! there is noting worse than running the batteries
down in the radio or
camera just before the jet demonstration team goes up.

And a ear phone or head set plugged into the radio(s). I like to use a
set of "Walkman" light weight head phones.

I agree. A TV tuner has an extremely wide front end. If you were to hear any mobile phones they would have to be in a VERY close proximity, otherwise you would hear nothing but garble.

In Australia, all mobile phones have been digital for years (analogue was shutdown in 2000). If the US is not all digital by 2006 I would be quite surprised.

Hello to all,

I'm really new to all this and don't know much so I have some
questions:
-Is it possible to get in the us an unbloked aor 8200 III?
-which one is better, the 8200 or the Bearcat 296D?
-In the bercat I read APCO operation, What is this?
-does the 8200 needs trunk tracking to listen to police?

-what is the principle of cellular telephone listening (having an
unblocked scanner)?

Thanks a lot to all of you for your answers.

Dimitri

Principle of cell-phone is encrypted digital timeslot transmission.
There is no No NO scanner available for to listen to this in clear
speech. At best you will receive something like scratchy noise.
You must have direct access to the providers system for "background
listening".

It's actually four beeps. Anyone have any idea. According to the frequency list this frequency is reserved for the Army and soil conversion department.

283. Dr. Phil made me violate the ECPA law!!!

Newsgroup: rec.radio.scanner
Date: 2004-06-11 22:50:31 UTC
From: mediaguy500@wmconnect.com
Message-ID: <20040611185031.05452.00000840@mb-m17.wmconnect.com>
Source record: 20098

not that anyone really cares one way or the other *except for the people who actually got the ECPA law passed and the people who own and operate the cell phone companies),

I usually don't watch Dr. Phil today, but someone else at my house does. Today, Dr. Phil said that you should watch his show if you're a tv addict or a cell phone addict (always talking on the cell phone).

Well, I I kind of fit into the "tv addict" category, although I'm not really addicted to tv. I just used to watch a lot of it. I can stop any time. Actually, I already have pretty much since my own cable tv no longer comes in.

So I watched his show today. The first segments dealt with the guy who was a cell phone addict always talking on the cell phone and his wife wanted Dr. Phil to help her by getting him to stop always talking on the cell phone and to start talking to her instead.

Well during one of the segments, the guy's cell phone rang,

You could hear the caller talking. At first, the caller seemed to not know that what he was saying was being broadcast on national tv intended for the general public. until Dr. Phil told the caller that he was talking to Dr. Phil (either the guy's wife took the phone away from her husband and gave it to Dr. Phil or Dr. Phil took it away himself. I don't remember which).

Anyways, after the call was over, Dr. Phil said that he knew that the cell phone was going to ring (sometime during the show) (because the guy's wife said that he's always on it everywhere) so that he had his (producers??) find out the frequency of the cell phone in order to play it through the speakers (so that it could be heard on the tv show being watched by the general public).

Now, what's wrong with this picture?

Remember, federal law forbids the actual monitoring, the actual listening in to them no matter what frequency they're on. and the guy from South Dakota that posted in this newsgroup said that under South Dakota law, it does not matter that my intentions was to watch and listen to a different service that was a leegal servicve (regular tv intended for the general public) or that I was on frequencies intended for the general public(regular tv broadcast station). That under South Dakota law, it's still illegal period (even though I didn't expect it) and even though it came over regular tv frequencies.

(I'm sure most of the readers of this newsgroup know which thread I'm talking about that was posted in this newsgroup. The guy who claimed that the cops arrested him while he was listening to business frequencies because an image of a cell phone call came acrosss the business frequency.

Of course, Dr. Phil wasn't the only one who ever done this. I seem to remember news broadcasts broadcasting cell telephone calls also. although my memory is more vague on that since that was a longer time ago.

so what's really wrong with this picture?

just some stuff to think about.

In other words, everyone who was watching that episode of Dr. Phil today was violating the ECPA law by listening to the first part of that conversation. (if they were watching during that scene).

I'm assuming that it was completely legal as soon as the guy realized he was talking to Dr. Phil.

but then the ECPA might see it different as the law says the monitoring of cell phones, period, is illegal.

Since Dr. Phil was one of the parties talking on the phone, then under ECPA law, he did not break any laws at all,(and it is true, he did not break any laws) but his viewers at home watching on tv all did by listening to it!!!

Dr. Phil was indeed helping.

As I said, probably no one really cares one way or the other. (except the cellular telephone companies who want to assure everyone that their cell phone calls are completely safe from eavesdropping.

and by the way, for the people who say to guarantee your phone call can't be overheard, use a wired landline telephone. That doesn't work either as the other party you call or that called you might be using either a cellular telephone on their end or a cordless phone on their end even though you're using a wired landline telephone.

284. f/s brand new pro-96 $700 Canadian

I have for sale 1 brand new - in the box radio shack pro-96 digital scanner. Comes with everything a complete package does, 2 battery holders, belt clip, manuals, warrantee card, antenna, and I'm even throwing in a leather case for it. I bought this unit and waited for it to come via ups, in the mean time I went to the u.s. and bought one myself, the day I got home the original one came in. So I just opened it and turned it on to make sure it worked, brand new...no finger prints or anything, it does come with a set of fully charged batteries as well.
only $700 Canadian flat. that's $700 Canadian, if you live in Canada this is a great deal being as you won't have to pay $128 on taxes/duty/brokerage, $700 Canadian flat.
Please email off list to
dj.hyde@bmts.com

p.s. my post is not meant to be againdst Dr. Phil.

I like Dr. Phil. I have seen his show a few times and he helps people. I like Dr. Phil.

He is a good person, in my opinion.

As I posted before, I think most of the general public is completely unaware of the ECPA laws.

So in my opinion, I think that Dr. Phil was simply unaware of the ECPA laws, just like most of the rest of the public.

And as I said, he did not do anything wrong.

Under ECPA law, it's his viewers at home who are guilty.

but as I said,probably no one really cares one way or the other, as far as I know. except perhaps cell phone companies.

after all, it was regular tv, and similar shows, like newscasts and reality shows, do it all the time also.

This just happened to be the most recent in my memory as it happened today and got me to thinking.

I think I'm finally down to regularly watching only 2 tv shows per week now, both on the WB.

Thats totally bogus. You cannot predict what specific frequency a cell
phone will land on when it rings. No. 2 most cell phones,, especially in
larger cities are almost always digital so you cannot hear it anyway.
It was either coincidence, and Phil made it look like like he "knew"
it was going to happen, or No. 2 as I suspect it was a setup on "Dr.?")
Phils part. The only way you can truely intercept a cell call today is
to have the electronic serial number of the phone and some very
sophisticated equipment for intercepting and decoding the signal which
Phil aint got.

Jeff

> Thats totally bogus. You cannot predict what specific frequency a cell
>phone will land on when it rings

I forgot about that. I should change the subject title of this thread then as it is no longer a correct subject title.

Actually, right after I posted the first two messages in this thread, I decided I wanted to cancel them. but I didn't know how. so I looked it up. Instructions by people said to right click and cancel. that didn't work for me. There wasn't any cancel button on mine.

so I looked in my isp for instructions. Their online printed instructions said in order for me to cancel newsgroup messages that I posted that I have to send email to the screen name NewsMaster with the date, subject title, and message I.D. and that it should be done as soon as possible within 24 hours.

However, when I did that, it wouldn't accept the cancels and kept giving me an "error message" that said the problem was that that screennames emailbox was full.

So I finally called my isp in order to find out how I could cancel the 2 newsgroup messages I posted that I wanted cancelled.

And talk about bogus, they were of absolutely no help at all.

At first, a lady with some foreign accent answered. She said she needed my screen name, which I gave her. But she wasn't able to understand any of my screen name correctly even when I repeatedly spelled it out for her letter by letter like she asked me to.

(It was the first time I had called my current isp). After about five or seven tries of trying to get her to understand which letter was which, she hung up on me.

So I called back. This time some guy with a foreign accent answered (sonded like the same kind of foreign accent as her to me). Although he understood the words I said (unlike the first lady) he couldn't grasp any of the concepts.

He couldn't grasp that a "newsgroup" is NOT the same thing as a webpage. even though I tried to explain it to him once I realized he didn't understand what a "newsgroup" is.

He kept telling me that I have to contact the webmaster of the webpage rec.radio.scanner to get my posts deleted. even though I kept trying to explain to him that it was not a webpage and was a newsgroup without any webmaster.

he kept tellingg me to put www in front of rec.radio.scanner "to get to the newsgroup".

then after a five minute pause where I guess he went to ask someone else about it (who also obviously didn't know anything going by the next set of answers he gave me).

He thought that by "cancelling my last two posts" that I meant that I wanted to unsubscribe from the newsgroup rec.radio.scanner (which I don't want to).

I tried to explain to him that I meant deleting only the last two newsgroup posts I made. By that, he thought that I meant that I wanted to cancel the whole newsgroup rec.radio.scanner and told me that that couldn't be done because it wouldn't be fair to everyone else who reads it and wants to read it.

When I seemed to finally get him to understand I meantt cancelling only my last two newsgroup posts (although as I found out in a little bit, he still didn't understand it)., he told me it couldn't be done and thought that I was talking about a problem with the isp's software installed on my computer.

He told me the problem "will be fixed within 24 hours to 48 hours".

I then tried to explain to him that the instructions said the posts should be cancelled as soon as possible within 24 hours of the posts. And he said that couldn't be done. and once again said "the probnlem willbe fixed within 24 hours to 48 hours".

even though I wanted to cancel the posts before anyone else got them. Although since you already got them, it's too late for that.

anyways, until tonight, I never ever realized what morons are running my isp.

If I could afford it, I would switch isp's right now.

Actually, they're probably not morons. From the foreign accents, I would say that they probably just don't understand English very well, yet.

But all of the above is what happened. And I imagine that what will probably happen now as a result of my request to cancel my last twwo newsgroup posts is that within 24 to 48 hours, they will probably remove my ability to get to the newsgroup rec.radio.scanner through their isp. mistakenly thinking that's what I wanted them to do.

>Thats totally bogus. You cannot predict what specific frequency a cell
>phone will land on when it rings.

you are correct. I was going to say that maybe it was a cordless phone the lady and her husband mistakenly called cellular. But then I realized it couldn't be, since that wouldn't work everyhere (such as the studio instead of their home) for someone calling that specific phone number if it was a cordless phone.

therefore definitely celllular. But I don't think Dr. Phil was being dishonest either. Maybe he meant that as soon as the phone rang he gave a hand signal or some kind of signal to his (producers???) to scan for the cell phone frequency (the current frequency the phone was on) and play it through the studio's speaker. That's what I suspect probably really happened.

You can hear cell phones on radio frequencies as soon as they start ringing before they're ever picked up to be answered.

And a lot of people already said that as long as you're not mobile, the cell phone transmission will stay on the same frequency throughout the whole call. (such as in a stufdio).

However, I don't know how likely it is the producers or whoever could have found the correct frequency of that particular phone.

It probably depends on the time of the day it was recorded (how many other cell phones were ringing or not ringing on the radio at the same time) and where the show iss filmed or taped (how busy or unbusy cell phone signals would be).

I guess it's possible that one of the producers or whoever had a frequency counter (though probably unlikely) since Dr. Phil suspected tht the phone would ring some time (according to him).

I'm not saying you're wrong. I'm just saying that it's still possible that it was all legitimate and not bogus.

although it could also have been bogus like you said.

However, my opinion for now, is that it was probably legitimate.

I think they scanned for the frequency while the phone was ringing and either it was the only cell phone ringing on the radio at the time or else they scanned for the strongest cell phone signal, and then played the audio through the studio speakers.

A scanner was probably alsready set up to play through the speakers at the time, especially if Dr. Phil suspected ahead of time the guy would bring his cell phone.

However, I have known some tv shows to be bogus like you said. so you might still be correct. regarding that.

after all, I have been wrong lots of times.

And here's one I fell for. Once, a weekly tv show that was on here said that they were going to have The Rolling Stones on the show the next week.

Now, I don't care about The Roling Stones. However, when I tuned in to the show the next week, this is what was on:

Large rocks (stones) with still pictures of The Rolling Stones on them. one picture per stone.

None of the actual group in person. And the actual group never agreed to appear on the show in the first place.

so it wasn't a lie. They DID have The Rolling Stones on the show that week. Just not in the way you expected them to be.

Just a number of large stones with a still picture of each member of the group pasted onto each stone.

I should have realixed. It was right around April Fool's Day.

although the announcement was made on the show weeks before April Fool's Day that the Roling Stones would soon be on the show and also made on the show about the week before April Fool's Day that The Roling Stones would be on the show the next week.

The show did not air on April Fool's Day that year. That's why I said it aired around April Fool's Day that year.

However, I did fall for it.

I don't know, but I would say that no, it's not legal in the U.S. Not only because of the power (range) IF the power is illegal, but because of the frequencies it operates on.

All of the frequencies that it recieves and transmits on, such as 384 MHZ, 268 MHZ, 394 MHZ are ALL in the U.S. Federal Government band.

Transmit on that and.....

not only will your phone be gone, but you probably will be too.

That's not true, the cancel request would be processed just like any
other message. Whether other servers around the world would honor
such a request is another thing.

As for being stored on local computers, that would depend on
individual configurations. Some folks may store full messages, other
only headers for the groups that interest them....

300. wireless doorbell

Newsgroup: rec.radio.scanner
Date: 2004-06-12 04:44:58 UTC
From: Emilio Goldstien <eGoldstien@sofa.net>
Message-ID: <CfednXaF8MXXF1fdRVn-hg@comcast.com>
Source record: 20015
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I am almost divorced, but I live pretty close to my (almost) ex-wife's house house.
I would like to pick up the wireless door chime at her (really MY) old home.
I cannot seem to nail down the frequency. I've rung the doorbell and runaway 6 times now with my scanner to no avail.
One of my kids spotted me because she was parked in the driveway but I failed to see her till after I rang the bell. Then our eyes met. It was embarrassing as hell.
Anyway, I obviously can't keep trying that, plus the wife has a restraining order.
I just think that it must be possible to hear her doorbell from at more than 1000 feet away.
That way, everyone is happy.

I've always been a home automation nut, so this is really mostly for entertainment purposes.

Anyway, is this legal? It's still my house. Will it sound like a doorbell on the scanner? Someone told me I can't divulge anything I hear.

Thanks

Try sticking a 12 volt battery up your ass, then swallow a half gallon jug of
warm salt water with a cup of hydrogen peroxide mixed in.
The resulting chemical reaction in your innards,oddly enough,will perfectly
replicate the frequency of your former door chime.
Turn your scanner on,hold it by your ass,and the next time you pass gas,the
scanner will auto-tune to the correct freq !

Hope this helps

LOL... you've always been a nut?!
You sound like one (a nut) doing things like that. Is it any wonder why your wife has a restraining order out on you? You have to get yourself some help.......

I think you better move on from this so called LAME project, and get a life (get back on track) before you end up doing something really dumb that ends you up in Jail or finding yourself not being able to be around your children ever again in this life time.

What kind of man do you think your children will think of you, when they catch you doing childish things like this? And why does it matter that you need to know when her door-bell rings? Stalking people is a crime.......

Dude, step up, what a child, wireless video is the way to go, it's easy to hide a camera and record ALL happening at the wifes house. BTW I have been seeing her so don't get pissed when you see me and my boys coming over for some fun!

OK OK OK call me a nut but this is going to be my project for the day.
The wife probably isnt going to like hearing the doorbell ring all day
but hey, its raining out :) Any ideas on where to start searching at?

Thanks for your support fellas, (I think)...

Someone took this honey of a scanner for $200.00 using Buy It Now...

It may have sold for more, but I let the noise coming from the baffoons her influence my pricing.

Anyway, it's a decnt price for both seller and buyer.

AND major lessons learned for the future....

DO NOT WASTE TIME OFFERING GOOD, CLEAN, HARD TO FIND RADIOS ON USENET.

GO RIGHT TO EBAY.

I am finally convinced that the morons lurking on these groups have finally succeeded in ruining what was a good thing years ago.

Dan

well dan ......it's more involved than just offering stuff to
the " so called " buffoons on usenet .... and is still a good
idea to do.

first the person that bought the item with the buy-it-now .....
probably learned about it here on usenet.

secondly why on earth would someone take a chance of buying it
directly on a usenet offer when by using ebay would give the
potential buyers information about the seller and buying through
ebay will offer recourse if one has problems.

the " feed back " ratings found on ebay give the buyer some
idea of the quality of doing business (or lack of) with individual
sellers .....

the feedback rating system and careful purchasing practice
, on ebay , also gives the potential buyer / seller transactional
leverage during the course of the deal.

NONE of these protections are available through a straight
usenet deal. people should NEVER buy from someone on usenet
for those reasons. make them dump it on ebay or avoid doing business
with them.

lastly ..... people never seem to learn the simple and obvious
practice of paying (a low or bad feedback seller) with a
convenience store money order. a seller with a 100% perfect feedback
of 150 is almost certainly not ever going to be a problem ......
but anyone can use convenience store money orders to pay ,
anytime one is concerned that the transaction might be
questionable.

anyone , anywhere , anytime can simply fill out the little refund
stub that comes with a purchased (convenience store) money
order (and they doesn't even ask why) and " presto " , in ten
days or less your money is refunded ...no questions asked ,
no delays , no problems .. just instant refund. I also have discovered
that they doesn't even bother to investigate the refunds under a few
hundred dollars. sometimes I wish they would , to get back at
thieving and scamming dirtbags that try to steal from people ...but
they (the convenience stores) never do , it seems. either way the
buyer is protected , unconditionally ....it doesn't get better
than that.

offering , or rather mentioning your ebay sale is a GOOD idea , here
on usenet. your message gets to the targeted audience that you want ,
people on both sides of the transaction are happy for all the ebay
protections that auction house offers. (mainly the feedback system)
potential buyers , here , are generally happy to learn of your
(bargain ?) ebay offer.

always protect your " e " purchases , no matter the source by using
convenience money orders when in doubt. (paypal's refund system
is laborious and works .. but sucks for ease and convenience)

be smart ..... look at the bigger picture ..... learn to make
web purchases properly .....

k.....

There are many scanners doing that.
There must be a WFM mode (WideFM) available on the scanner.
At least all upper class scanners are having this mode.
IF bandwidth is between 150 and 250khz in WFM. On NFM (narrow FM) IF is
between 6 and 30 khz.

Wouldn't the 2 metter band rightfully go from about 135 mHz through mayby
160 or 170 Mhz. I am not certain that the writer was asking for the ham 2
meter freqs but a general question of what is two meters freq?

You can figure it out mathematically but I have to look in the book to find
it.

Yeah, we also had a lot of fun down at the range.

She was a little iffy at first, but she caught on quite nicely.

The 1911 is too much for her, but she really likes the Glock.

Restraining order? That's ok.

It only needs to last... what... (checks calendar) nine more days...

The 2 meter band, is as was listed below - 144 - 148. 13x.0 - 17x.0 may be confusing you as that is the band area normally specified by receivers as being the VHF High Band, part of which 2 meters is found in. I THINK 2 meters covered a hair below or above 144 - 148 a time ago, but this is pretty much the band plan now and has been for a while. CAP is now just below and above the 2 meter plan. I think you're trying to figure out where 2 meters is in relation to the VHF band much like 75 meters folds into 80 in the HF and so on.

I just thought, woulldn't it have been funny if the guest on the show had a digital celll phone instead of an analog cell phone, and when the producers or whoever tried to play it through the speakers, all they would get is digital noise, whatever digital cell phone noise sounds like, and couldn't figure out why they couldn't recieeve the phone conversation to play through the sstudio speakers and tv sets at home?

I just thought that it might have been funny IF that would have happened.

I'm not sure what digital cell phone noise sounds like, if anything at all, but I could imagine it possibly sounding similar to the Emergency Alert Sysyem or the old Emergency Broadcast System.

Outlook Express does just fine as a real newsreader. You seem to be taking a lot of care to disguise your location - I wonder why? It looks like you've got free e-mail account in Latvia, you throw in the Mossad as your Organization, you're posting through NewsDawg out of Englewood, Colorado, but you're really coming through ripe.net in Amsterdam. I suppose I could get more infomation as well but you're really not worth the effort. It's interesting since I live in a police state that I don't take the effort to make it difficult to figure out who I am but you, living in a non-police state , do. Hmmmm....

LOL... Outlook Express a "REAL" newsreader... now that is funny. Better make sure you got your Anti-Virus up to date with that thing.

It is people like you that are surprised when someone steals your ID (your name and such), and makes a second life so as to run up C.Cards and other things. Bet you don't even shred your Bills before you throw them out.

If I wanted to, I bet I could get every bit of information on your life (right down to shoe size ;)), but that would be a waste of my time.

possibly bad news on this. while checking for information on the new 700 mhz band, I came across websites that said that the government was also auctioning off this part of the 2 ghz spectrum and that government servicres would eventually vacate it.

I guess that means no more space shuttle video on 2250 mhz any more in a few years or so, if it could even be picked up on the R3 in the first place (which it might not ever been abvle to do anyways since the S band transmission might be both encrypted and digital.)

Downlinked data from the shuttle is on something called Unified S
Band, or USB.

This is voice, tons of telemetry data, video (all digital, no analog)
and anything else needing to be transmitted, all multiplexed together.

It's linked through a TDRSS satellite then to the ground. Shuttle
transmit power is very low, and it doesn't take much to hit a TDRSS.
(Tracking Data Relay Satellite System, or basically a repeater).

Ground stations have antennas large enough to set your house inside.

The R3 is nearly deaf to any video, but you are correct, the shuttle
is all digital, so it's a moot point anyway.

The USB has to be demuxed into its separate components. Not practical
at a small scale.

The Icom R-3 is a piece of shit. Your lucky if it hears a megawatt UHF local
TV station, let alone a very weak "L" or "S" band signal.
Don't waste your time on this "battery eating" plastic box of crap.

349. Can 2.4 ghz (or higher) wireless phones be monitored?

Newsgroup: rec.radio.scanner
Date: 2004-06-13 22:00:26 UTC
From: subhumanguy@hotmail.com
Message-ID: <8acaa215.0406131400.131cd5d1@posting.google.com>
Source record: 19964

Hello,

I have an unusual situation. My neighbor let it slip a few weeks ago that he had purchased a scanner many years ago capable of listening in on wireless phones. Obstensibly, he did this because he had a son that was getting into trouble by hanging out with a bad crowd, and he wanted to listen in on his telephone conversations so that he could interdict any bad behavior.

One of our phones is an older 900mhz cordless, and I have advised my wife that given our current neighbor that talking on this phone should be considered tantamount to using the phone in their house. A few months ago, we bought 2.4 ghz wireless phones with the understanding that they were harder to scan. I am beginning to wonder about this. Can any of the new scanners be modified to scan 2.4 ghz or higher? I don't think my neighbor would go to these extremes, but you never know.

Thanks for any input.

Regards,
BK in Dallas

good god!

You mean there mnight be a way to put that uh individual in jail for a few months if not years and make loose money big time? Why hasn't someone who has heard this thing start proceedingins in federal court. I wish I had heard it. Any FBI types reading this post. How about doing the country a favor and invite doctor phil to stand before a magistrate and start getting the lumps he justly and severly deserves.

Bill Carty

> Can any of the new scanners be modified to scan 2.4 ghz or higher?

There are some scanners (mostly -but not all- desktop models) able to
scan the 2.4Ghz range. Some up to 4 or 5 Ghz. It is not really
practicable to modify a scanner to receive on this frequency range. At
least you need extreme electronic knowledge and soldering experience on SMD.
Be sure your cordless phone has 'DECT'-standard.
If your phone transmitts a digital bitstream there is no real chance to
listen to it without some FBI/CIA/NSA equipment.

Ok, these 'slivers' of spectrum you say that are omitted, WHY???? Other than Cell Phone Freq. Does it affect price T-H-A-T much if those OTHER 'slivers' are omitted?? I don't get it, Why doesn't ONE company, just one, offer a DECENT scanner that has everything but cell. Is the '500 the closest thing to that KIND of scanner?

> the closest thing to that KIND of scanner?

Slivers of spectrum are omitted in some USA-version
receivers so they comply with the FCC's regulations about
rejecting cellular phone signals.

If they didn't comply, it would be illegal to market
them in the USA.

If you took the full coverage European
versions of the same radios and tested them in these
band segments, you would probably find that they are not
selective enough in these ranges to reject the cell phone
signals adequately. Rather than making the radios
more selective (and increasing the price), the
manufacturers have "copped out" and chopped some
frequency coverage in the USA version.

Examples are the USA versions of the Yaesu VR-500 and VR-120,
and the ICOM IC-R5 and IC-R20. The USA version Alinco
DJ-X10T and DJ-X2000T omit band segments which would
otherwise permit reception of cellular phone images.

Some of the more expensive tabletop receivers are more
selective and cover more frequencies.

>does some interesting communication exist in the band of 2.4 GHz?
>thank you
>

I don't know.if anything interesting exists there or not. I can tell you that my own videosender operates there in FM-TV mode, whenever I feel like turning it on. (for either video or audio)

It is also a ham band, so ham radio and ham tv operators can operate there also.

It's also a band used for some wireless security cameras.

and it's also an ISM band, for industrial, scientific, and medical devices.

Although I haven't seen anything there yet except for my videosender, but then my scanner is extremely exremely very poor at picking up in the 2.4 ghz band.

My videosender reciever does a much much much better job of picking up signals in the 2.4 ghz band on the channels it operates on, but is limited to only four frequencies (channels).

however, the ARRL repeater book does list some ham tv repeaters up there (dependiing on your location, none in my area) and some ham radio repeaters there (again depending on your location).

and some 2.4 ghz cordless telephones operate up there also.

Does anyone have anything new ID's to post? I'm looking for any new and reliably verified Trunk ID's for the Sacramento City & County systems.
Has anyone has identified the ID's for the City of Rancho Cordova, i.e. PD (new agency)? All would be appreciated in a reply post.
Typically, most of the web resources listing these systems aren't up to date.

I suspect I've been around a few years more than you and haven't had my ID stolen yet. Now you know I live in a plice state and don't even shred my bills? As you say, I could probably get every bit of information about you also but that would be a waste of time.

So tell us about the scanner laws in Holland? Looks to me like you can't monitor cell phones or wireless phones either. What exactly makes Holland less of a police state than the US? Other than the "coffee shops", that is.

The way your going (read below), you would have troubnle finding your front door if somebody didn't so you where it was if it was in some headers. ;)hehe

But seeing that you must get out of your house now and then to do you work... I would say you have no problem finding the door. It is just seeing where I come from in the headers that is the problem.

> So tell us about the scanner laws in Holland? Looks to me like you

Why would I know anything about Holland, other then reading about it? Oh you don't think I live in Holland do you? Is it the wooden shoes i wear that makes you think that.
Maybe I live in Russia (because of the 'omon' kit I wear from there).... lets see, maybe in the EU. But then again, maybe not..... LOL

But I can tell you this.. it is not Holland.

I heard SAM 28000 on Friday afternoon as they were talking to Joshua Approach in Southern California on 124.55 MHz, inbound to Pt. Mugu. The pilot pronounced the callsign "Sam Two Eight Thousand". Joshua routed them via the Palmdale VORTAC, descending to 14,000 then 7,000 feet before instructing them to contact Socal Approach.

That 747 must have an unusually powerful transmitter. The signal I heard was the epitome of "loud and clear".

I've heard them several times over the years on HF and VHF, and indeed,
they have some powerful transmitters.

oops. I just realized that my videosender receiver is only good for very wideband fm transmissions and not for narrow fm transmissions.

I've read somewhere that FM-TV is wider than the 6 mhz that AM-TV is.

So I'll have to stick to listening to my very very very poor scanner to find any narrow fm transmissions in the 2.4 ghz range, if any exist around here.

I can still use my videosender reciever to see if any FM-TV transmissions in the 2.4 ghz range can be picked up from my house or not other than my own videosender.

The ECPA says that no, they can't be monitored because it's against the law to do so.

However, in reality they can. I wonder how many U.S. citizens who live in the Detroit area (who were also scanner listeners) purposely drove to Windsor, Ontario (where it's legal to listen to cell phone calls on a scanner) and listened to cell phone calls coming from Detroit while they were in Windsor?

just to legally thwart the ECPA and stick their middle finger up at it.

That's the one and only legal way that I can think of for U.S. citizens to listen to cell phone calls, which blows a big gigantic hole in the cellular industry's claims that cell phones can not be listtened in to by others because it's against the law to do so.

Besides the Detroit/Windsor area, the same probably holds true for the Buffalo, Ny and Niagra Falls areas.

How many U.S. citizens in Niagra Falls (U.S. side) that live there purposeely go to Niaagra Falls (the Canadian side) and legally listen to cell phone calls coming from the U.S. side of Niagra Falls:?

Don't forget almost every consumer wireless router sold run's the 2.4
GHz range. Also microwaves run in that range. Since the 2.4GHz range
is unregulated it's a free for all.

Actually, 'non-smoker' equipment can bring a premium, from other
non-smokers.
Smokers don't care, but some non-smokers do.

I've opened up equipment from smokers that look (and smell) like the unit
sat
right in front of a smoker blowing smoke on it till it was actually covered
with
a film of smokers grease. I can only surmise that in that case the guy used
it
in his HAM shack and smoked constantly as the unit sat on the shelf right in
front of him and he was a constant chain type smoker. AND spent a hell of
a lot of time in the shack.

I've sold equipment because it came that way.

Mike

I'm a non-smoker but I never realized that equipment could have the
lingering odors of smoke such as fabrics do.

Thanks for the enlightenment.

Source record: 19850

hello. I was wondering if any of you radio fans could suggest a good noaa radio for me. I have a midland same radio but its little more than a toy.

The same feature is all hyped up but it does little to filter out unwanted warnings. I work nights and have been woke up about 5 times this week from thunderstorm and flash flood watches and I have yet to see a drop of rain. And yes I do have it programmed correctly for my area.

Also the 9v battery backup on these radios is pathetic. It doesnt last anytime at all and if its not replaced the screen constantly flashes telling me I need to.

I've read the oregon scientific radios with same rarely activate properly. Im going to pull the plug on my radio and put it on ebay. Is there any radios that you can set for warnings only that are reliable? I thought I read this might have been possible with the rs units. If not I might just go back to using my scanners.

thanks!

Coastal is probably a reference to the 167.9 "Coastal Division"
CTCSS/PL tone code. Blue is 42.34 base/42.18 mob up, Blue 1 is 39.14
base/42.18 mob up.

Legally,of course it couldn't [in the U.S.].
I don't think many serious scannists are at all concerned about cell phone
freqs these days - More at issue is mil air coverage.

I am wondering exactly how to use this software.

I have the frequencies needed. I have the scanner. (BC760XLT) (Not Tapped)

How do I set this program up properly to decode signals.

Outgoing mail is certified Virus Free.
Checked by AVG anti-virus system (http://www.grisoft.com).

Soundcard 'sblaster 16'

You plug in the audio from the scanner to your sound card mic in.
You might need to adjust some settings

Options/load&save check load last list at startup & save automatically
after 30 mins or whatever.

Under Options/Options timsplan: should be set 3 seconds/uncheck TCP/IP
remote access on port

Options/Pocsag/decoder make sure you have skyper mode checked and
everything in this section should be left alone

Next over hardware&CO
Check monitor signals/Enable soundcard/Channel should left alone (1)
Error correction should be check off

Hope that answers your question

My daughter is studying in Europe this summer. She will be in Paris through the end of June and will be spending July in Spain before returning to the US in early August.

Does anyone know of any radio that would be available in shops in Paris or Madrid that I couldn't get over here?

Also, does anyone know of a very low-priced place in Madrid or Paris to buy electronics in general?

Since I'm springing for the trip, I might as well put the girl to work buying daddy some cool radios while she's away.

Thanks.

That's why my summer shack is on the porch. Lot's of ventilation, nice Adirondack chairs (with foot rests, of course), Tiki torches, a bottle of wine (or two), my stinky cigarettes, and my beautiful wife (and her stinky cigarettes).

Would it be practical to use a ham radio as a scanner?.I understand they have channel memories,scan ability and in many cases cover the bands of interest.The best thing is those with detachable heads that would make mounting in a small vehicle really easy.Is anybody using one for this purpose.

Thanks

Ambrose

Goto the CARMA Website and download the CARMA's Chicago PDF. It has city
of Chicago and a great deal of suburb frequencies also. The direct link is:
http://www.carmachicago.com/chgofreq.pdf
It a great PDF for people who is visiting the Chicago area or moving to
the area..

Also join our Yahoo group we have a lot of cool PDF's by county also:

http://groups.yahoo.com/group/carmachicago/

Hope that helps

My opinion is that while an amateur radio and scanner are related, they intended for different purposes.

Scanners generally scan much faster, have more memories organized in a different fashion, do trunking (analog and digital) and are usually triple conversion Vs < 3 for the amateur variety.

This doesn't mean you can't use an amateur radio for scanning purposes, it just won't do the job as well.

Dave... K9JDK

I read in this article
(http://www.usatoday.com/news/nation/2004-06-17-alert-usat_x.htm) that
NOAA will be broadcasting more than weather alerts now. I'm only
assuming that these new alerts will require a new radio?

Here is a company in England, I know your daughter IS NOT GOING THERE!
I am providing this site so you can shop for Europen radios!

<http://www.javiation.co.uk/http://www.javiation.co.uk/>

There again if she is in Paris there is a good railway service over
(under) to the UK so you may persuade her to have a few days break here
and do a bit of shopping for you. You may find it difficult to find
anything here that is cheaper than in the US though. I tend to buy from
the US and even after taxes etc. it works out less expensive.

Take a look at http://www.eurostar.com/dctm/jsp/index.jsp for the
railway info.

418. Re: Noaa Same radios with warning only?

Newsgroup: rec.radio.scanner
Date: 2004-06-18 14:08:38 UTC
From: lsmyer <myer413ny@hotmail.com>
Message-ID: <10d5tr5tb55uo3f@corp.supernews.com>
Source record: 19883

We have a few of the Oregon Scientific weather radios with SAME in our household. They work too well, as far as we're concerned.

We live on a hill near the intersection of three counties. That means that we have to program the radio to give us alerts in all three counties. And since the area has so many rivers and streams, 95% of all weather alerts are flood related. That means that we get awakened continuously by flood warnings for people living near a river in the far end of one of those counties. Because our sleep is more important to us than a flood warning, we usually end up turning off our weather radios. One night this past month, a very severe thunderstorm came through with winds of 80 to 100 miles per hour. We had four hardwood trees blow over and lightning hit a tree just 20 feet from our house. No one around was injured, but there was lots of property damage to clean up. That night, we didn't have our radio on because the NWS had issued flood warnings throughout the evening, so we turned them off before we went to bed.

I wish there was a radio that would let you pick and choose which warnings you wanted to be alerted to. And I wish the NWS had a way to pinpoint a smaller geographic area than a county.

Just my two cents worth on the subject.

I don't see why you would need a new radio. They are just changing what
they broadcast, not the mode of transmission.

Scott

My Midland has the capability of adding new "tags" for new messages/message types. I think this is what they're probably talking about.

There are already "civil emergency warning" "radiation hazard warning" "nuclear power plant warning" "law enforcement warning" "child abduction warning" etc in the SANE standard.

A couple of questions about the pro 95

first off is there a reasonably priced software product that I can purchase to program the thing? Radi Smack doesn't seem to have software for it.

Secondly, I have winscn for my bearcart 785 I would like to use that "Template" to load into my radio shack model 95. I can't seem to find a way to importit the winscan file into into a TXT file (or I hjave forgotten how).

Any solutions kind and gentle people?

Cindy,

Is it too much trouble to just post them to this topic? Isn't part of the purpose of this NG? Sharing the magic?

I was also considering bringing my MURS transmitter. Is there alot of usage on those freqs around Jim Thorpe? I'll scan them anyway to get some idea. Might be nice to talk to you folks while I'm "pocket fisherman" fishing on Mauch Chunk Lake.

The AR8200B MKII w/OptoScout-40 reaction tuning will probably pick up more than I want (thank you gmrs, frs, cell, etc.). Probably leave it at home come to think of it.

Listening to the local Hams will be fun, too.

Thanks.

Andy

426. MURS transmitter assistance please.

I've got a RS MURS radio but you have to go inside it to change the dip switches to change frequencies.

Is there A MURS transmitter that flip freqs. by a dial on the outside?

Or if that's not an option, any MURS transmitters that use plain AA bats?

Thanks,

Andy

Yeah, that's why I was wondering...because of the pre-programed tags.

I dont think mine has the ability to add new ones...this is why I thought maybe a new one would be necessary.

If your current radio meets the standard, it already has those tags.

The list of existing codes, as well as their NWS status, can be found
here...
http://weather.gov/os/eas_codes.htm

Cheers,

-Donald

Yea Uniden get rid of that battery pack & go to AA's. The Uniden battery
pack is on reason I went for the PRO-96.

Hi.,...I'm a newbie to scanning. I want to be able to listen to my local emergency services--police, fire--which I known are trunked. Are there any inexpensive, possibly portable scanners, that will allow me to do this? Are there any good websites where I can learn about scanning so I have some idea as to what i'm talking about :) Thanks.

Try this site:
<http://www.strongsignals.net/index.cgi>

Stare out with the NEW USER FAQ

<http://www.strongsignals.net/access/content/new_user.html>

Go to the bottom of the TRUNKING board

<http://strongsignals.net/access/boards/trunking/board.cgi>

and FREQUENCY board and look up the systems in your area, check out the
trunking scanners specifications to see if they will work- receive those
systems!

<http://strongsignals.net/access/boards/frequency/board.cgi>

Down load a copy of the manual (do this for ANY electronic gear!) and check
out the SOFTWARE pages/board, to find a cable and software program, it makes
programming
one of the newer trunk tracking scanners much easier. Many of the
scanners have files shared on line you can down load using the software.
Jim

> one for this purpose.

Well...

I'll give you my experiences, not with mobile rigs, but with HTs.

A scanner (Like a Pro-95) is designed as a scanner first, last and only. The banks, bank selection, lock-out etc are all pretty easy and straight-forward to use.

My Kenwood TH-F6a, is a tri-band VHF/UHF radio first, and a general coverage receiver/scanner second. (It sucks as a general receiver unless you attach an external antenna, then it is ok).

Yes, the TH-F6a has "banks" and "bank select" and "lock out" but they are all secondary functions. Bank select is in a secondary menu. Lock out is a two key press action, etc.

The channel scan rate is speedy enough though.

The TH-F6a scratches the itch that a scanner does (I usually don't bring both) but it is a bit more of a pain to program and use as a scanner.

If I was going into another area and expected significant searching or entry of new frequencies, I *would* bring both.

The short story? Unless you are a ham and are significantly going to use a ham rig AS a ham rig, go with a scanner, you'll be happier.

My $0.02,

Message-ID: <cb4h4002qqd@enews4.newsguy.com>
Source record: 19922

OK,

I worked an event yesterday, and I wanted a audio recording of the ham radio network coverage of that event, so I went looking for scanner recorder software.

The first stop was google which brought me to strong signals...
"http://www.strongsignals.net/access/content/software.html#RECORD"

I downloaded and tried:
Audio Record Wizard,
Scancorder
and
Xcorder

Audio Record Wizard looked really slick, but it's demo only goes for 3 minutes. It seemed to work well enough. They wanted $25 for registration.

Next was Scancorder. It had a cheesy push button interface. I couldn't get it to see audio coming into my machine, plus it had a demo mode that would only record for about 4 minutes. They wanted $29 for registration.

Finally, was Xcorder. It's website isn't very sexy, but HOLY COW what a nice application. It includes logging, log stamping, VOX based recording, timed recording, separate files per hour, a visual VU meter... And it was free to begin with.

I used Xcorder for the event and it worked flawlessly. The timed record started it on time and shut it off too, (saving disk space). I saved the results to a wav file, but it also supports about half a dozen different formats.

For me, Xcorder did the trick.

Moved from Pasco to Pinellas County in Palm Harbor area and wanted to know if there is a recent updated talk group list on the web somewhere? Talk groups are difficult here and some info I found is not right. Help is much appreciated and thanks. Already have Clearwater edacs system in scanner and working fine. I rent out a home in Pasco and thought I'd be able to monitor fire and police there from Palm Harbor, Dunedin area, but the reception is spotty on my 780 with stock antenna at the back of unit. Thinking outside antenna on mast or Austin Condor big stick on mount outside.

Trying to decipher talk groups here, any help much appreciated

Jbird -
I was in the area with a PRO-95 in April. Would you have the same scanner?
If so, perhaps we could trade some .P95 files. I spent quite some time attempting to organize all
the freqs I could find into first an XLS spreadsheet, then transferring over to the W95 program to
upload to the scanner. I'm probably no more than 3-5 miles from you, and go back and forth between
Dunedin and TS.
Capt. Purple.

>Palm Harbor FL?

I am thinking of moving to that area...is reception really that bad?

466. Re: Palm Harbor FL?

Newsgroup: rec.radio.scanner

Source record: 19931

Scratchy reception listening to Pasco and also St Pete PD. Clearwater is great and Pinellas County is good as well. Just too many TGs that are unidentified. Can't hear Hillsborough very well either. Now that's with stock antenna on 780 XLT remember

Dont even bother buying scanpro. If you want something that is worth
buying then look into ARC780 and Trunkstar780.

Are you east of rt 19?

Also, do you have any experience with short wave radio....how is reception?

I click on it to check it out and find out it's another person who can't understand
how to be truthful. It's FOR AUCTION ON EBAY, it's NOT for sale.

And sorry, when you can get DTMF decoder for free all over the web and you offer it 'as is' with the only testing being 'the light turns on', sorry, it's a rip!

I use the Yaesu FT-7800 in my vehicle. When I am not on FM repeaters I call
listen to Fire/PD/EMS, ect.
If you need trunking or APCO 25 digital, forget the ham radio and use a
scanner.

I am west of rt 19 near the water just before Klosterman and Alt 19 and yes I do SWL and reception here is very good with 80-foot random longwire (end-fed Pal magnetic balun) which I take into a preamp that splits to 2 shortwaves. Cannot complain about SW reception at all, it is great. Just frustrated because Pinellas talk groups are outdated it seems and I have no idea who is where or who I am listening to. Pasco was much simpler, I think I'll move back. Traffic was better there too

Looking for a prog that puts the virtual face of 780 on your comp and SanPro looks good, the price is right, and I'm not looking for alot of bells and whistles, just want to have an easy interface with my computer. Don't really care for the Trunkstar graphics, looking for radio face graphics. Thanks for the input!

Well, whatever floats your boat I guess. Most people want to spend there
money on something that works good and ScanPro is not the answer. I
never understood why people want to control there radio on a screen that
has the same buttons on the radio right beside it. If your going to
spend your hard earned money on something then get what works good and
not settle for something that is so so. Trust me when I say that
TrunkStar780 and ARC780 are the 2 best programs out there. Hell I think
winscan780 (I cant believe Im going to say this) is even better then
scanpro.

There are a zillion cute places available in the Dunedin area, which is still quiet and unspoiled.
Lots of for rent and for sale signs every couple of blocks.

Capt. Purple

Yes I am beginning to agree, if their (ScanPro) customer service quality mirrors their product. I emailed the ScanPro sales addy with a few questions and they directed me to a very basic and fundamental FAQ site that did not cover either of the questions I asked. They didn't even read it. I will check out the ARC780 software site. Thanks for the heads up.

So this asshole cop pulls me over today and starts asking me why I have a scanner in my car. I tell him it's a hobby and that NJ state scanner law states that having a scanner in your vehicle is not illegal unless it's used for commiting a crime or evading police. Which is true. It's says so right here:

http://www.siscanner.8m.com/laws.html

and here:

http://www.maxpages.com/frequencies/NJ_Laws

and here:

http://www.fordyce.org/scanning/scanning_info/nj-laws.html

That wasn't good enough for that asshole, so after he writes me for not having a seat belt on, he tells me that the "NJ scanner law stuff is hogwash" and that unless I'm a tow truck driver, EMT, fire fighter....(insert own bullshit) that I can't have it in my car and that he has 30 days to decide if he wants to charge me with the crime of having it in my car.

What should I do? I know for a fact that it's not illegal and this asshole harrassed me just cuz he was bored i suppose.

One thing you could do is go back and read the responses you got when
you posted this the last time. That might help. About a year ago,
wasn't it?

LOL!!!

Here I was thinking... holy crap... he posted the same thing as he
did last year.
Then I read your reply.
Way to go Tad!

So this asshole cop pulls me over today and starts asking me why I
have a
scanner in my car. I tell him it's a hobby and that NJ state scanner
law
states that having a scanner in your vehicle is not illegal unless
it's used
for commiting a crime or evading police. Which is true. It's says so
right
here:

http://www.siscanner.8m.com/laws.html

and here:

http://www.maxpages.com/frequencies/NJ_Laws

and here:

http://www.fordyce.org/scanning/scanning_info/nj-laws.html

That wasn't good enough for that asshole, so after he writes me for
not
having a seat belt on, he tells me that the "NJ scanner law stuff is
hogwash" and that unless I'm a tow truck driver, EMT, fire
fighter....(insert own bullshit) that I can't have it in my car and
that he
has 30 days to decide if he wants to charge me with the crime of
having it
in my car.

What should I do? I know for a fact that it's not illegal and this
asshole
harrassed me just cuz he was bored i suppose.

microEar VHF RECEIVERS
The microEar VHF radio receivers are, despite having been on the market for over ten years, the smallest narrow-band RF receivers in the world. Fitted with just a single A10 or A13 battery (BTE version), they can receive for over 30 hours. Depending on the power of the transmitter, information can be sent directly to the ear of a wearer over a distance of several hundred metres without requiring a single cable or any other piece of equipment. Automatic squelch circuit, noise filter, high sensitivity, automatic frequency control – all these features and more in a unit weighting less than 5g. A feather weight with the making of a champion.

One thing you and the other morons that fell for this could do is not be so easily trolled in the future.

Your good buddy Cumbucket Curmudgeon is responsible for the post you're all replying to.

Next time you see him, ask him why Steve Gielda booted his dumb ass off Cotse and who was responsible for it.

He's just lashing out because it just so happened to be me.

Actually this one is beyond a troll. Excessive morphing and posting
substantively identical articles. Granted each one is a news story, but
the articles contain only text from news stories and if the user wants that
posted he should post it as links all in a single post rather than as 20
separate posts each just containing a news story. It's a slightly gray

issue of BI, but we decided that it was abusive if continued and because it is gray warned our user first.

/steve

Source record: 19767

I have a realistic pro 2022 scanner that will not work. The unit will
come on and I have tried to reset it according to the user manual.
But the key pad is inoperative and it scans through all the banks only
the frequecy indicator shows all 0's. Would there be any tricks to
get it to operate again. Thanks

Be more specific. For what city/state? Some road crews are on low
band, and I understand some even use itinerant freqs.

While it is not a transmitter by design it still transmitts weak signals.
There are various oscillators in the scanners that can act as very low power
transmitters without antennas. The range may be only 100 yards but that
can be enough to cause problems with the radios and other electronic gear in
the plane. Just imagine the scanner outputs a stray signal on the
navagation receiver or it blocks a transmissoin from the tower at a critical
point. Not likely that it can hapen but they want to cover all the bases.

Steve,
Nice photos of t Marine 1 Helos, at the G8 meeting, now how about some
frequencies?
And would you label them I.E. if you herd a Marine helo
on a control tower or arrival/departure frequency, please indicate
that. If they were on a discrete channel or new frequency that would be
great! Were there any HF SSB or VHF UHF land moble FM channels
active, in support of the G8 meeting?
Jim

it IS a transmitter if it is a superhetrodyne design, the local
oscillator for the mixer is often several milliwatts, and can end up
right smack in the middle of Navigation and Communications bands.

You tune your scanner to the correct frequency so the local oscillator
is spot on you can interfere with navigation and communications.

the use in flight is explicity prohibited under FAA regulations, if
you choose to ignore, them fine, but you could find the FBI awaiting
your arrival at you next destination, and you may be spending the
night in somewhat less than 5 star accomodation..

Yet they will allow you to use a Laptop, portable DVD, Gameboy,
electric shaver, etc. All of these will put out as much if not more RF
interference than a scanner. If the airplane's navigation system is so
suceptible to RF interference, what's stopping terrorists from taking
advantage of this by using a scanner secretly, say in their pocket with
an earpiece? Or, does the scanner have to be seen by the flight crew
for it to have any ill effects?

I don't hear computers, DVDs, Gameboys, and shavers over a block and
a half away in my car on VHF and UHF, but I can show you areas where
I CAN hear the LO of a scanner 'sweeping by' when I drive through
at that distance.

It's not ALL scanners. Some are worse than others.

Heck, I've gotten permission to use my 2M ht in flight, as long as I
promised
not to transmit, and advise the captain when I turned it on AND when I
turned it off. (I assume he was actually going to look at things to see if
he
could detect any issues.)

Stop whining, keep the scanner shut off when you fly, unless you are in a
private place and the pilot in command says it's ok.

Here's a great list of frequencies:

<http://www.strongsignals.net/access/content/faf.html>

LOOK UNDER " DOT frequencies"
way down the bottom of this list!

load up the FRS and the 154.600 154.57 151. 625 and the other
itinerant frequencies

And look up the company's name (or if they are a "townie" DPW out fit) that's
on the side of the
construction trucks. If there is just a telephone number with out town or
address,
do a reverse telephone number look up on the web for the name then
look them up here

<http://www.cityfreq.com/>

I have herd town DPW flag crews using
the itinerant frequencies. In stead of their licensed High Way frequencies!
Jim

Not anymore :(

Both have been discontinued, meaning there are now NO trunking scanners
being produced and still no digital scanners available for the Australian
frequency bands.

I sympathise with you Mike.
DAMN UNIDEN AUSTRALIA!

Hi guys. I am getting back into the hobby after 8 years of too much work. I want a handheld that I can program from the computer and that recieves 800 and mil-air (200-400 mhz.)
I have a Pro-62, A Pro-93, a 2006, and another RS unit in my work truck, but don't remember the model. The Pro-93 was supposed to be computer programmable but I never got it to work. The Pro-62 is a great unit but takes too much time to program.
If anyone here can help me with my decision it would be most appreciated, and I am open to all suggestions. Thanks in advance!

Well there are a lot of radios that are computer programmable. I would
guess that your problem with the PRO93 is that RadioShack sold you the
wrong cable for it. If you need digital trunking then you are looking at
the PRO-96, BC250 and the BC296. If you are not in need of digital and
can wait a few months then the BC246T should be out by the end of the
year. I guess you could get the BC250 and not the digital card for it or
a PRO-95 but I would wait and see what the 246 has to offer.

No, no, no. He needs a 12VDC block. Avcom-Ramsey sells them but they are pricey. DownEast Microwave makes a good one. I have used them for GOES and INMARSAT reception. You will have the choice of what type of connectors to have monitored. I prefer the female "N" connectors and use a "N" to female "F". Grove Enterprises sells the adapters. Your other connector choice will be the BNC. Do a Google search for Avcom-Ramsey and try www.downeastmicrowave.com. Buy the 12VDC power supply, 3 amp model is fine from Radio Shack.

You are correct. They have P25 digital for some time. Many of the Va. Beach talkgroups are in the 60,000 number range. I don't think Chesapeake has totally converted yet to P25.

Yes, and when a nice PC originally was marketed you paid close to or more than $2,000. The reason the price of PCs has dropped is because of increase in demand. Scanners/receivers/ham radio equipment has niche market meaning there is a smaller demand for the products. Therefore equipment pricing tends to be higher. It was the same situation for Direct TV equipment. Originally the equipment cost was close to $500. Now it is under $100. Supply and demand drive the pricing of almost everything.

Jim wrote:

> Granted only few % of population want to listen to scanner.

Your best bets are to join some of the Yahoo groups for the Tampa Bay
area and/or those devoted to the BC780. For example;

http://groups.yahoo.com/group/tampabayscan/

http://groups.yahoo.com/group/TampaScanning/

http://groups.yahoo.com/group/UnidenBC780XLT/

These groups may have data files that you can use.
This group also may have files you can use. It's a members only
group, but it's real easy to join:

http://groups.yahoo.com/group/arcsoftware/

73s and GL....Mike

Probably not and I don't understand the attraction. I've owned several that
were modified when I bought them (2004 and pro34) and it didn't take long to
figure out that it wasn't worth the effort. I have a 2006 that I purchased
new that still has all it's little diodes intact. RM~

In many cases the "european version" of a scanner (if there is a real(!)
european version) has continous coverage. No cell block etc...

Uniden 250 D. You can program it from your PC. You will need the E Scanner Plus software to program it with.
I got my software on E Bay for about $50.00. The scanner comes with everthing els you need.

I also have the digital card installed but have not heard anything digital in the year I have have it.

Have fun

If it receives in the 800 Mhz section allocated to cell phones.
FYI, these days 90% of cell phones are digital so scanners are
useless that can receive those frequencies.

OMG you actually paid 50 bucks for that piece of crap software :/ FYI
you dont need E Scanner Plus to program it. You can do it by hand or get
the better software from Butel.

All the scanners I ever used, had the frequency range they could
recieve, on a plate on the bottom, or back of the unit. Another way
to find out is to program a cell phone frequency and see if you get an
error message.

The hard part isn't the receiver, they are "dirt cheap". It is the
digital codecs and analytical software that reconsitute the audio
that costs all the money.......

```
Cellular Telephone Frequency List

Unlike the rest of the 800MHz band, cellular frequencies are spaced 30 kHz
apart. Be forewarned that it is common to hear XXX language and adult
subject matter on a regular basis. This type of listening is not suitable
for family entertainment. In most areas of North America, there are two
service providers available to the customer.
Service A Service B
824.040 - 834.990 835.020 - 844.980
869.040 - 879.990 880.020 - 889.980
845.010 - 846.480 846.510 - 848.970
890.010 - 891.480 891.510 - 893.970

592. Scanner freqs

Newsgroup: rec.radio.scanner
Date: 2004-06-30 04:09:37 UTC
From: Lou <FFSTA17NO@SPAMACCESS995.COM>
Message-ID: <52rEc.1454$Wd.5724@ord-read.news.verio.net>
Source record: 19707

Hey Folks!

I am asking a question which I seem to think I've seen the answer to in the past, but never the less have to ask again - as I didn't take notes.

A friend of mine, was doing some traveling, and was interested in some frequencies for a particular area. But it seems to me, as I told him, we should or "may" be able to get them for most any area on the web. IS THAT TRUE?

Wasn't there a way of tapping into the FCC site for a given area, or something similar? He asked about Canton Ohio in particular, but not to limit the search to just there. He can't get the news groups, but does have web capability if directed to a site.

Thanks in advance for your help. PLEASE - answer directly if possible, MY news groups have been acting flaky and I may not see your reply.

Thanks again,

Lou

There are many places on the web that he can find freqs. www.google.com
is the best place to start.

FYI most cell-phones switch from analogue to digital depending on signal strength and how busy the sight is. I still pickup hundreds of cell-phones with my scanner and even more when I go down to the states. The reason for that is that the US cell companies believe that they are protected by the US laws and don't bother to upgrade so plenty of cell-phones to listen to in the US.

Yep, Try scanning between 869 to around 880 mhz WFM . I would never
consider doing this myself, but thats just what I have heard that other
really bad people have done. It takes all kinds really.

Good Luck

To each their own, but I'm not so sure I can understand the big deal behind the cell phone scanning. WHY? Because:

1. you don't know who they are - I'd say 99.999% of the time, nor what the hell most are referring to. So, it serves no useful purpose.
2. you wouldn't want someone tapping into your calls - would you?
3. it is not legal to act on or report any thing you may hear, even if it were a murder plot being discussed.
4. if you collect private information which anyone with a cell phone or cordless for that matter would be dumb to give out over such, then the question begs to be answered - just what do you plan to do with it? Would you want someone collecting yours?

Listening to local cordless phones, if that is your thing - would provide better listening. At least you have a snow ball's chance in hell of knowing who they are, and the things they speak of will be more localized. Hell, ya might even hear them talk about YOU.

I purchased an original IBM XT computer with EGa monitor ,
2 360kb diskette drives and 32kb of memory for over $3000 in the early 1980's

The first IBM PS2 model 80 386 computer listed for around $8,000 in 1987.

My pro-2005 Radio Shack Scanner cost about $300 around 1989

My Uniden 796D scanner went for a bit over $500 the beginning of this year.

Get what you can afford to enjoy and don't look back.

Steve

Can someone tell me actual frequencies in use for Motorola GP300
radios? VHF or UHF are okay. TIA.

While lots of folks use the FCC databases, Cityfreq and Percon, these all have a similar problem; old licenses that have expired (or not being used as more and more folks transition to trunking) aren't removed; the FCC simply doesn't have the manpower (personpower??) to do it. So while there's gems among the dirt, you have to be a bit more familiar with the region(s) you're interested in to find them.
To that end, there are numerous scanning egroups on Yahoo groups (and probably other servers as well). It's always better to get freq information from folks in the area - they're much more likely to be accurate.

City Freq is a great site and is listed at the top of the following link,
as is the FCC web site.

Take the raw data from cityfreq and punch in the frequency or licensee
field at the FCC site to get the complete license abstract.

Go to the bottom of this board, the FREQUENCY board for more information look
under RELATED LINKS!

<http://www.strongsignals.net/access/boards/frequency/board.cgi>

You guys may also want to check out "what's illegal" here:

<http://www.afn.org/~afn09444/scanlaws/>

BEFORE you go on a ROAD TRIP!
Jim

Cool idea, but extremely pricey and overkill for most of us. I have a
setup identical to the secret service (coiled clear earpiece) which I
have often worn for hours without anyone noticing I'm wearing it - and
the complete setup was less than $100.
Bought from http://www.audioimplements.com/ over 10 years ago. I had
not used it for a few years, and when I went to use it, the cord had
darkened. Sent the entire kit back, they replaced it for $15 or so. :)

Not compleet worthless, trunking is used in two cities in the netherlands,
and on schiphol.
Also many industries use it.
But tobad, the frequentie band is differend.

There is a lot of trunking systems used in europe. But not only the frequencies used for trunking are different fromthe US ones. The implemented protocols too are different from the ones used in europe. The only trunktracking system, I know of, wich is (basicly) working in germany is based on a PC program IIRC for the PCR-1000.

639. FS Scanner Crystals

Newsgroup: rec.radio.scanner
Date: 2004-07-03 15:44:54 UTC
From: Lou <FFSTA17NO@SPAMACCESS995.COM>
Message-ID: <WvAFc.1503$Wd.8055@ord-read.news.verio.net>
Source record: 19654

FS.

Crystals for you Crystal Scanner collectors. I wouldn't be posting an FS here, but these are ALL Scanner crystals.

Qty. - Frequency - markings - condition
1 - 460.400 MHz - Type MRU-2 from M-tron - new in pkg
4 - 33.760 MHz - Type MRL-2 from M-tron - new in pkg
10 - 460.500 MHz - Type BCT from American Electronics Inc. - new in pkg
3 - 460.500 MHz - "stamped" BCT - Japan. Possibly same as the former listed 10 crystals. These look new but aren't in package. $2.75 EACH - these 3 only.

I got these in a buy out. I'm not sure what they fit. The BCTs I can only assume are for Bearcat. I don't know for sure. As to the rest, I haven't a clue.
IF anyone out there recognizes any of the "types" listed and/or familiar with the companies listed as to markings and so on, please let me know even if you're not interested in buying, it may help me to be more clear in any future listings. .

Crystals - even if in pkg new, are sold AS IS. I don't know if they'll work for you. EXCEPT for the 3 loose crystals, the rest are $5 each plus shipping. Buy 2 or more, they're $4.00 each plus shipping. Buy the lot, "I" will pay the shipping. Payment via postal money order only. ALL sales of any quantity will be based on any prior sales.

PLEASE..... IF replying, REPLY DIRECT. I've been having trouble with the news groups. Some days I get them, some I don't. Remove the NO SPAM to reply.

Thanks,

Lou

Correct. When not using the official designation, it's "SAM 28000"
instead.

Hi
My friend has asked me this question for many years he has owned and listened to the cops on his analogue scanner purely for general interest in his office just make the time go quicker!.
The cops now seem to have a new system which apparantly is digital it looks like a sooped up mobile phone/radio.
He is asking if there is anyway he can listen to them and what equipment he needs to buy and where can we can get it from?
We are in Bucks and it is Thames Valley cops

I don't know what world you live in but in the US the cell companies have been hiding behind that stupid law and not fully changing over to digital. I can always find someone to listen to on the US cell bands.

It was the FCC in the US that put that law into effect and all TV signals in the US will have to be digital by 2006. That means that if you don't have a digital ready TV now you will have to have a set top box. That is also why the TV manufactures are dumping the analogue TVs with some giving them away to clear the stock. The good point to this is that they can stack 4 or 5 channels on one signal taking up less band width also less or no interference. Also better clarity and sound that is not do-able with analogue. Satellite TV is already digital with the set top box so they are years ahead of many of the rest.

Wrong, it is Air Forece One only if it is an Aircraft operated by the
USAF, on the Helicopter (which is operated by the Maries) , it is
Marine 1, on the C2 it was Navy One, on an army aircraft, it would be
Army 1...

This is all going to depend on what type of radio system it is. Since I
have no clue as to where Bucks and Thames Valley is then I can not look
it up for you. There are several digital scanners out there that may
work for him.

A little research with Google reveals that Thames Valley has
converted to the new TETRA system that is being installed in the
UK. It seems that to date no scanner is available to monitor this
system.
see http://uk.geocities.com/surreyscanner/tetra.html
for some background information.

>
>Jo
>
If you like aviation monitoring, you also want a scanner that will do
AM in the 138 - 144 MHz range. There is a lot of military aviation
activity in that range. Your UHF coverage should start down around
225 MHz and be capable of AM mode there too. I have a PRO-26 handheld
and a PRO-2045 desk top that cover milair. Both have been
discontinued for about 5 years now.

See the Strong Signals site for info to help you find what you need to
do what you want,

Source record: 19674

I brought a scanner on board a US Air flight pre 2001. The stewardess looked up Radio Shack in some little book she had and said it was ok to use in flight. It was interesting but I found that once we got up in altitude there was so much coming into a single frequency that it made the radio pretty much useless. Think of hearing hundreds of stations all at once on a single freq.

Run it under hot water for about 3 minutes, then try turning it on. If it works, it can receive cell phones.

I still take my dual band ham radio on board, although I no longer use it.

I used to pass a note to the pilot (through the flight attendant) with a copy of my license and my request to use the radio aboard. I had a place for him to check "tx/rx", "rx only", or "nothing" and a signature box. I had about 50/50 luck when asking. I got the impression some airlines had rules against this, while some didn't and you may get a cooperative pilot. This was before the cell phone craze which made everyone thing you'd bring down a plane with a "designated" transmitter aboard.

It is cool to pick up something on every channel! I couldn't, however, really listen to anything long enough to determine where the signal was from.

In today's nervous climate, I won't be passing notes to a pilot any time soon.

Now when I travel, I leave the radio off in a carry on bag (ready for emergencies, of course) and try to use my GPS device. It is interesting to see your position, altitude, and speed in a jet aircraft.

this is way off topic. Yes, I saw the film. What I tend to say is that
people should vote the man, not the party. Yet, we have people who would
vote for Saadam if he were in their political party, regardless.

John Kerry testified to unsubstantiated hearsay evidence that
slandered America's warriors. He witnessed none of the activity to
which he testified; he knew none of those whose testimony he repeated;
he had, in fact, no basis whatever for any of his testimony.

As a result of his testimony, many Americans and most Europeans
actually believe that we (America's warriors) murdered, raped, cut off
heads, tortured and generally behaved as the Moguls.

His testimony was not true, his own experience told him that it was
not true and those he heard it from were not able to substantiate who
they were let alone their testimony.

read that again?

Paragraph A of that particular cfr does not state that the pilot has any
option whatsoever on commercial flights. in paragraph b, it only applies
to private aircraft.

679. Re: Cellular Telephone Frequency List

Newsgroup: rec.radio.scanner
Date: 2004-07-06 02:30:06 UTC
From: Handset King <hs_king@swbell.net>
Message-ID: <O8oGc.6638$MP4.2375@newssvr23.news.prodigy.com>
Source record: 19694

An update to the Cellular Telephone Frequency list:

Having worked in the cellular field for 10 years (AMPS, CDMA, TDMA and GSM under the belt, with UMTS coming) and being a scanner buff, let me give all of the newbies a heads up. The cellular band is basically dead for listening. Commercial scanners can't decode TDMA, GSM or CDMA modulation. That leaves good old analog (in FM) signals. And they are getting more and more rare. The explosion in cellular growth took place when all of the digital modes launched. So, a large number of subscribers use phones that support these modes.

Also, T-Mobile, Sprint and Nextel never supported analog (AMPS). That leaves Cingular, AWS (AT&T Wireless) and Verizon Wireless. Cingular has overlayed all AMPS/TDMA with GSM and will eveantually phase out analog. Likewise for AWS (especially if the Cingular/AWS merger goes through). As for VW, the support analog as a roaming tool. I can tell you that most analog channels that are up are due to federal decree. There has to be analog channels for 911/TTY-TDD, etc... If the feds wern't involved, analog would be gone in another year.

So, don't waste your time or money on cell phone scanning. The future is digital trunked. At least you can get a decoder card for that. And the present- well, good old analod trunked seems to be very active.

Good luck - Dave

680. Uniden BCT-8

Newsgroup: rec.radio.scanner
Date: 2004-07-06 02:36:39 UTC
From: Handset King <hs_king@swbell.net>
Message-ID: <XeoGc.6641$yZ4.5012@newssvr23.news.prodigy.com>
Source record: 19695

Anyone have any tips on programing the BCT-8? I have a PRO-93 that I have no trouble getting to work in trunked mode. However, I can't get the BCT-8 to follow my local system (Mot type II). I entered the lists, etc... I even tried the Control Channel Only option. My problem is that the unit scans the bank and always stops on the active control channel. I tried to lock that out but it still doesn't display the group ID when it stops on a voice signal. According to the manual, it should display the ID I entered when it hits an active channel.

If anyone has the magic touch with the BCT-8, I would appreciate any help.

Thanks - Dave

Sticking my $.02 in ....

I understand that the regs say the "operator" of the aircraft is the one who has the say ... many 'civilians' take that to mean the pilot but it actually means the airline company.

However, having said that .. the pilot seems to have the power to over rule the "operator" ... he could loose his job (or his life) by doing such a thing but like a ocean ship captain he is the boss in the air.

I would never ask the captain to overrule the electronic devices list. My life is too precious to risk.

I thought that was in Tompkins County, but it's in Schuyler County.

Start ehre:
http://gullfoss2.fcc.gov/cgi-bin/ws.exe/genmen/state_county.hts

Then click on:
ULS Database

OK, we get a big list. My guess is that you're looking for "Watkins
Glen International." Oh, yeah; that's it.

http://dbserver.iscmotorsports.com/TheGlen/index.cfm

To find all the listings, search for the word "INTERNATIONAL". In
MSIE, this option is under "Edit". You get these call signs:

KNIK946 (misspelled "INTERATIONAL")
KNIP733
KNIP920
WNAJ310
WNIH735
WPHE993
WPSH282
WPSH284

All are in service type IG, Industrial/Business Pool, Conventional.

You can take it from there.

I recently did the tail squelch mod to my pro-51 and I think I got the surface mount resistor to hat (only used 25 watts). Anyway I didn't like the mod so I pulled one hundred ohm resistor back off. Went I turned the scanner back on it would not stop on my local police frequency, I could turn up the squelch and listen put it would not stop on its on. Long story sahort I need the resistor value to 105. b If no one knows it, could someone point me in the right direction? Thanks for all your help

A 100 ohm resistor is much too low. You should be using a 100,000
(100 K) ohm resistor or higher.

Yes the stubby will work fine. I used one at Las Vegas a couple of
years ago and had no problem hearing the cars anywhere on the track.
(Was sitting in the middle of turn 4.)

Hi,

I used a splitter on the regular AM/FM antenna with pretty good results. It is pretty simple to install. Just unplug the antenna from the AM/FM radio and plug it into the splitter. You must then connect one output to the AM/FM radio and the other output to the scanner. The splitter I had had two "Motorola" jacks (same as on the AM/FM car radio) for outputs, so I made a short cable with that type of plug to connect to the AM/FM radio. I made another cable with the same type of plug on one end and a BNC connector on the other for the scanner antenna connection.

My car had a standard "whip" type antenna and not an in-glass antenna. I don't know if that type of antenna would work well or not. I am also not familiar with Volvo's so that may not be a problem.

Good luck and don't be afraid to try anything. You may be surprised how well unconventional antennae work. Be sure to post the results of what you did and how it works.

Phil

712. PRO 92 question

Newsgroup: rec.radio.scanner
Date: 2004-07-08 04:24:19 UTC
From: kd6bfr@hotmail.com
Message-ID: <5e4cfbe8.0407072024.66f202c9@posting.google.com>
Source record: 19627

I aquired a Radioshack PRO 92 "B" but it doesnt seem to want to trunk. The system is San Diego and is a 3600 baud analog system. All the frequencies were entered, including data channels. All "D" was removed and MO entered manually on all frequencies as they were entered. Is their a trick to get it to trunk when you turn it on? By the way it is a 3.28 firmware version.

713. Re: Uniden BC580 - Question

Newsgroup: rec.radio.scanner
Date: 2004-07-08 07:16:45 UTC
From: Jim Mac Donald <jmacdon@mitre.org.no>
Message-ID: <cciscu$r13$1@newslocal.mitre.org>
Source record: 19628

Go to this site

<http://www.strongsignals.net/index.cgi>

and check out the FREQUENCY and TRUNKING

<http://strongsignals.net/access/boards/trunking/board.cgi>

<http://strongsignals.net/access/boards/frequency/board.cgi>

messages boards, go down the bottom, under the text pain.
Look over the resources for frequency and trunking systems in
your area of the country, to see if the 800 MHz band is trunked, then look at
the
trunk tracking models to see if they will support the trunking, that is work the
systems.
If after reviewing the FREQUENCY resources for your area ,you do not find any
800 MHz activity then this is
all a moot exercise.

If any of the systems mention APCO
and/or P-25, the APCO systems are both trunked and conventional.
You will need a digital trunk tracker scanner!
Be careful there are several other digital modes that are not covered
by the hobby digital trunk trackers.

DOWN LOAD A MANUAL BE FORE YOU BUY
It's great to have a manual for any electronic gear on the hard drive! It will
help you learn how to us the gear while your deciding to buy!
Also look at the specifications in the on line manual, match them
up to the systems. The advertisements will also tell you what systems/modes are
not supported.
The software programming is the best way to us the newer radios!
check out the software resources at stronsignals.net!

Then you can make a fully educated choice on weather you will want to purchase a
new trunk tracker scanner.
After purchasing a new digital trunk tracker either try selling the BC580, trade
it in on the new
radio, give it away or us it for conventional VHF UHF frequencies and keep the
trunking and/or digital commas
in the new radio.
Jim

715. Pro-38 Scanner Mods

Newsgroup: rec.radio.scanner
Date: 2004-07-08 09:41:46 UTC
From: stevewp@yahoo.com
Message-ID: <97b21d7f.0407080141.125d6afb@posting.google.com>
Source record: 19630

I've read loads of posts about the 29-54MHz
mod for this scanner. I know most people are trying to change this
band for the 66-88MHz band, but like other Brits, I'm trying to do the
opposite.The problem is, all the instructions I keep finding are
unclear as to what exactly I'm removing, since the guys doing it the
other way just need to fill in the blank link. I'm trying to find out
which of the diode, two fuseable resisitors and 100k resistor I should
be removing!!

More concerning though is what someone said about not actually
receiving anything below 39MHz, despite being able to input the
frequencies. Has anyone managed to grip this problem?

I only just bought this scanner for my other half
to stop her knicking my Kenny TH-F7E (Grrr), and of
course, it's the stuff below 39 that's of greatest
interest to her!! ;o)

Would appreciate any help and advice.

Steve

You're on the internet, have the whole world of information in your hands,
and post to this newsgroup.

How'd you find the newsgroup?

Come on, look a lil deeper into the internet, I'm sure you'll find it. You
didn't look hard enough, it is out there. I think I may even have 1 or 2
sites bookmarked but I'll leave it up to you to find what your looking for.

I know some people who live right near airports. (almost right next to the
airports).

could them listening to scanners in their own homes interfere with the
airports' and airplanes' navigation sysyems and cause the planes to crash?

I hope not, but it sounds to me like they can from the information given in
this newsgroup.

hehe.
i work with them & own a pro-39.
i've never managed to make it RX anything.as u say will program ok
but no rx.

never been able to do it.

it would be nice!

the only thing i have found before (and that was on a 38 like yours)
is that the published mod does not seem to kill rx on 66-88 .
so it must be wrong.

hope we get some help!

mike

trust me I've found frequencies for tons of crap from McDonald's to
FBI and I've truly searched, I use this world of information on a
daily basis from gardening to programming the list goes on and on.
This wasn't just a request from someone who's too lazy to look for
himself, but that's alright I'll find it.

725. Re: Scanners and commercial airliners

Newsgroup: rec.radio.scanner
Date: 2004-07-08 22:39:39 UTC
From: Sean <sean@funland.com>
Message-ID: <L2kHc.12163$2i3.5674@clgrps12>
Source record: 19640

My understanding from an aviation standpoint is that there really is no problems with using these devices on or near aircraft. The problem lies in that some devices MAY cause interference MAYBE. It is easier to paint everything with the same brush and just say no than it is to say what is allowed or not. Then you get into fighting with every clown that wants to bring their device just because "someone else was doing it so why cant I"

As for living next to the airport and using a scanner....scanners don't cause airplanes to crash....pilots cause airplanes to crash. Think about it. Airports use some heavy duty transmitters...RADAR, and VHF/ UHF and aircraft transmit all sorts of signals. Why hasn't one pilot on one airplane or an ATC transmission caused another aircraft to get lost/act funny/fall out of the sky?

We are merely being protected from the few that would try to use this equipment with malicious intent.

S

726. Re: Scanners and commercial airliners

Newsgroup: rec.radio.scanner
Date: 2004-07-08 23:46:44 UTC
From: ddpepper@webtv.net
Message-ID: <16340-40EDDCE4-420@storefull-3274.bay.webtv.net>
Source record: 19643

Following a midair crash over Manhattan in the late 50's/early 60's that was traced to a transistor radio in one of the airplanes that was tuned to a NYC AM station that interfered with that plane's avionics, non-approved radios were banned from use in in-flight commercial airliners. I don't blame the airlines for being a bit "paranoid".

727. ID Tracker Update - Version 3.2.0

Newsgroup: rec.radio.scanner
Date: 2004-07-08 23:52:25 UTC
From: "David M. Hitchner" <biteme@spammers.net>

Just in time for the weekend!! ID Tracker 3.2.0 is available for download.

Changes from previous version:

- Added bank indicators.
- Added "Auto Lockout" function.
- Added "Status Bit" function.
- Added running clock to status display.
- Added "Next Segment" and "Prev Segment" functions to audio playback.
- Made improvements to playback code.

try
http://svartifoss2.fcc.gov/reports/index.cfm

and look for ms state and ms dnr(conservation)

my suggestion is to go to seach state/county page retrieve all of the
records in the county then do a Licensee / State using the information you
get from state county search.

hope this helps

What they find after an event is evidence that supports possibilities.
You're
right, they couldn't pinpoint that as 'the' cause of the crash, but they can
sure as hell say 'here is a problem'.

> this newsgroup.

Uh, think about that for a moment. A scanner can cause interference for a
few hundred feet. How far is that plane? It's the planes receiver that's
at
issue for interference, not the ground.

It's like the idiots on Long Island that protested the first Concord flights
because they were aftraid of the supersonic airliner when it landed. The
press seemed to be sympathetic to the cause, but the night before the
pilots were featured at a press conference and were asked about that.
I think it was the co-pilot that pointed out that if the Concord was
supersonic during landing, they had a lot of other issues that were probably
more of a problem.

I have the Pro (0 its ok but I can't get it to do anything with the "trucked" part of the radio, I can't load it with anything, everytime I do I get the error massege, so what good is this on this radio, any help I am pretty new too this thing.

741. Audio problem when using an antenna multicoupler, how to solve?

Newsgroup: rec.radio.scanner
Date: 2004-07-09 15:11:40 UTC
From: gordon@scangwinnett.com
Message-ID: <bd553e83.0407090711.2e74bceb@posting.google.com>
Source record: 19506
Cross-posted to: rec.radio.scanner,rec.radio.shortwave,rec.radio.amateur.misc

I'm using a Stridsberg antenna multicoupler to connect three scanners to the same beam antenna. The audio of each of the three scanners is fed to the line input of three separate computers.

After I connected the scanners to the multicoupler I noticed that in the audio of each of the scanners you can hear the audio of the other two scanners (but at a much lower volume). If I disconnect the scanners from the multicoupler and switch to separate antennas the problem goes away.

Is there something I can do to prevent the audio from each scanner completely separate from the other two scanners?

Thanks for any suggestions,
Gordon

You say three scanners.

As far as I know, John S, makes a 4 input multicoupler. If you have a 4 input unit and are using only three, make sure you terminate the unused input.

Use a formal terminator (cheap) for best results, or solder a 50 ohm resistor across a make BNC if nothing else. Don't use a 75 ohm terminator such as is used in CCTV systems.

Unused and unterminated inputs in a multicoupler can cause unpredictable results.

Also call John Stridsberg and ask him. He knows his product. I expect the first thing he'll tell you to do is terminate any unused input and get back to him.

> After I connected the scanners to the multicoupler I noticed that in

Make sure you don't have ground loops. Look for bad coax shields on all RF coaxes. If signals can't find the path they expect for the return line, they'll force their way through the equipment.

Swap stuff around and try to narrow the problem down to one component.

> Is there something I can do to prevent the audio from each scanner
> completely separate from the other two scanners?

I've used many of John S' couplers and not had this problem.

I suspect you have a ground loop (open ground) in the RF or audio wiring. Find and fix that and your problem will clear up.

My intuition is that it's a ground loop in the audio path. Try
unplugging audio from the other computers and see what happens.

If the crosstalk goes away, I'd try a radio shack audio isolation
transformer ($15) in the audio lines to the computers.

Hi,

About a month ago I bought a Netset 100 Pro-46 Scanner.

It's been very interesting and I've found that I can pick up a large number of cordless phone calls in my area.

I've hooked the scanner up to a server and I'm broadcasting the conversations live.

This scanner is located in Waterloo, ON [Canada], where it is legal scan for phone conversations.

I've setup a Website with a Large LISTEN LIVE link on the page as well some FAQs about the scanner and some information about the server.

Check it out:
http://waterlooscanner.zapto.org

Just click the LISTEN LIVE link at the top of the page [winamp required] or open winamp, hit ctrl+L and type in "waterlooscanner.zapto.org:8000".

I just thought I'd make the site and scanner a bit more public, because it just doesn't seem fair that only my friends should be able to enjoy all the scanner has to offer =).

Most of the time people just talk about stupid stuff, but sometime you hear some pretty intersting things. It's suprising how much people talk about drugs in my area after 10pm.

Enjoy! And contact me if you have any questions or comments.

- Micro

Is it really possible to use a scanner without being exposed? I heard from few sources that scanners produce internal oscillator signals that can be detected. I suppose there is no "stealth" way to listen a scanner. Any ideas?

Not sure exactly what you're asking...

You can put the innards of the scanner into a Faraday cage and just run in the (shielded) antenna cable (perhaps with a notch filter to hammer the IF frequency(ies)) and run out (very low pass filtered) audio cables.

Sure you'll have some small coupling back to the antenna and audio leads, but you could knock it way down.

It really depends on what you consider the threat to be...

I have a hard time imaging it to be an issue without serious cloak and dagger stuff going on. (In which case, there is probably specialized equipment...)

i think the mod for the pro-39 is on www.mods-dk steve.
the otherone might be there also.

mine is written on the back of a service sheet from radioshack which i got
years ago.
it relates to a link by a 100k resistor be the ic.

not my writing sadly.

i know i tried a 38 my mate had years ago, but we could not reset the cpu
even by pressing the buttons.

That is certainly something that raises answers on both sides of the issue. I don't believe that your scanner is that much of a threat to an airplane. Laptops put out a tremendous bunch of noise, and they are considered okay to use. There are megawatt transmitters that are flown over all the time and no one forces them to be turned off. There are so many electrical systems aboard an aircraft, they could be malfunctioning and leaking.

That's just my opinion and I will not disguise it as fact. There are similar fanatics that go crazy over cell phones at gas stations. I've never heard anything but opinion, but many will disguise them as fact.

I live in the Air Capital and know many aircraft engineers. I'll ask a few for their thoughts on radio interference to an airliner. If this topic is still around, I'll post my non-scientific findings.

I've had the same problem, but was only using two computers. It was a ground loop. Simple take a heavy gauge wire (12 in my case) and ground each computer chassie to eachother then ground that to the Stridsberg multicoupler. In my case I didn't need to physically ground the cases of the scanners as that was already taken care of my the outer sheld of the coax between the scanner & stridsberg.

Someone mentioned terminating the unused Stridsberg output. I have 2 of the amplified 4 port multicouplers and 1 of the 8 port amplified couplers and never terminated unused ports so in my case that wasn't an issue.

This was soooooo funny. The first conversation I heard was some guy calling a gay sex line. Was looking for some c**k to s**k.

Thank god my cordless is 5.8Ghz, scrambled and spread spectrum. You never know who is out there trying to listen in. The number of people that do banking by phone without giving it a second thought. You can build a touch tone decoder and watch the numbers come up as they access their bank codes. Would be so easy to transfer money out of their account, just because they are dumb enough to use a cordless phone.

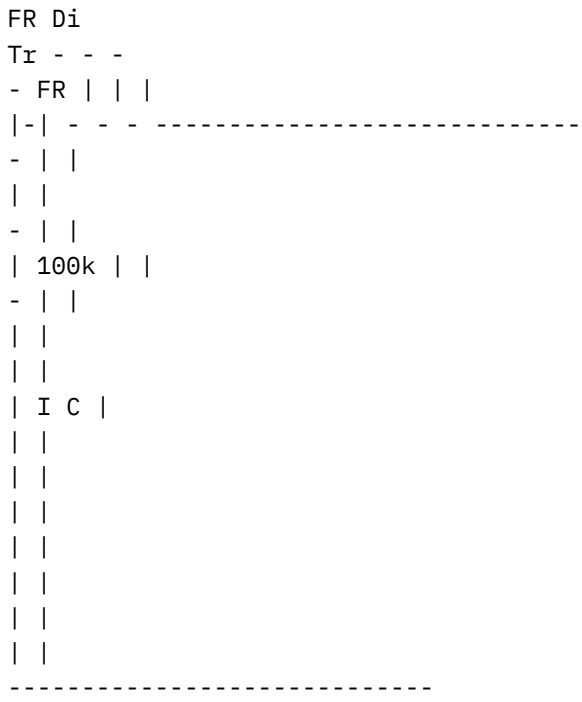
Does that mean the 100k resisteor IS the link, or it's a link near the resistor? I got the details of the mod of mods.dk, but it's not specific enough, and everyone else just copies the same mod on their pages!!

Basically, the layout is :-



Where Tr is a Transistor, FR is a Fuseable Resistor, Di is a Diode and IC is obvious!!!

Maybe someone can clarify (if you're not able to Mike) which of these components needs removing?

Apologoes in advance for the poor quality of my diagram!!! He he

Ground loops produce hum, not usually cross-talk audio.

Try the cheap radio shack isolator first. If that doesn't work try
the Royal PAD.

Royal DB-25 attenuation boxes with ground lift solve most of the audio
problems I've had.

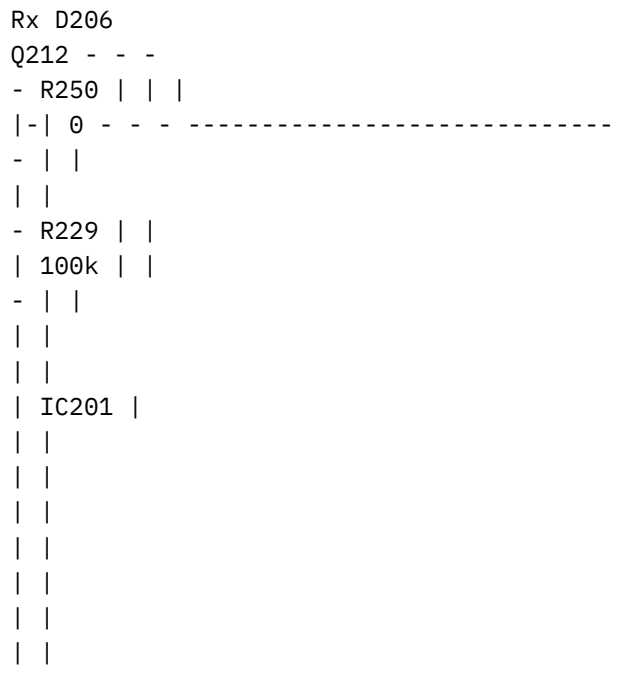
Source record: 19527

Basically, PRO-38 the layout is:



Q212 is a transistor, R250 is a 0 Ohm jumper, D206 is a diode
and IC201 is the CPU.

The US service manual does not indicate what RF components to change
if converting from European VHF LO to US VHF LO. Removing Rx should
set the VHF LO plan to US. Removing D206 will probably keep the radio
from scanning. Rx is probably a 0 Ohm jumper that connects IC201 pin 66
to ground. Pin 66 is the second one down from the top on the left side
of IC201. You will need a Euro service manual to find out what RF components
must be changed for good RF performance. A realignment would be needed as
well.

The ASCII drawing may look better if this message is copied to the clipboard
and pasted into Notepad. It all depends on your browser.

Cheers Frank and Mike. Will try the Rx mod first to see what happens.

Wonder if anyone's had any joy with retuning to get it to receive
these frequencies?

Just curious.. I'd like to play with my scanner again, I haven't for a long time, and I'm digging it out! ;) TIA!!

Also:
My friend had the exact same model as mine a couple years ago, and he was able to pickup phone conversations and things that I could not, even when standing right next to eachother and manually entering in the same frequency.. I never knew why, I just figured his crystal was tuned better than mine.

If you don't find a way to resolve this problem, I recommend buying a C. Crane FM Transmitter and using your radio instead. This is the best consumer-level FM transmitter available right now. You can even mod it to get a little more power out. The big advantage is that there are no wires running to your dash. See it at: http://www.ccrane.com

That may be so but transistors made a lot more noise than printed circuit boards and no one (well maybe some private A/C) is using AM signals to navigate anymore (ADF)

And did they really prove that or did someone just find a radio in the wreckage and say "oh this must have caused it" because the public would really be worried if they said it crashed because an engine fell off?

>Is it really possible to use a scanner without being exposed? I heard
>from few sources that scanners produce internal oscillator signals
>that can be detected.

aqnd my question is, does this screw up Smartsignmedia and Mobiltrak to detetrmine which radio station you're listening to?

They're using machines to read the local osciallator on your car radio and looking 10.7 MHZ away to determine which radio station you're listening to.

But they're looking for which radio station between 88 and 108 mhz you're listening to, so advertisers can target their advertising to you on freeway signs.

But if you're listening to a scanner in your car instead of the car's radio, and if their machines can handle it, they'l get a frequency readout such as "144. 250 mhz" or "455.325 mhz", in which case they'll probably be scratching their heads and going "huh?" ;)

Since this would be an accurate readout of which station or frequency you're listening to, it doesn't really screw them up. It just confuses the heck out of them. ;)

However, my own scanner uses a local oscillater of 240.1 mhz, which I imagine probably would screw them up since their machines are looking for and reading as 10.7 mhz away from the local osciallator frequency.

They would probably get a completely wrong readout of what station I'm listening to.

Of course, this also has it's possible drawbacks

that's news to me. Since that's part of the regular UHF tv station band.

I never knew that there were ISS beacons right in the regular UHF TV band.

But then again, for a long time, I never knew that there were regular two way land mobile communications right in the regular UHF tv band in certain cities.

I think I'll look up ISS beacons now.

My scanner does cover the 600 mhz range. However, I don't reccomend my scanner for that range. Get something better than what I have.

I have an IC-R3, but I do NOT reccomend it as the best for the 600 mhz range. Plus it has a lot of birdies in it.

I'm sure you can find a better scanner than that for the 600 mhz range for cheaper which is also more sensitive than that.

I'm not sure what the best scanners are today.
Someone else in this newsgroup can probably help you better as to what to get. for listening to that range.

I'm just telling you what I think you should probably avoid for listening to that range.

in my opinion.

OK, Satscape lists two ISS beacons: one at 628 and one at 632 (MHz).

Good info here.
http://www.svengrahn.pp.se/radioind/mirradio/mirradio.htm#FGB

Hummm... They're putting out 3.5W on 130.167 during EVA?

That... [beep] could be... [beep, beep, beep, beep, beep, beep, beep,
beep] REALLY cool [beep]. Now I just need to attach it to the good
antenna and a recorder when they might go EVA...

Now if the local agencies around here would get as modern as the cell phone industries, we'd never have anything to listen to - then again, police, fire and EMS aren't in it for the profit, so they have to work with what they have...

In my county, most of the fire departments are still dispatched on a 30mhz system. EMS is dispatched on 155mhz, for the most part. At least several of the local PD's are on a 400mhz trunked system. One local town dispatches police on a digital system. In the county north of me, most police departments are still in the 150-155 mhz range.

Thanks all, the problem was a ground loop. Radio Shack's ground loop
isolators did the trick, all of the crosstalk is gone!

Thanks,
Gordon

Early versions have firmware bug that causes alpha tags to be
duplicated in several banks. Press 3 while the display says
"WELCOME TO DUAL TRUNKING", and it will reveal the firmware
version.

Version 1.0 is the only one affected, the newer ones aren't.

Well I have a version 1.0 and I would really like to know of a list
trouble duplicates. Maybe I could stay away from them. I do know 905
writes over 019 so far. Also is the firmware upgradeable? Thanks in
advance.

Cheers!

... It was the FCC in the US that put that law into effect and all
TV signals in the US will have to be digital by 2006. That means
that if you don't have a digital ready TV now you will have to have
a set top box. That is also why the TV manufactures are dumping the
analogue TVs with some giving them away to clear the stock. The
good point to this is that they can stack 4 or 5 channels on one
signal taking up less band width also less or no interference. Also
better clarity and sound that is not do-able with analogue.
Satellite TV is already digital with the set top box so they are
years ahead of many of the rest.

Well here are my thoughts on this. First, I don't believe that the FCC
has any power to regulate any laws. As they can only make
recommendations for the lawmakers to do so.

Second, High Definition TV was supposed to kick in a little while ago
(same thing as digital TV perhaps?). Well this was cancelled because
most consumers didn't even own one yet.

Third, you know companies are going to sell digital TV tuner boxes that
will work with analog TV sets anyway, if something like this gets past.
Plus they will still work with game machines, VCRs, and DVD players
anyway.

Cheers!

You know, this "Health Hazard" bit is getting old. BPL, if
implemented, would be limited to the restrictions of part 15. This
means no output power levels in excess of 100 milliwatts. You get
way more than that every time you press your cell phone to the side
of your head and press the talk button ..... Now, if you think
your cell phone is safe and will not cause cancer, why is it that
you keep insisting that a power line even 30 feet away is going to
cause it ?

Actually I did listen and record that show. And it isn't the radiation
hazard that has me alarmed. It's the idea that all frequencies 80Mhz and
below would become totally useless. Thus many things like commercial
broadcast AM, shortwave, some aircraft navigation, radio control
aircraft, some emergency services, etc. would be all gone.

Cheers!

Source record: 19547

Alpha tags for channels 816 - 929 are mirrored in channels
014 - 113. It appears that only one byte was used for the
address of the channel number and that covers 256 channels
rather than 300. Channel 816 is the 257th channel and its
tag is wrapping back to the first channel, 000. All channels
up to 929 are affected, with 929 wrapping back to 113.
This affects all version 1.00 firmware PRO-93's.
If channel alpha tags are not entered in channels 816-929
the tags in channels 014-113 are not corrupted.

Firmware can only be upgraded by replacing the CPU or replacing the whole
logic board. Check at your local Radio Shack and ask about the firmware
upgrade program for the PRO-93. They should know about it and be able to
send your radio to a regional repair center for upgrade.

Hi Frank... Hey thanks a lot. That sure helps me out. Say is that firmware upgrade program costly? And won't you know, the volume just today started fading in and out. So I had taken it apart and somewhere there is a cold solder joint or a cracked run I would imagine and I can't find out where it is. Although the good news is I have it stable now. But the bad news is it is about at 25% of the volume it had originally. I can only get full volume when the board is out of the case and apply a little pressure on it. This would probably cost more to repair than what it is worth, wouldn't you think?

Cheers!

Just in Vegas last month...casino frequencies are pretty interesting there.
I got all the freqs on a google - already dumped them, sorry - but security
in casinos is verrrrry entertaining there haha.

Try this site:
Look under airports

<http://www.airnav.com>

At the bottom of the airport pages you will find links on some pages, to
business
at the airport. They are called Fixed Base Operators, along with
others doing business around the field and some times the web pages
will have frequencies , However they may not be very busy.

For land mobile FM frequencies around the city and/or for the
airport authority
try:

<http://www.cityfreq.com>

And try this site:

<http://www.strongsignals.net>

Currently using an Alinco DJ-X3... replaced the stock with a Diamond SRH701 which is giving me pretty decent performance. However, after replacing with a Diamond SRH771 (looks the same design as the now-obsolete RH77CA), reception actually seems to be slightly worse than before (would just pick up an ATIS broadcast from an airbase about 20km away before, now it picks up nothing).

Any recommendations? The Diamond SRH999 is also not an improvement despite it being 3 times the price of the SRH771...

As you probably have guessed already, I can only get Diamond stuff locally... heard only good things about the Watson WSMA-881, but I have to order that overseas... trying to avoid that.

Thanks in advance..

794. Re: Radio Shack Pro-93 v1.0 Alpha Tag Bug

Newsgroup: rec.radio.scanner
Date: 2004-07-13 17:00:14 UTC
From: BillW50 <BillW50@aol.kom>
Message-ID: <R86dnZS0tMD4imndRVn-uQ@sysmatrix.net>
Source record: 19459

Hi Frank... Well I stopped into Radio Shack today and they gave me an estimate of $62 for repair. But the actual charge is up to the repair center. I dunno, as for about $38 more I can buy one without the bug and has more volume than this one. Although I could fix the volume on this one if I can locate a schematic for the Pro-93.

Speaking about the bug, I have a two digit alpha tag on 902. Although funny that one doesn't show up in Bank 0 (or even Bank 1 for that matter). Thus maybe it has to be longer before it actually wraps?

Cheers!

Bill (using a Toshiba 2595XDVD & Windows 2000)

Hi Frank... Hey thanks a lot. That sure helps me out. Say is that firmware upgrade program costly? And won't you know, the volume just today started fading in and out. So I had taken it apart and somewhere there is a cold solder joint or a cracked run I would imagine and I can't find out where it is. Although the good news is I have it stable now. But the bad news is it is about at 25% of the volume it had originally. I can only get full volume when the board is out of the case and apply a little pressure on it. This would probably cost more to repair than what it is worth, wouldn't you think?

"Frank346" <frank346@groznyk.com> wrote in message
news:x7DIc.42337$4h7.4661146@twister.nyc.rr.com...
Date: Mon, 12 Jul 2004 21:10:53 GMT

Alpha tags for channels 816 - 929 are mirrored in channels 014 - 113. It appears that only one byte was used for the address of the channel number and that covers 256 channels rather than 300. Channel 816 is the 257th channel and its tag is wrapping back to the first channel, 000. All channels up to 929 are affected, with 929 wrapping back to 113. This affects all version 1.00 firmware PRO-93's. If channel alpha tags are not entered in channels 816-929 the tags in channels 014-113 are not corrupted.

Firmware can only be upgraded by replacing the CPU or replacing the whole logic board. Check at your local Radio Shack and ask about the firmware upgrade program for the PRO-93. They should know about it and be able to send your radio to a regional repair center for upgrade.

>Yep, Try scanning between 869 to around 880 mhz WFM

interesting because people told me that my scanner which does not cover the cell phone band was picking up images of cell phone calls in the 990 mhz aircraft band.

Yet the signals of these "images of cell phone calls" were in narrow FM mode and also AM mode.

That is, some were NFM and some were AM.

None were in wide FM mode.

They did all frequency hop.

There were some (a couple) of cordless phones in wide fm in the 900 mhz ham band (one of them our own cordless phone), but most of these were only in narrow fm mode and did not frequency hop. none in AM mode as I recall. These were on the correct frequency however, instead of images.

I wasn't listening to cordless phones. I was listening for ham radio operators. I don't know why the government assigned phone calls that are illegal to listen to to the legal to listen to ham bands where you can't but help hear them when you're listening for hams.

It just doesn't make any sense at all to me.

and in the 990 mhz band, I was listening for airband signals, not cell phones.

phone calls are very boring, anyways.

>better listening. At least you have a snow ball's chance in hell of knowing
>who they are, and the things they speak of will be more localized. Hell, ya
>might eve>n hear them talk about YOU.

I'm not sure if this is funny or sad. I'm going to have to go for "sad".

Our neighbor was complaining to us becaue relatives of hers somehow found out information that she didn't want them to know.

And she was telling us we better not talk to anyone else at all about her. (this wasn't anything to do with cordless, cell, or scanner. She meant verbally in person).

She thought we told them.

Well, what she doesn't know is that she herself is broadcasting the information right in the 900 mhz ham radio band.

Ham radio operators could have heard her. And scaner listeners could also have heard her.

I listen to the 900 mhz band for ham radio, not for phone calls.

Hey,

The legallity of the scanner has now been questioned and by people who are apparently going to turn me into the Canadian FCC.

I got 2 emails today:

(1)

Your wrong in Canda its very ILLEGAL to do the following

1. Illegal to disclose information heard to third party
2. Illegal to make use of or divulge radio-based telephone communication
3. Illegal to "intercept and make use of, or intercept and divulge, any radiocommunication, except as permitted by the originator of the communication or the person intended by the originator of the communication to receive it" except for publicly accessible broadcasting services

So I would advise you to change your scanner site soon before

I have to turn you in to the Canadian FCC

Scanner guy

And (2):

Just to let you know..

The Radiocommuniations Act (R.S. 1985) specifically prohibits "divulgence to a third party' of intercepted radio transmissions. This would most certainly qualify.

I'm your research I'm surprised that you haven't come across this. Read section 9 of the Radiocommunications Act for details. (http://laws.justice.gc.ca/en/R-2/)

SECTION 9 - RADIOCOMMUICATIONS ACT (1985)
(1.1) Except as prescribed, no person shall make use of or divulge a radio-based telephone communication

(a) if the originator of the communication or the person intended by the originator of the communication to receive it was in Canada when the communication was made; and

(b) unless the originator, or the person intended by the originator to receive the communication consents to the use or divulgence.

(2) Except as prescribed, no person shall intercept and make use of, or intercept and divulge, any radiocommunication, except as permitted by the originator of the communication or the person intended by the originator of the communication to receive it.

9.1 Every person who contravenes subsection 9(1.1) or (2) is guilty of an offence punishable on summary conviction and liable
(a) in the case of an individual, to a fine not exceeding twenty-five thousand dollars or to imprisonment for a term not exceeding one year, or to both; and
(b) in the case of a person other than an individual, to a fine not exceeding seventy-five thousand dollars.

I was under the impression that it was legal in Canada. Can any of you give me any evidence to suggest it is?

On the site for the scanner, I even had some recorded conversations - which would probably be divulging the information.

Can anyone help me out here? I'd like to run the scanner publicly, but I don't want to get arrested and I don't exactly have the 25K req'd for the fine. Is there anything I could change about the site that would make it legal? Maybe removing the recorded conversations would be a good start.

- Jon

>Why bother? Does anyone use a analog cell phone anymore?
>--

yes. I supposedly pick up plenty of 800 mhz band images of analog cell phone calls in the 900 mhz aircraft band (around 990 mhz).

Yet these are not wide fm mode that I pick up there. Plenty are narrow fm and some are AM. And they all frequency hop.

and I don't hear any tone on them like people say there are on cell phone calls when they switch frequency.

so I'm kind of baffled.

>(1.1) Except as prescribed, no person shall make use of or divulge a
>radio-based telephone communication
>

>(a) if the originator of the communication or the person intended by
>the originator of the communication to receive it was in Canada when
>the communication was made;

since when does Canadian law have authority over U.S. law and U.S. citizens?

Several U.S. state laws say that it's completely legal to divulge a recording of a telephone conversation as long as the person doing the divulging was one of the parties involved in the call. (still illegal for scanner listeners who are not parties to the call to divulge it).

which is why I'm concerned about the part of Canadian law saying that no person may divulge it even if the originator of the call is outside of Canada, and simply calling a person in Canada.

I am aware that the original poster is in Canada, as I did read the first message.

And to him, I think they're correct. It's probably better if you take your website down or change it. I think it is illegal in Canada, as well as the U.S. You could probably get in serious legal trouble if you don't remove all of the live broadcasts of phone calls and all of the recorded brodcasts of phone calls. as that might and probably does count as "divulging" them.

It is legal to listen to them in Canada, though, unlike in the U.S.

although now that this has happened in Canada and on the internet, , I can see that police departments in the U.S. will claim that the "live police scanner feeds" on the internet is "divulging content" and "illegal under U.S. law" and get them removed from the internet also.

Someone has got to find a way to set the server up in Indonesia and get the porn sites to pay for the bandwidth! :) Just kidding!

I know one agency here in the states that encourages the streaming of their talkgroups so people without a scanner can be on the lookout.

820. Re: Radio Shack Pro-93 v1.0 Alpha Tag Bug

Newsgroup: rec.radio.scanner
Date: 2004-07-14 21:14:48 UTC
From: Frank346 <frank346@groznyk.com>
Message-ID: <cnhJc.77532$a92.62011@twister.nyc.rr.com>
Source record: 19486

The alpha tag bug depends only on the address pointer. The content of the tag itself has no bearing on the problem.

The issue is confusing because there are two places from which the alpha tag information is drawn. If a channel alpha tag is not programmed, that is, left at default, the Bank x Ch yyy display is loaded from the default template stored in the CPU ROM. When you modify the alpha tag the pointer changes to load it from the EEPROM. If channel 019 has a default alpha tag, writing an alpha tag at channel 905 will not change it. If channel 019 has an alpha tag you entered, subsequently writing a tag at channel 905 will change the one at channel 019 as well.

In my previous message I should have said that alpha tags for channels 816 - 929 are mirrored in channels 000 - 113. When I owned a PRO-93 the upgrade was done while it was under warranty and it was free. At the price they gave you it probably is not worth sending in.

"BillW50" <BillW50@aol.kom> wrote in message
news:R86dnZS0tMD4imndRVn-uQ@sysmatrix.net...

Hi Frank... Well I stopped into Radio Shack today and they gave me an estimate of $62 for repair. But the actual charge is up to the repair center. I dunno, as for about $38 more I can buy one without the bug and has more volume than this one. Although I could fix the volume on this one if I can locate a schematic for the Pro-93.

Speaking about the bug, I have a two digit alpha tag on 902. Although funny that one doesn't show up in Bank 0 (or even Bank 1 for that matter). Thus maybe it has to be longer before it actually wraps?

Cheers!

Bill (using a Toshiba 2595XDVD & Windows 2000)

Hi Frank... Hey thanks a lot. That sure helps me out. Say is that firmware upgrade program costly? And won't you know, the volume just today started fading in and out. So I had taken it apart and somewhere there is a cold solder joint or a cracked run I would imagine and I can't find out where it is. Although the good news is I have it stable now. But the bad news is it is about at 25% of the volume it had originally. I can only get full volume when the board is out of the case

and apply a little pressure on it. This would probably cost more to repair than what it is worth, wouldn't you think?

"Frank346" <frank346@groznyk.com> wrote in message news:x7DIc.42337$4h7.4661146@twister.nyc.rr.com...
Date: Mon, 12 Jul 2004 21:10:53 GMT

Alpha tags for channels 816 - 929 are mirrored in channels 014 - 113. It appears that only one byte was used for the address of the channel number and that covers 256 channels rather than 300. Channel 816 is the 257th channel and its tag is wrapping back to the first channel, 000. All channels up to 929 are affected, with 929 wrapping back to 113. This affects all version 1.00 firmware PRO-93's. If channel alpha tags are not entered in channels 816-929 the tags in channels 014-113 are not corrupted.

Firmware can only be upgraded by replacing the CPU or replacing the whole logic board. Check at your local Radio Shack and ask about the firmware upgrade program for the PRO-93. They should know about it and be able to send your radio to a regional repair center for upgrade.

Best national lists I know of:
http://eje.railfan.net/railradioonline/

N8OAY's list:
http://www.railfanswelcome.com/Railscan.htm
Scroll sideways over to Maryland.

There are other lists, but they get out of date.

Amtrak NE Corridor:
http://www.on-track-on-line.com/amtfreq-nec.shtml

best Yahoo! group for this info:
http://finance.groups.yahoo.com/group/RailScan/

This group attracts railfans with amateur licenses.

I haven't been to Baltimore in over ten years, though it's not that far away.

Bonus: Maryland Midland frequencies:
AAR channel 21 160.425 Maryland Midland
AAR channel 29 160.545 Maryland Midland

Try these sites

Check the town or city where the racetrack is located
to find the frequencies for the tracks owners, venders and local
police/fire/EMS.

<http://www.cityfreq.com/mi/brooklyn/>

And some NASCAR sites that may have frequencies:

<http://motorsports.thepaddock.com/freqs.html>

<http://w8akr.dynip.com:8080/info.htm>

some frequency information:

<http://www.speedfx.com/article.asp?artnum=8541>

<http://www.telcoweb.net/racing.html>
<http://www.strongsignals.net/index.cgi>

GOT TO THE BOTTOM OF THE MESSAGE BOARDS!
Look at the bottom of the frequency board for lots
of data bases through out the country and world!
Look up your local and the NASCAR track's frequencies to see if they
us trunking radio and/or APCO-25 DIGITAL radios

Another place to look is the air band for helicopters that bring
VIP's and drivers to the races and the air ambulance helicopter. Also
the military aircraft fly by at the start of the race
should show up, on the air band!
A check of

< http://www.airnav.com>

will turn up some tower, approach
and departure frequencies. LOOK FOR A HELIPAD! They will have to be
around thirty (30) to fifty (50) miles from your location to receive the
aircraft side
of the communications. To receive the ground side that would
be the TOWER, DPARTURE/APPROCH control, HELIPAD or the ground
side of the ARTCC stations remote transceivers, your location/receiver
has to be within
range, that's three (3) to ten (10) miles of an air band ground
station!.

Scroll down to the bottom of the" airnav" airport pages for your
airport, to see if any web links

for business at the airport, have air band frequencies listed..
You should be able to hear both sides of the air band VHF-AM
communications from any HELIPAD adjacent to the speedway!
They may use DISCONE antennas with there radios, which then send/receive
skyward.
Another consideration is bringing/using a radio scanner aboard airlines
and check out the thread at rec.radio.scanner regarding that.

<http://www.fordyce.org/scanning/scanning_info/scan_fly.html>

If you would lake to see a great BAND PLAN for the air band look at
New Users FAQ on strongsignals.net , go to ☐Frequently Asked
Frequencies☐ go to the
bottom to see who's on what part of the band. This can help narrow down
a search to find unknown frequencies.

Two other New Users FAQ sections is "What's illegal" and" CTCSS & DCS
(aka PL & DPL)" NASCAR web sites also mention states that ban radio
scanners and/or require permits!

I really like the preprogrammed SERVICE SEARCH capabilities of the
UNIDEN® radio scanners.
They search at three hundred (300) steps a second and allow LOCK OUT of
unwanted frequencies during the search, it includes the civilian VHF
air band!
The UNIDEN® BC 250D has racing frequencies preprogrammed into the
SERVICE SEARCH and dose S.A.M.E. weather alert! It also covers the
Military UHF 220MHz-400 MHz air
band! It also has PL tone capability. Down load a manual at Uniden® web
site and check it out.

Here's a vendor that supports racing radios

http://www.racingelectronics.com/

They may sell and download racing frequencies at the track,
possibly free for folks who purchase (Uniden® SC200 and there own
Racing Electronics RC 2000) radios, form them! The
SC 200 will search out PL/DPL tones. The RC 2000 can use PL/DPL tones
BUT WILL NOT SEARCH THEM OUT! You have to know them, another good reason
to have a vendor 'load'
racing frequencies,
IF THIS INCLUDES PL/DPL codes, into the radio at the track! NOTE
everything in the radio will be overwritten, you will loose
frequencies/PL when a down load is done,

Take along a list of frequencies for the track, police EMTs and
air band. Then after a vendor loads up the racing frequencies ,key your
list into another bank
(if they aren't already loaded) if something happens or when your
leaving, bring-punch up that custom bank in the scanner you have
loaded with local frequencies!

Another place to us a air band scanner is at air shows.
If you want to listen to the military air demonstration teams a UHF AM capable radio is needed! And one that has independent selectable MODE I.E. AM FM nFM. This really puts
you into the action!
Along with sunglasses, a folding chair and sun screen. Take along Walkman headphones
and an extra set of batteries for the radio scanner and camera, one roll of film should do, for NASCAR or air shows.

If you have a camcorder patch the scanner into the audio input
jack with a □Y□ splatter
so your able to listen with the head phones while recording the air show
performance. If the Camcorder audio has s monitor jack then run the
audio cable right into the camera while
listening via the headphones on the monitor circuit
Here is a schedule for air shows
<http://www.aero-pix.com/schedule/sched2004dt.htm>

And frequencies<http://www.monitoringtimes.com/html/mtairshows.html>

Check out the individual air show's web site to see if they ban radio scanners and two-way radios!
If so, when you go to the show. keep the scanner in your vehicle, then leave about an hour before the demonstration. Drive out of the show area and listen to the air demonstration team
off base! This will give you a head start on traffic, some folks do this at the stock car races also.
Have fun this summer and be safe!
Jim

Could you elaborate on your position of legality.
Do you have a statement from Industry Canada?
Perhaps you do. That would be interesting.

My interpretation of:

"Except as prescribed, no person shall intercept and make use of, or
intercept and divulge, any radiocommunication, except as permitted by
the originator of the communication or the person intended by the
originator of the communication to receive it."

is that you are 'intercepting' and 'making use of'.

I've got one. I use it to monitor the maintenance and rental office in my apartment complex as well as Amateur repeaters for ARES. I feel allot better leaving a scanner at the office than an HT. I am changing mine over to a BNC connector because the standard one is so worn the antennas fall over.

If this gives you no good ideas you could always send it to me in exchange for $$ or something else I may have. Always room for another conventional scanner around here. Its a great little scanner.

850. PRO-95 free programing from RS?

Newsgroup: rec.radio.scanner
Date: 2004-07-15 23:24:00 UTC
From: Jmcc <j_mccasland@yahoo.com>
Message-ID: <kmEJc.77908$a92.63927@twister.nyc.rr.com>
Source record: 19565

I saw a Radio Shack flyer saying the PR-95 was $199.95 and they would "instantly" program in my local channels.
One place said their computer was down, another said they did not have the software, another place said only if I purchase the cable and the book with the CD containing frequencies, the other place said I would purchase it and leave it with them for a week and they would do it in a week.
Unfortunately, I did not call ahead and expected it would be done. I sent an e-mail to customer service at RS.
Could anyone give me a recommendation on this offer or about another scanner?

Half of them wouldn't know "A" single frequency of use, let alone enough to provide you with some suitable scanning. It would be a cold day in hell when they program my scanner. I'll do it manually if I have to, at least I know I got what the hell I want. And it wouldn't take me a week to do it. C.

"...intended..."

Here in the US, if you have a small amount of a controlled substance, they assume you "intend" to sell. Well, if you are transmitting a radio signal across the county and radiating it through my body, I assume you "intend" for me to receive it.

Amazing how the powers that be interpret things for their own benefit.

I know we (in the US) are prohibited from all kinds of listening and rebroadcasting. How do you spell G-e-s-t-a-p-o?

Hi Group,

I do have a question about the UBC 278 XLT. A friend of mine wants to add a Discrimator-Out to his UBC 278 XLT, but it seems like no one is able to help him with Information on the IC and pin to use! Is anybody here who is able to help me?

From our past experience (UBC 144 XLT, Pro50, Pro28, etc) it was very easy to build such out to the scanner.

I hope you know and understand what I am asking for, I am from Germany, so maybe not every Term of the radio-technician-pro-language is correct used ;-)

Anyway, thank you for any help on this!

Is it really that important to get the scanner pre-loaded with local
frequencies? Less than 2 months ago I bought a PRO-95 and didn't even
bother to ask if they could load it. Though I never owned a scanner
before, it was easy to find frequencies with the Internet and
the scanner's search function. In fact, the amount of traffic would be
unbearable if I didn't keep some channels locked out.

Well it is kinda big and anything you put on the BCN will have an affect
on the stress load of the connector. I would have to agree with your
buddy.

Message-ID: <HIcKc.100104$a24.12312@attbi_s03>
Source record: 19586

Now that I have your attention,,,

I am not new to scanning (used to have a pro 2006 way back) but it has been some time (probably a good 10 years) since I was into scanning.

Now things have settled down in my crazy life and I recently found my old handheld pro 25 and plugged in a few frequencies from the new city I am living in (east lansing michigan 48823), I forgot how much I missed just having the scanner on now and then, so far its been fun but I miss my base unit.

Since it has been a good 10 years or so, what are the newer better base units that might offer things like display name (that you can program in text on), and what new base models/makers cover whatever frequency ranges are currently being used (the most) these days...

I never got into anything that hooked upto the computer but that would be neat too (to program it in off the pc if possible thru usb or something?) and I never got into (or understood) the whole concept of trunk tracking or anything beyond enter this frequency and hear this fire or police department (using the radioshack books).

I figured if I came in here and asked around I would get some suggestions on what the newer models offer and or what might be a good choice for someone wanting to get back into scanning after all these years.

Looking to spend under $1000 for something that might do 75% of what I am hoping since it has been a good 10 years here since I used a scanner ..

Bill

Hi Bill
Look at the Pro-96 made by GRE and for sale at Radio Shack for $500, now with a $75 off coupon, new cost $425 + tax.
The State Police in Michigan are on 800 mhz digital, the Pro-96 will decode and track this!
The scanner is already programed with most large cities, but is very easy to program all you need for the trucking is to program in the control frequency, which you can get here:

http://www.radioreference.com

http://my.core.com/~lbutler/tracker.html

http://radiowurx.com/mpscs/
Click on the blue flag for you town and it shows the frequencies needed

Almost forgot
For programing
You can make your own cable or buy one from many sources.
The best programing software is from Don Star called Win-96 and only
cost $30

http://www.starrsoft.com/

Thanks for the suggestions!

Have to go to the shack to get a few things for
this new house anyways (new RG6, speaker wire etc)
so I will definitly take a look at that..

Bill :)

I see you were looking for a base unit.
Sorry the Pro-96 is a handheld. It's still a great radio!

you need to disable auto reverse play on the car cassette player, so u can
some u can't.
try turning the imitation cassette upside down
else it's the type of adaptor cassette you have.
u need one with a spinning wheel in it to fool the tape motion sensor in
your player.

yeah I was looking for a base unit (mainly for readout and since I dont go mobile with it)... but the pro 96 did look like a cool radio...

Actually that BC796D sure looks sweet too, Donald, you mentioned about a new Uniden in about a month, any leaked info about it (what it may offer above and or beyond what is on the market today and now?).

883. When does Radioshack release new Scanner books?

Newsgroup: rec.radio.scanner
Date: 2004-07-18 01:17:41 UTC
From: Bill <billaustin@kommmkast.net>
Message-ID: <VckKc.100386$JR4.13054@attbi_s54>
Source record: 19597

Just getting back into scanning after about 10 years off, moved to a new city also (east lansing Michigan 48823) and found this one page on the net that had some basic frequencies, been doing sweep scans to find other things but was gonna go buy a new radioshack scanner book,,,

Wondered what time of year do they release the NEW version, if I go in today and buy their current book for instance, when will their NEXT version come out - do they run year to year on Jan 1st type thing?

Just hate to go buy one and 3 weeks later see a newer version came out or something..

Also any good sites that might just have my local frequencies on it (saving me time and money from buying the freq book from radioshack).

Currently I have a old pro 25 handheld, doesn't do anything special like trunking or digital etc, just the basics but I have found alot of air and fire freqs just from doing limit searches...

Bill

www.racefreqs.com or something like that...

When you put them in here is what I have found to work (for me). I put MRN/PRN in one bank by itself. I put the cars I want (you can really only listen to 2-3 without getting confused) in a seperate bank. I put the NA$CAR freqs in a third bank (it is a hoot listening to them work a caution) by themselves also. Then you can just turn the banks on and off (usually with one button/key push) as needed. This is using in RD pro95.

Police Call is typically in the RS stores in the early Spring of each year.
It is however, released by its original publisher a few months earlier.

Winscan is generally considered to be the best of the bunch for the
895 (if you're interested in trunking); however, Scan Control just came
out with their latest release that includes both programming and control
for the 895. There are a few bugs to be worked out, but by and large
it's pretty good. It also gives you an upgrade path to the new digital
trunktrackers, should you ever decide to or have to go that way. I'm not
sure about Winscan's upgradablility, if they ever decide to return from
limbo. Their customer support isn't real good; Scan Control has its own
Yahoo group, and questions are answered quite promptly.

The URL for Scan Control is:

http://www.scannersoft.com/

If what's there doesn't suit your fancy, describe some more things
you're looking for in a control program. I've done over a dozen reviews
on the Strong Signals website of 895/245 programs; perhaps there's
something out there that is more suitable.

probably both, but easy to find out which surely!
just run from batteries...is it still there?

i would suspect it to be either poor earthing in the leads (most in-ear
things have no braid at all!!)
of poor supression on the dc insocket.

two things to try.

1st, run the cd player as above in a metal tin or something metal with the
lid on, if it goes away, poor screening on the CD player case (not
suprising-i doubt it has any!)

of put some ferrite beads on the power & headphone leads.

you might wish to try another psu, but i doubt it will make any difference.

has this just started happening?

could be a local FM pirate near you?

mike

Carefully peel off the adhesive label on the back of the unit and turn the potentiometer adjustment (available through a hole in the case) all the way clockwise. I don't know how much this actually boosts the power, but it works much better than most competing products, and I don't believe it would violate Part 15 rules for the device (like changing the antenna would, for instance).

As far as taking the tower down, check with the ham groups in the Flint area. Who knows, maybe if ya pledge to get your ham license, they will help ya re-install it at your new site. Go to www.arrl.org and use their search engine to see what clubs are in the Genesee county area.

I recently read somewhere that Uniden is planning a new digital scanner with a built in frequency counter as well as other upgrades. There was a link to an information page with the report. Does anyone have any information on this?

Thanks

Hello, Bill. To answer your question, check out this link. http://www.grove-ent.com/unidenscanners.html It reads that the Uniden BC-898T will ship on July 26. Here is a direct link to the scanner... http://www.grove-ent.com/bc898t.html. I don't know much about trunking, as I only mess with ham radio, and very little scanning, but this scanner will not do the "APCO-25". It reads: "Note: This is an analog only trunk tracker. It will not do APCO-25". I'm in Tulsa, and they have gone to trunking some time ago, and I still have a Uniden Bearcat BC 800XLT, hehe. Not very up-to-date. Good luck in finding a scanner.

Hi all,

Hope someone can clear up my confusion when using CTCSS.
1. Is it possible to use same frequency by multiple parties simultaneously?
2. Can scanner detect CTCSS initiated signals?

TIA.
Jim

Jim;

CTCSS (Continuous Tone Controlled Squelch System) is just a method of controlling the squelch on a receiver.

If you have ever used a CB radio, you know that the squelch control simply adjusted the level which was required by an incoming signal before it would break through the squelch and be heard.

If the CB channels were very busy you would have to turn up the squelch higher to stop the background noise, and then only strong signals would break the squelch. However when the signal did break the squelch you could here all the whistling and squealing of the other conversations on the channel although they were usually weaker than the strong signal which just broke the squelch.

In a CTCSS receiver, the squelch does not work based on the strength of the signals. Instead the transmitter send a continuous sub-audio tone of a particular frequency during each transmission. The squelch on the receiver will never be broken unless it detects that particular tone in a transmission. At that time you will still hear all the other communications on that channel. In the case of CTCSS however, the transmission you want to listen to could actually be weaker than some other transmissions, and thereby very hard to understand.

A scanner will pick up every signal from an FRS radio because it's squelch is based on signal strength. It is not waiting for any particular tone, and doesn't even know they exist in the transmission.

Setting the sub channel on an FRS radio to 0 , tells the receiver not to look for any tones, just open up the squelch when you hear anything on the channel. I often use this setting when traveling to try and pick up any conversations in the area. If I find a conversation I can just sit and listen or if I wish to talk to the parties, I have to run through the 38 sub-channels to find the one the people are actually using. Otherwise I would not break their squelch when I transmitted.

I hope this helps.

Rick

Good explanation...I'll just add that some scanners do offer a CTCSS feature
so that you only hear the transmissions of interest, but most do not.
Certainly you do not NEED a CTCSS-equipped scanner to monitor transmissions
using CTCSS tones.

It can, however, be helpful to have at times.

Where I live, I'm halfway between two localities whose police
departments use the same frequency but different CTCSS tones. They are
in neighboring counties and don't interfere with one another's
operations, but inasmuch as I am on the border between the two
counties, I can hear both dispatchers.

Trobule is, I'm really only interested in monitoring one of the two,
because as a ham involved in ARES/RACES, I'm listening to the one in
my county of residence.

Since I have a CTCSS-enabled scanner (PRO-2045 with the optional CTCSS
board installed), I only have to listen to the one I want to hear, and
my scanner isn't stopping on the transmissions from the other
department in the neighboring county.

It's also very helpful on the low VHF band where tropo ducting brings
in low-band fire comms from clear across the state at night. Great if
I want to DX the low VHF band, I can just turn CTCSS off, but if I
want to take a nap and only have the scanner wake me up if there's a
fire here in town, I can set CTCSS on and the scanner will only go off
if the local fire companies become active on the air.

In summary, CTCSS is certainly not required to hear anything, but it
can sure come in handy to have this feature on your scanner.

Finally, I note that the original poster's address included a ham
callsign, so I will note that most VHF/UHF repeaters nowadays are
using CTCSS on the input side at the very least, whether they
retransmit the tone or not, and so amateur radio gear for the 2m and
440 bands pretty much must be equipped with CTCSS encode at least,
unless you want to be limited to using the rig only on simplex.

CTCSS is also often referred to as PL (for Private Line, Motorola's
trademark for its implementation of CTCSS on its commercial
transcievers), and also as CG (for Channel Guard, which is General
Electric's name for the same technology).

Hope this helps!

Cross-posted to: misc.consumers.frugal-living,rec.antiques.radio+phono,rec.radio.scanner

from Hi Fi World:

"If a button on your TV or Stereo remote
control stops working due to over use
it is possible to fix it. There is a product that
you can get from most auto part stores made
by *Loctite* called "Quick Grid Rear Window
Defogger Repair Kit". It is a conductive fluid
usually used to fix rear window defroster elements in
car rear windows. To fix your remote, open up the casing
and paint the fluid on the base of the buttons
that are not working effectively (...after cleaning them
with rubbing alcohol and a q-tip first!), let it dry, and
re-assy the unit. It should now work again
good as new! "

(Note: this fix will also work for the rubber
control buttons on portable radio scanners
and shortwave radios also!) :) :) :)

When I used to work as a courier, our Yaesu and Midland radios had a
"Tone" switch on them. When the tone was off, I could hear all the
other users on same frequency. However, of course, when the tone was
on, only our company could be heard. When I monitor the courier
company I used to work for, with my scanner that is not CTCSS
equipped, I will hear all the other users on that frequency.

Depends on what your needs are. For scanning, it's okay (not real fast but fairly good sensitivity). For listening to LW/MW/HF, it sucks. Overly flexible to the point of being complicated if you don't use it often.

Hi, all. Does anyone have any experience with the Ramsey SS70C Scrambler/Descrambler? Does it work well? It descrambles the inversion type scrambling, but is there a different type of inversion scrambling scheme that this SS70C will not descramble? Also, is the quality of Ramsey stuff good, or should I stay away from them? The only other descrambler out there I have seen is the one from CTP www.ctpdescramblers.com . Is CTP stuff any good? I like the fact that the Ramsey unit can scramble and descramble at the same time, and they give you a 10 day trial period to see if you like it. The unit from CTP (DS49-CU1) only descrambles, but has a built in speaker, and an AC adapter is included, but is $30 more. According to the CTP website, "All sales are final. NO REFUNDS." I respect that, but if I buy it, and it doesn't descramble the signal, I am stuck with a descrambler that will not descramble that particular inversion scheme. Maybe there are other descramblers out there I missed? Any help would be appreciated. Thanks.

VHF low-band: 30 - 50 MHz search in 20 KHz steps (0.0200 MHz)

Civilian Aviation: 118 - 136 MHz search in 25 KHz steps (0.0250 MHz)

VHF High-band: 150 - 174 MHz search in 7.5 KHz steps (0.0075 MHz)

Marine VHF: 156 - 157 MHz search in 25 KHz steps (0.0250 MHz)

220 Mhz band: 220 - 222 MHz search in 5 KHz steps (0.005 MHz)

UHF: 450 - 470 MHz search in 6.25 Khz steps (0.00625 MHz)

UHF-T band: 470 - 512 Mhz search in 6.25 Khz steps (0.00625 MHz)

700 MHz Band 764 - 776 MHz search in 6.25 Khz steps (0.00625 MHz)

800 MHZ band 851 - 869 MHz search in 25 KHz steps (0.0250 MHz)

There are always exceptions and oddball frequencies.
aaditions and corrections are welcome.

"Spread Spectrum" is the main scrambling system being used and it is not inversion. I'm no expert but I don't think there has been much inversion being used in recent years. Don't know if it's still around but there used to be a software floating around called "Invert" that worked quite well with your sound card on the inversion type of scrambling. Quite frankly I believe either to be a waste of time as there isn't much out there to de-scramble.

Hello. Unless I am confused on what SS and inversion is, I am pretty sure it is inversion. It sounds just like what some of the scrambled FRS radios sound like, and not frequency hopping (which is SS, I think?). Almost a Donald Duck type sound, but not quite, hehe. The descrambler is for my mom who lives in southeast Oklahoma, and they just switched to a scrambled system (ugh!). It's a small town, and they have just the one frequency for the whole PD. I think I might just order the Ramsey, and try it out. If it doesn't work on that particular system, Ramsey offers a 10 day "trial period", I do believe. Thanks for your reply.

Nice job!

Add:
Military Aviation UHF-AM: 225-400 MHz search in 25 or 50 KHz steps for efficiency, but realize that 5 KHz is becoming more common, and 12.5 KHz is also used (same as Civil Air). Europe has gone to smaller spacing (7.5 or 8.? KHz?) and we will eventually see that in the States as well.

There is also no need to "search" Marine-VHF -just use the internationally agreed channels. By 2006-2008 time frame, Marine will require narrow-band and smaller spacing to allow more service.
Best regards,

Jack Painter
Virginia Beach VA

That's surprising, I wouldn't think a small town would bother scrambling everything. I'm in Tulsa and the local PD uses an 800mhz trunked system (Motorola) and I believe that they have the ability to scramble certain transmissions. I don't listen to them all that much (usually have it locked onto the FD dispatch) but have never heard a scrambled transmission. RM~

I don't think he's a troll. His email address shows that he's using webtv.

webtv has a habit of dropping many individual alphabetical letters from the posts after it's sent even though they were there when sent.

I know because I used to use web tv and it frequently happened to me when I used to use it.

But it pretty much hasn't happened to me at all whenever I used computers to post with.

i can here

that is the only misspelled word in his post "here" instead of "hear".

Everything else that is incomprehensible to you in his post isn't misspelled,
but simply has a bunch of missing letters.

I HIGHLY suspect the webtv browser (or service) is at fault there.

I've learnt to read webtv's incomprehensible posts after it happened to me
several times when I used to post from there. ;)

927. Re: PRO-95 free programing from RS?

Newsgroup: rec.radio.scanner

Source record: 19441

I bought a PRO-95 and since they didn't have the cable in stock decided to read the manual. I'm glad I did. It is easy
to program and I now have a greater understanding on how to operate it. I found more than enough local freq's on the
net. I was listening to our local police (trunked) within an hour. I've been very happy with the scanner.

928. Re: When does Radioshack release new Scanner books?

Newsgroup: rec.radio.scanner
Date: 2004-07-22 11:55:06 UTC
From: PowerHouse CB & Scanner <PowerHouse@PrivateBox.Net>
Message-ID: <10fvaogjofg5vf3@corp.supernews.com>
Source record: 19443

Police Call is released at Radio Shack during late winter or early spring. Police Call is actually published by another source, and then sold to Radio Shack. The original (non-Radio Shack branded) copy is generally released in the fall, usually in September or October if I remember correctly.

Here is a link to the website: http://www.policecall.com

You can purchase it through the site if you like, but shipping charges are some-what high. I'd suggest either getting it at Radio Shack, or purchasing it through another online retailer. You might even try and see if your local book store could order it...

On a side note, being in Michigan, you won't be able to monitor the Mi State Police without purchasing a new scanner that has Digital capabilities and can handle the higher 9600-Baud Trunking...

For what it's worth, I tried this (on a Dish satellite
remote) and it work very well for about 3 hours and then
the conductive material began falling off. After a few
uses of each button, I was right back where I started,
with the addition of much conductive junk floating
around inside the remote control.

I tried conductive silver paint (from a spray can, but
applied with a "Q tip") and had the same results.

There is a product sold for this specific purpose, but I
haven't tried it yet. It is apparently rather volatile
(you are warned to use it within a specified period of
time after opening, or it dries up. It was available
through a few distributors, but don't remember which.
I should follow up and find it and try it as well.

But, save your money and time with the windshield repair
stuff. That hint was apparently written by a professional
hint writer or by someone with incredibly good luck.

Lastly, I know the difference between anecdotal and
empirical data, so take my experiences with the appropriate
quantity of salt.

I have three RF remotes for my big dish with the same problem. The original rubber contacts were coated with what looks like graphite or carbon or some sort. Pretty much nothing sticks to the rubber or the carbon but I found that if I rough up the contact surface with an emery board, I can make small bits of aluminum foil stick with regular wood glue for several months. I put a drop of the glue on scrap paper, dip the tip of a toothpick into the glue and use it to pick up the precut foil. Hold the foil against the contact and pull out the toothpick. If your lucky the foil is not stuck on your finger but on the contact :-). Seriously, it's not that much trouble and beats the $80 cost of a new remote.

"Ron Banks" a crit dans le message

> I can make small bits of aluminum foil stick with regular wood glue for several months. I

Early computer keyboards were made like that. A foam pad under the key, then a small aluminum like conductive foil glued on the pad.

The keyboard PCB had the traces etched and "silver (?)" coated.

Syl

There is another way also which works a bit better.

Mix some graphite powder with a drop or two of varnish
on a piece of metal or plastic. Mix well, paint a
thin coat on the button, let dry overnight. Did a
remote with this technique and it's worked OK now
for 6 months. Also you can break open an old
redundant 100 ohm 1/4 or 1/2 watt carbon comp resistor
with needle-nose and extract and use the carbon from it
to mix with the varnish.

It is Thurs, 2:02pm EDT (1802z) and C-9B "JU 471" is heading home to NAS Norfolk, after stopping for some gas at Cape Canaveral AFS. He's using VHF ATC freqs.
"TALON" flights of T-45s are flying northward too, using UHF ATC freqs, including 380.3, 285.5, 269.25 and 251.15.
The offshore Whiskey areas have FANGs (F-15s) and SCOUTs (S-3Bs): 267.5, 284.5.
MAKOs and SHARKs (Homestead JARB F-16s) have been bombing and strafing at Avon Park Bombing Range, using 292.2, 264.625, 138.125, 139.8, 138.025, among others.
ICE acft OMAHA 85U is around, and NOAA 46 is working around Cape Canaveral. OMAHA 85U is a Piper PA-42, NOAA 46 is a DeHavilland DHC-6.
I also snagged "Gitmo 02" arriving at NAS Jax, planning to remain for a couple of hours.
Also AF RESCUE 50983, a Moody AFB C-130; AF RESCUE 231, a Patrick AFB HH-60G; and CG RESCUE 1705 are working a SAR in the area.

Another approach would be to use a button contact scavenged from another similar remote or even a calculator using the same kind of buttons. It's a rubber sheet with the molded contacts (at least what I'm thinking you might have). Cut out the bad button and either swap it with a button you never use, or sub a similar button from the scavenged remote/ calculator. When you do the cut, give yourself enough flat area outside the button to allow yourself area to glue or tape to keep it in place.

Super nifty, thanks. Some contacts completely deteriorate after a
couple of decades and trying to glue tiny bits of aluminum foil where
they're needed is a real bitch.

Sheriff Joe Arpaio (in Arizona) is doing it RIGHT!!:

He has jail meals down to 40 cents a serving and charges the inmates for them.

He stopped smoking and porno magazines in the jails.. Took away their weights.

Cut off all but "G" movies.

He started chain gangs so the inmates could do free work on county and city

projects. Then he started chain gangs for women so he wouldn't get sued for

discrimination. He took away cable TV until he found out there was a federal

court order that required cable TV for jails. So he hooked up the cable TV again

but only let in the Disney channel and the weather channel. When asked

why the weather channel he replied, so they will know how hot it's gonna be

while they are working on my chain gangs.

He cut off coffee since it has zero nutritional value. When the

inmates complained, he told them.....this is a good one....."This isn't the

Ritz/Carlton. If you don't like it, don't come back."

He bought Newt Gingrich' lecture series on videotape that he pipes

into the jails. When asked by a reporter if he had any lecture series by a

Democrat, he replied that a democratic lecture series might explain why a lot of

the inmates were in his jails in the first place.

One place is http://www.sandman.com/rubberb.html . Unfortunately, that vendor sells stuff for the telephone repair trade, and the portions may be a little large (2 vials for $25; each vial does "5 to 20 telephones" and needs to be used within 2 days) unless you line up the whole neighborhood's flakey remotes and telephones (for some reason, cordless telephones seem prone to this kind of failure) and do them all in one big orgy of repair. Be sure to read the tech bulletin linked to that page, it has a lot of tips for button repair.

Hi. If a particular frequency does not have a PL tone, just put in the frequency, that's it. I don't know about the CSQ stuff.

what i do is to use the conductive heater repair paint, let it dry pop it
off then reglue it using super glue.

If there is no CTCSS (note: PL is a Motorola trademark for their particular technology; CTCSS is the generic term), do not enter anything.

CTCSS = Continuous Tone Coded Squelch System.

The default of CSQ means Carrier SQuelch, or no tone used.

You do not need to use a tone for receive. It's optional. Very few public safety or other government channels are shared within a local area. Business channels are, and you may want to use tone to separate the plumber from the electrician on the same frequency if that is your requirement.

Few scanners even had CTCSS capability until fairly recently. And there is a digital version of CTCSS which is very common in the industry. If you see a number like 145 instead of a tone like 107.2 or 1Z, it's digital. CTCSS inplies analog.

Don't lose any sleep over it.

As Baretta (sp?) used to always say "If ya can't do the time, don't do the crime." NOW tell me, IF one of those scum bags killed one of your folks or raped them or something, would you care? NO..... At least not if you care about your family. I know I sure in hell wouldn't. NO ONE put those scum bags in there but themselves. But I suppose they're all innocent, right? BULL SHIT... I can't stand these Civil Libertarians. SOFT AS SHIT. Would they STILL feel that way if they had a gun to their head? Probably.... These god damned criminals do NOT deserve to be given all the amenities as they get at the expense of the tax payer. There are too many "decent and honest" people out here doing far worse off and could use half of what those cons get. I'm talking good food, medical and a roof over their heads.

Speaking of the Iraqis, at one point I HAD compassion for the Iraqis in the prison(s).... BUT AT NO TIME where they treated like the couple they've beheaded already. AT NO TIME, were their bodies dragged around and displayed

like some trophy. Now, I have ZERO sympathy for any of them.
Matter of fact, the Iraqis in Cuba, are being fed and looked after
medically, and that's better than many of our elderly are getting. THAT IS A
SHAME.

Sheriff Joe had balls, more than most. Some of the ACLU folks need to borrow
some for a change. If I were in Joe's shoes, I'd do the same damned thing.

Friday, 23 July 2004

DOS 117: UH-1N, US State Dept, Intl Narcotics Mission, Patrick AFB.
9:00am, 12:15pm: Local work.
[133.75, 335.8]

ASCOT 4749: C-130, Royal Air Force, UK
10:35am: Departs to CYQ.
[124.35, 133.75, 132.65, 124.8]

N696US: NA-265 Sabreliner, United Space Alliance, Houston TX (Space Shuttle Contractor)
9:46am: Lands Space Coast RAP.
[132.65, 118.9]

MAKO 11: F-16C, Homestead JARB, AFRC 482FW 93FS "Makos"
10:05am: Strafing at Range; working Placid MOA.
[292.2, 285.725, 138.125]

SHARK 21: F-16C, Homestead JARB, AFRC 482FW 93FS "Makos"
10:25am: Working at Range and Placid MOA.
[292.2, 139.8, 138.125]

NASA 969: T-38N #65-10329, NASA-Johnson Space Ctr, Houston.
11:17am: Lands NASA-KSC Shuttle Landing Facility.
[132.65, 128.55]

FRED 18: C-5A, Travis AFB
11:23am: Inbound to NASA-KSC SLF.
[132.65]

N21NG: LJ-35A, Northrop Grumman JSTARS Integ Facility, KMLB.
11:45am: Lands Melbourne IAP.
[132.65, 118.2]

KARMA 41
11:50am: Inbound MacDill AFB f gas-n-go; will return later and RON; rqsts crewbus for lunch transport.
[311.0]

SODA 81: KC-135E, McGhee-Tyson 134ARG 151ARS
1:15pm: Area transition; poss dep from X68 or XMR.
[132.65, 124.8]

TEAL 72: WC-130, Keesler AFRC 403W 53WRS "Hurricane Hunter"
2:15pm: Inbound MacDill.
[311.0]

MAKO 11: F-16C, Homestead JARB, AFRC 482FW 93FS
2:25pm: Work at Avon Park Bombing Range.
[292.2, 285.725, 307.1, 138.125]

MAKO 21-24: F-16Cs, Homestead JARB, AFRC 482FW 93FS
2:58pm: Work at Avon Park Bombing Range and Placid MOA.
[292.2, 285.725, 307.1, 139.8, 138.125, 303.15]

NASA 909: T-38N #65-10351, NASA-Johnson Space Ctr, Houston.
3:10pm: NASA-KSC Shuttle Landing Facility.
[132.2, 132.65, 128.55]

BOGEY 17, etc: F-5s, Several flights of 2-ships.
3:20pm-4:30pm: Area transition, Northward, probably coming from NAS-KW. My guess is these are VFC-13 birds. One flight might have been given "Direct Maxwell."
[317.6, 360.7]

PELICAN 71A: P-3C, Jacksonville NAS VP-45 "Pelicans"
3:43pm: Comms with Fiddle (NAS Jax); also air-air with CARDFILE 71B.
[285.0; 303.0]

KATT 615: T-1A Laughlin
3:44pm: To NAS-Key West.
[349.0]

GUNFIGHTER 27: F-14, Oceana NAS VF-101 "Grim Reapers"
4:02pm: Northbound; FL 370; probably RTB Oceana.
[323.1, 319.0, 256.875, 267.5]

NAVY 1E 054: HH-57, Whiting Field TW-5
4:38pm: Lands Patrick AFB.
[132.65, 133.75]

MUSTANG 01: P-51, Kissimmee A/p
4:30pm: Transition through Avon Park Bombing Range airspace.
[126.15]

NAVY 1E 117: HH-57, Whiting Field TW-5
4:57pm: Lands Patrick AFB.
[132.65, 133.75]

CARDFILE 71B: P-3C, Jacksonville NAS VP-45
5:02pm: Air-air with PELICAN 71A re dropping "smokers" on buoy, very low level; some secure comms.
9:06pm: Thanks RaginCajun for their work; bids farewell.
9:33pm: "ETA Jax 0230z."
[303.0, 285.0]

CORSO 79: C-130E, PR-ANG 156AW 198AS San Juan "Flying Bucaneros"
8:20pm: "Direct Nassau."
[134.0, 133.475, 132.15, 133.4]

KING 21: HC-130, Moody AFB 71RQS
9:35pm: Lands Patrick.

9:52pm: Departs, RTB Moody.
[132.65, 133.75, 124.8, 383.0, 139.3]
Probably picked up Moody pararescue crew who worked with Patrick troops in rescue of injured Chinese fisherman off Puerto Rico.

MADFOX 16: P-3C, Jacksonville NAS VP-5 "Mad Foxes"
9:20pm: "Direct NAS Jax."

AL STERN Satellite Beach FL (28-11N 80-36W) monitoring
Patrick AFB (KCOF) NASA-KSC Shuttle Landing Fac (KX68)
Avon Park Bombing Range (KAGR) Cape Canaveral AFS (KXMR)
JSTARS E-8 Acft Integration Facility, Melbourne IAP (KMLB)
Worldwide Military HF Communications
Life Member: Missile, Space and Range Pioneers.

Because it's an automated process. Look at the groups...they're in alphabetical order. And many newsgroups don't allow posts to more than a few groups at a time...hence they're sent out to only a few groups at a time to ensure that the post makes it through newsgroup filters. Some one wrote the program to do it, but there isn't an individual sitting out there somewhere spamming every single newsgroup in existence. It's a "bot". The question is, what ought to be done with the people that write these damned things? -Years- in jail, IMNSHO. Enough of this slap on the wrist B.S.. As for clicking on it, hey...there are a lot of new users out there. We were all newbies once.

986. FM, WFM, Or NFM: Which To Use Where ?

Hello:

Using a 780 and Butel's software.

Really confused over this:

I have a choice for each freq. I program to select either
FM, WFM, or NFM.

Which do I want to use, where / when ?
Why ?

Thanks,
Bob

Not likely...
The design of linux, and all Unixes make this pretty hard to do. The
OS is almost 30 years old and very mature.

Because there are enough non-computer savvy lusers running a insecure OS,
they simply become "low hanging fruit".

It's Penticton.

Also worth noting is that forest fire activity is not normally taken care of
by the local district fire department. There's no
"county fire department" as there is in many parts of the United States.
Forest fire fighting is taken care of by B.C. Forest.
There are regional volunteer departments which lend equipment. But the fire
departments work on a regional district basis.

Check with scanbc and look at the Southern interior forest map. The
frequencies are analogue, but in order to hear anything
it is best to key in all of the receiving frequencies shown on the map.

Aerial attack is usually done by fixed wing aircraft from Conair Aviation
which in times of forest fires in the region will
use Penticton Airport which is to the southwest of town.

Ambulance is seperate as EHS (Emergency Health Services) operates on
seperate frequencies. The RCMP use their own,
and analogue.

www.scanbc.com will be able to provide frequency information

Good luck and be sure to grab a few Okanagan peaches when they are
available.

Deemed a grammatical error. The English grammar system stipulates that the use of the letter "I" will be capitalised when used in the instance of the first person.

Hi Bob!

Most all of what you'll be monitoring will be NFM (Narrow Frequency Modulated). This would include police, fire, ambulance, tow trucks, some armature radio, taxies, marine, etc. Commercial aircraft, and some military aircraft, will use AM (Audio Modulated). WFM (Wide Frequency Modulated), is mostly used standard FM broadcast, like you listen to in your car, and T.V. Although there are other uses, including some military, as I recall. Most all scanners that allow you to change this mode, will default to the normal setting, by band, and frequency.

"LANT" is what the redneck cleans from a dryer filter at the laundromat.
;-)

Others say it to mean "Atlantic". PAC means Pacific. Nav & CG both use it
to reference the command structure for that area of operations..

Source record: 19319

It's time to turn the tables. While checking the ECPA laws in an attempt to find out what is legal to listen to and what isn't, I came across this portion of the ECPA which proves that states that have any kind of ban on listening to the police (even while mobile) is a violation of the federal ECPA law

g) It shall not be unlawful under this chapter or chapter 121 of this title for any person--

(ii) to intercept any radio communication which is transmitted--

(II) by any governmental, law enforcement, civil defense, private land mobile, or public safety communications system, including police and fire, readily accessible to the general public;

---
g) It shall not be unlawful under this chapter or chapter 121 of this title for any person--

(i) to intercept or access an electronic communication made through an electronic communication system that is configured so that such electronic communication is readily accessible to the general public;

(ii) to intercept any radio communication which is transmitted--

(I) by any station for the use of the general public, or that relates to ships, aircraft, vehicles, or persons in distress;

(II) by any governmental, law enforcement, civil defense, private land mobile, or public safety communications system, including police and fire, readily accessible to the general public;

1005. ECPA contradicts itself

Newsgroup: rec.radio.scanner

Cordless telephones operate on authorized frequencies for them in the 900 mhz and 2.4 ghz amateur radio bands.

The ECPA says that it's against the law to listen to these phones, but the ECPA also says:

(g) It shall not be unlawful under this chapter or chapter 121 of this title for any person--

(ii) to intercept any radio communication which is transmitted--

(III) by a station operating on an authorized frequency within the bands allocated to the amateur, citizens band, or general mobile radio services; or

1006. Andrea Hartlage (KG4IUM) named 2004 Amateur Radio Newsline™ Young Ham Of The Year

Newsgroup: rec.radio.scanner
Date: 2004-07-25 18:08:49 UTC
From: radionews@aol.com
Message-ID: <20040725140849.26512.00002197@mb-m03.aol.com>
Source record: 19321

Andrea Hartlage (KG4IUM) named 2004 Amateur Radio Newsline™ Young Ham Of The Year

(Los Angeles, CA) She is 15 years old, about to become a sophomore in Grayson High School in Grayson, Georgia where she holds a 96.41 Grade Point Average and has dedicated the last four years of her young life to serving the needs of her community and its youth through Amateur Radio. For that reason and many others, Andrea Hartlage (KG4IUM) has been selected to be the recipient of the 2004 Amateur Radio Newsline™ Young Ham of the Year Award.

Andrea was first licensed in 2000 and currently holds the Amateur Extra class which is the top of the line. She credits her father with kindling her interest.

"My dad interested me, he introduced it to me, Scott Hartlage, KF4PWI and he introduced me to Amateur Radio - I guess it was four years ago," she says. "I just sort of got interested in the public service side and I also serve as net control and I enjoy doing that and all the other things." (A "net control" is the person in charge of a group of ham operators performing emergency or public service communications.)

Andrea has been quite active since getting her FCC license just four years ago.

"I do a lot of public service with parades and different types of marathons and things like that," she says. "I write the youth column for ARRL website...I'm assistant section manager for youth of the Georgia section and I'm a member of several local radio clubs." The ARRL is the American Radio Relay League, the National Association for Amateur Radio, based in Newington, Connecticut.

Among her many achievements, Andrea has served as an instructor at J.E. Richards Middle School Amateur Radio Club as part of the "ARRL Amateur Radio Education & Technology Program." The program's goal is to improve the quality of instruction by providing an educationally sound curriculum focused on wireless communications. The project emphasizes integration of technology, math, science, geography, writing, speaking and social responsibility within a global society. Andrea's instructional work at the J.E. Richards Middle School Amateur Radio Club was part of the pilot program.

But Andrea's work in the area of recruiting youngsters into the Amateur Radio hobby goes far beyond her local community. She is an

internationally known writer with a monthly on-line column titled "Youth@HamRadio.Fun" and also authors a similar bi-monthly column for the Young Ladies' Radio League (YLRL) Newsletter, YL-Harmonics. As a public speaker she has appeared at the Dayton Hamvention Youth Forum in Ohio and continues to promote the hobby to youngsters at local hamfests, club meetings, and other public events.

In the area of public service, Andrea has already completed the ARRL Emergency Communications training course and serves as the network control station for several regularly scheduled on-the-air emergency communications training sessions. These include networks sponsored by the Gwinnett Amateur Radio Society and the Gwinnett County Amateur Radio Emergency Service (ARES). Andrea also was the control station of the GEMA/ ARES Net for activation during the G8 Summit Conference. On the technical side, Andrea has already used the skill she learned through Amateur Radio to build communications gear for the September 2003 World Canoeing and Kayaking event.

Andrea is a member of several prestigious hobby radio organizations including the ARRL and YLRL mentioned above, the FISTS Club (an international organization dedicated to the preservation of the historic Morse Code), the Gwinnett County Amateur Radio Emergency Service, the Gwinnett Amateur Radio Society (GARS), the Alford Memorial Radio Club, the A-1 Operator's Club and scouting Venture Crew 73.

As to her future, Andrea says Amateur Radio and all the opportunities it has given her, also has opened her eyes to some career possibilities.

"I'm possibly thinking about some kind of journalism and writing these (ARRL) columns helps me develop writing skills," she says. "And, I'm also thinking about some type of communication field that I really enjoy, like, for example, serving as net control and learning how to communicate effectively."

At the end of her freshmen high school year, Andrea had all A's, placed 7th in her class of 664,. She takes all "Gifted Level" courses and will be taking "Advanced Placement" next year.

The Amateur Radio Newsline™ Young Ham of the Year Award will be presented to Andrea Hartlage on Saturday, August 16th, 2003 at the Huntsville Hamfest in Huntsville, Alabama. The award ceremony will be co-hosted by Bill Pasternak (WA6ITF) of Amateur Radio Newsline™, and YHOTY Award Committee Chairman Mark Abramowicz (NT3V). Also present at the ceremony will be representatives of corporate underwriters Vertex Standard USA, Inc. and CQ Magazine. The presentation of the award as a regular feature of this prestigious Amateur Radio convention has been made possible through the generosity of the Huntsville Hamfest Planning Committee and its Chairman, Walter "Scotty" Neustadter, (W4WW).

As "Young Ham of the Year," Andrea Hartlage, will receive -- courtesy of Vertex Standard USA -- an expense-paid trip to the Huntsville Hamfest, along with a gift of Yaesu ham radio equipment. CQ magazine will treat Andrea to an expense-paid week in Spacecamp Huntsville, and will present her with a variety of CQ products. Amateur Radio Newsline™ will provide Andrea with a commemorative plaque at the award ceremony. The cost of year's plaque has been underwritten by Dave Bell (W6AQ) - President of DBA Entertainment Inc., Hollywood California.

The corporate underwriters of the "Amateur Radio Newsline™ Young Ham of the Year Award" are world leaders in their respective areas of Amateur Radio product support. Vertex Standard USA, Inc. is a trailblazer in the design, manufacture and distribution of high quality YAESU Amateur Radio and commercial two-way radio equipment. CQ magazine is considered the trend-setting publication serving today's modern radio amateur.

The Amateur Radio Newsline™ Young Ham of the Year award program, (formerly the Westlink Report Young Ham of the Year) now entering its 20th consecutive year, is presented annually to a licensed Radio Amateur (Ham) who is 18 years of age or younger and who has provided outstanding service to the nation, his community or the betterment of the state of the art in communications through the Amateur Radio hobby/service.

Past recipients of the Young Ham of the Year Award, all of whom epitomize the heart of dedication to their nation include:

Shawn Alan Wakefield, WK5P, of Bartlesville, Oklahoma (1986)
David Rosenman, KA9PMK, of Muncie, Indiana (1987)
Jonathan Binstock, NK3D, of Potomac, Maryland (1988)
Erin McGinnis, KAOWTE, of Topeka, Kansas (1989)
Mary Alestra, KB2IGG, of Staten Island, New York (1990)
Richard S. "Sammy" Garrett, AAOCR, of St. Louis, Missouri (1991)
Angela (Angie) Fischer, KBOHXY, of St. Louis, Missouri (1992)
Kevin Boudreaux, N5XMH, of New Orleans, Louisiana (1993)
Allison Zettwoch, KD4CKP, of Louisville, Kentucky (1994)
Adam Weyhaupt, N9MEZ, of Alton, Illinois (1995)
Toby Metz, KB7UIM, of Boise, Idaho (1996)
Brian Mileshosky, N5ZGT, of Albuquerque, New Mexico (1997)
Richard Paczkowski, Jr., KF4BIA, of Edgewater, Florida (1998)
Michelle Swann, KE4EZI, of Warner-Robins, GA (1999)
Christopher Arthur, KT4XA, of Russellville, AL (2000)
Patrick Clark, KC8BFD, of Charleston, WV (2001)
Josh Abramowicz, KB3GWY, of Reading, PA (2002)
Jay Thompson, W6JAY, of Santa Ana, CA., (2003)

The award sponsors wish to also thank CQ magazine, Worldradio magazine, QST magazine, the ARRL Letter, and the Radio Amateur Information Network for their generosity in assisting in soliciting nominations for the 2004 award.

For Sale Mint Cond Xplorer
(Full Coverage, No Gaps)
$550.00 + $10 sh
Mike

Features
. High speed FM communications nearfield receiver, sweeps range of 30MHz to 2GHz in less
than one second
. Frequency blocks: Program up to 10 different frequency ranges to sweep or lock out
. Two line LCD displays frequency and either CTCSS, DCS, DTMF, or signal strength
. Built-in VFO mode for manually tuning to a specific frequency
. Super Sensitivity: Receive two-way communications up to 1/4 mile away
. Automatically record up to 500 frequencies in memory with number of hits, time and date
. Manually record CTCSS, DCS, DTMF and Signal Strength into memory
. Built-in PC Interface for memory download/PC interface cable and download software included
. Real-Time Clock / Calender with battery back-up
. Lockout Feature: Up to 1000 individual frequencies can be locked out of reception
. Internal Speaker, Audio earphone/headphone jack
. Includes Built-in NiCad Batteries with 5 hour discharge time
. Separate volume and squelch controls

Technical Specifications
Frequency Range 30MHz to 2GHz
Resolution Fixed 100Hz +/- 500Hz accuracy
Modulation FM
Frequency Response 50-3000Hz
Input Impedance 50Ohm
Size 3" W x 5.25" H x 1.6" D Weight 12oz
Sensitivity 100uV@500MHz
Inputs 50OHm, -59dBm @ 100MHz, -25dBm @ 1GHz
Outputs Internal speaker, audio headphone jack, RS232 jack, CI5 jack
Power 9-12VDC 350mA center positive
Battery 5 cell AA NiCads / 4-5 hour battery life
Display 2x16 alphanumeric LCD with EL backlight

simultaneously?

yes
but everyone with the same tone code, will here everyone else & be heard by
everyone else

> 2. Can scanner detect CTCSS initiated signals?

yes, because most scanners do not have an CTCSS setting.
on those that do, you would only here transmissions of the same code as that
you have progged the scanner to receive

1011. Help identify Motorola Radius P110?

Newsgroup: rec.radio.scanner
Date: 2004-07-25 20:35:24 UTC
From: Bill Crocker <wcrocker007@comcast.net>
Message-ID: <BeGdnbjuGdAVhJncRVn-qg@comcast.com>
Source record: 19326

I have a Motorola Radius P110
Model # P43QLC20D2AA
ABZ99FT3021
10919310441
HUD3311A

I believe it to be VHF, 146~172MHz, but I'm not positive. It's had an 8-CH selector. I'm not sure of the wattage. Can anyone help with identifying this radio? Also, are there any programming services in the SE Michigan area? I would like to get it programmed to the new MURS channels, if this is legal.

Thanks,
Bill Crocker

Nope..your getting very feeble! most of VHF/UHF Amatuer radio is narrow band
"FM". The only AM operations are a little on 160 meters and 6/10
meters....your dead wrong WC.

No, you missed MY point.... He misspelled Amateur with Armature. I corrected it. He called AM - Audio Modulation. I was correcting him by saying AMPLITUDE. As for the rest, I know and agree. THAT wasn't what "I" replied to. Read the post again, you'll see. So, NO, I don't think I am getting very feeble. I'm dead RIGHT. WC

1022. Oregon Scientific 433 MHz Temp/Humidity Transmitters

Newsgroup: rec.radio.scanner
Date: 2004-07-26 03:09:33 UTC
From: DougSlug <dougslug@hotmail.com>
Message-ID: <NB_Mc.10745$ps5.3245741@news4.srv.hcvlny.cv.net>
Source record: 19337
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Any idea what data mode/format is used by the Oregon Scientific 433 MHz temperature/humidity transmitters? It sounds like two short bursts about every 45 seconds. I thought it would be interesting if these could be decoded via a sound card in the PC for logging purposes. I've got a few set up already, and rather than purchase a more sophisticated setup, I could whip up a Windows app for fun...

- Doug

I was using Google Groups to track this thread and it turns out I missed like 1/2 the posts!

How can I view this thread in it's entirety? This is the guy running the scanner ...

And based on what someone said about the Criminal Code ... I dunno, I might take it down. It's eating too much bandwidth anyway. We'll see.

Bzzt, you lose... Thanks for playing farina...

You're correct on the last dribbles of AM, however...

WC was correcting the OP from "Audio Modulation" to "Amplitude
Modulation."

Martin,

A discriminator tap is made in a scanner so one can use the unfiltered audio signal. This is important if you are using a computer program and sound card to decode various tones such as fax, weather fax, DTMF tones, etc.

It sometimes works using the tape out or line out or earphone jack, but the standard audio filtering may or may not mask what is needed. Most scanners can easily be modified to provide a discriminator tap point. It is also unsquelched.

This site will give you some information:
http://homepages.ihug.co.nz/~Sbarnes/pocsag/mods.html

Regards,

Joe

Cross-posted to: alt.radio.scanner,rec.radio.amateur.homebrew,rec.radio.scanner,sci.electronics.design

Hello everybody,
I wonder if anyone has already tried to receive the signal of NDB beacons ?
These are long-range radio beacons, used by aircrafts for navigation,
operating in the frequencies from stg like 200 to 500 KHz I think. Their
signal is AM-modulated with a sound signal of their code (three letters) in
morse.

It would be an interesting project to build a receiver and ADF for these
beacons, but I'd like to know if anyone has already tried that.

Thanks for your answers ;-)

Some AM radios for the Swiss market go up to 285 kHz on the LF band.
Some beacons can be heard. You can modify an MF radio to receive 250 to
420+ kHz, but you can't get too close to the IF, which may be 450, 455,
459, 468 (+ n x 9 kHz) .... kHz.

The receivers are dead simple. You have so much atmospheric noise that
it's hard to make the receiver noisy enough to matter. Antennas are
usually amplified capacitive probes for omnidirectional, or the
traditional loop for RDF.

I read in sci.electronics.design that Tim Wescott
<tim@wescottnospamdesign.com> wrote (in <10gaofq3iuq6q25@corp.supernews.
com>) about 'Receive NDB beacons ?', on Mon, 26 Jul 2004:

>I never knew about the 450 + n x 9 business -- do you know why that is
>so?

European LF and MF transmitters have been on 9 kHz channel spacing since
soon after WW2, but in the 1970s (IIRC) the frequencies were made
multiples of 9 kHz, which is why the Droitwich transmitter changed
from 200 kHz to 198 kHz. At that time, we (the European setmakers)
studied whether to standardize the IF at a multiple of 9 kHz or an odd
multiple of 4.5 kHz. It was found that whistles, due to various high-
order effects in receivers, were minimised if the IF was a multiple of 9
kHz.

The next step was to look at *which* multiple of 9 kHz minimised image
interference problems between LF and MF transmitters (France had three
LF transmitters at that time and UK and a number of other countries had
one each). It was found that 450 kHz was the best value, but many
setmakers had used, and some continued to use, 459 kHz and other
frequencies.

One other advantage of 450 kHz was that miniature IF transformers made
in the Far East for 455 kHz for the US market could be tuned down to 450
kHz, maybe with a few tens of pF of added capacitance, whereas they
would not tune up to 459 kHz.

455 kHz is particularly bad for UK, because of the BBC transmitter on
909 kHz. It is subject to (theoretically) 1 kHz beat note interference
with the second harmonic of the IF, radiated into the antenna from the
detector circuit.

Tim,
Let me take a wild guess that makes sense. You want the local oscillator frequency to be a multiple of 9 KHz (The EU channel spacing) to make it simpler to design the PLL. Seems that 450 would work with both 9 and 10 KHz spacing.

Are they still using the NDB stations? seems kind of redundant with VOR, that has been around for 50 years or so.

Yes. Do a web search for 'LOWFER' and you'll find a *lot* of interesting things.

Briefly: My Sony 2010 multiband receiver tunes down that low, but reception is poor. It's much better if I use a longwire antenna _and an antenna matcher_ (inductor and capacitor) to tune to the desired frequency. I can get ZBB (Bimini, Bahamas) from my home in Athens, Georgia.

Longwave radios from Europe will tune part of this band; it's used for broadcasting over there.

I get my best longwave results with my Icom R71a and EWE antennas. I have logged Eu, AF, and Iceland broadcasters with the EWE but they were undetectable with any other antenna. I enjoy chasing the Canadian Aero NDB's because they are slightly off freq of the US stations ... 136 heard so far, all provinces except NWT, Yukon, and Nunavut.

> even (433.000) or 433.150, 225, etc.?

433.92 megacycles. That frequency first started as a remote control frequency in Germany, and spread from there. It is a standard frequency for manufacturers of SAW (Surface Acoustic Wave) resonators, which are single chip devices used to generate the frequency directly. Look at RF Monolithics or Toshiba's websites for details on SAW resonators.

Yes, 433.92 megacycles is in the amateur (ham) 70 cm band, in fact on amateur television frequencies.

Others have already provided an excellent range of answers, so I
just had to jump in with a nitpick. :-) I speak both as a former pilot
and as a long-time hamateur.

The phrase "NDB Beacons" is redundant. 'NDB' in this context means
'Non-Directional Beacon,' so the correct presentation of the term would
have been "NDB's" or "ND Beacons."

Perhaps its a beacon transmitting information about NDBs - hence an NDB beacon.

But thats not important right now, if you're going to be picky then NDB's is reference to something pertaining to the NDB eg the NDB's code generator had a loose chain.

I remember working on one (20yrs ago) where it was is a full height 19" rack and the bottom unit was indeed a motor with 'sophisticated' cam and chain system where you programmed the actual code to be transmitted by adjusting the stators/rotors. I've not seen one since - I guess its the size of a shoebox now?

73's intentionally mistyped :)

1058. Re: Receive NDB beacons ?

Newsgroup: rec.radio.scanner

I have heard over 800 NDBs in 30 states and 26 foreign countries from my location in central North Carolina over the years. I have used the stock Icom IC-71A and Sony 2010 radios and usually long wire antennas. I have done dxpeditions to the coast of NC and a pinnacle (2000 ft. tall rock, Pilot Mountain) in western NC which has added some new ones in the log from time to time. My expereince with NDBs goes back to the late 60's with a US Navy WWII long wave radio which was a lot of fun but a real "hoss" of a radio. Through the old Prodigy computer system before the wide use of internet I met a hobbyist i California and had a good time comparing notes on what we were both hearing. I hav found over the years that the best time to listen is in the Fall of the year, just before dawn, when the weather begins to change rapidly with the onset of frosts. Of course you must be able to copy CW (Morse code) and that's a lost art. The internet has been a great resource for identifying NDBs and there are several sites with a lot of good information. You might try www.airnav.com. The Lowdown was a useful publication of the pre-internet day and back copies would be an asset to anyone with an interst in NDBs. As an amateur radio operator I have worked over 300 countries and spend most of my time on amateur satellites now but the hunt for a new NDB ranks right up there with some of the best time I have ever spent with the hobby. This has been one of the more interesting strings on this group in some time and it sure would be nice to keep it going with others posting their experiences. pcox

And Unidens aren't junk?? LOL, I've had no problems with my 93, and
nobody I know has had problems with their 93's or 95's.

Can't say the same for Uniden. QC is not something they seem to pay much
attention to..

The early 92's were pretty bad though.

Just like "using your PIN number at the ATM machine".

Tim.

I took a listen on the Icom 756. Heard about 4 NDBs very weak, and a bunch
of stations that sounded like RTTY.

Tam

Now that people say "ATM machine" we should abbreviate it "ATMM."

Then they can say "ATMM machine"...

1069. ICOM R7100 DC Power Connection Question

Newsgroup: rec.radio.scanner
Date: 2004-07-27 17:04:21 UTC
From: Chris Anton <canton@mail.island.net>
Message-ID: <pWvNc.127506$ek5.76349@pd7tw2no>
Source record: 19284

Can anyone help me with information about the specific wiring for the DC power connection for an Icom R7100 receiver. The plug is a standard 4 pin plug but I have no information about which of the 4 pins is + and which is -. When running on AC there is a jumper in place which connects two of the pins together. Unfortunately the manual provides no information about which pins and what polarity need to be connected for DC operation.

thanks
Chris

The Parnass program you reference is not a DOS program. The link you give provides info on the program, including the fact that it runs in windows, when the support software is properly installed.

Any BC453 receivers left in those junk boxes? I have a BC1206 that
hasn't been converted, if anybody really wants it we can haggle.
(covers 200-400khz, runs off 28vdc all loktal tubes with 28v on the
plates!).

You can try putting padder caps in parallel with the tunning cap in
an AA5 and re-align it to cover part of the 200-400khz band. I
tried that once and was able to pick up a close by NDB. Hint:
go down to the airport pilot shop and pick up a sectional chart. The
NDB's are listed on the chart, where they are located and their call
signs and frequencies. This will give you an idea what you can pick up.

Yes, but I haven't heard of any new ones recently. They were relatively cheap to install (at least the ground equipment), but now new installations go toward GPS approaches which require no ground equipment and are more accurate. Still, the old NDB approaches work and are common especially at smaller airports.

no you alone cannot submit it.

but if it is toward a legal case / matter involving the correct authorities,
then they will accept it from you as evidence 'as is'.

if it is within your own home, on your property and you are the legal owner
of all the equipment involved, then you are breaking no laws, unless you
divulge the contents to another 'third party'.

you should however be aware that the validity of such evidence might well be
seriously scrutinised if it 'were' used, let us say, in court, as it cannot
be guaranteed as authentic as it was not obtained directly by said
authorities.

I agree with the Pro-92 (firmware Version 1) being a POS.

The new Pro-96 is made by GRE, which I think is a big change. I have been reading the Yahoo Pro-96 group for months and have seen very little problems. The Pro-96 has great reviews.

One big plus over the Uniden scanners is that the Pro line take AA batteries.

Brian

Uniden BC-245XLT and AOR AR8000 owner.

Gonna buy a Pro-96 in Oct.

It's the crappy software not the computer. I receive all those modes and
more using things like TalkPCR and MixW with out a hitch. The PCR will even
track trunk system using TrunkPCR. Bonerito doesn't even know what teunking
is ;). It runs on my computers , that is not the problem, as you point out it
is a resource hog, and it also has a memory leak in it that over time will
cause the system to slow down and finally lockup. It is the only PCR control
program I have used that does this, everyone, including ICOM, has figured out
how to do it properly. THERE IS NO SUPPORT WHATSOEVER from the arrogant bunch
that wrote it except to try and upsell you to a newer version. As for being
complicated, not really, but it does have a messy interface that complicates
operations uneccessarily.

Bottom line don't waste your time M8 its a piece of crap through and through.
Only good thing about it was it was "free" with the purchase of the receiver.

OK, here it is
Scanning New Jersey State Police
MOT Type 2
Pro 95
The radio "sticks" on ID# 36336, squelch opens, get noise.
ID is locked out, no help
I locked out the sub group
No help
This is all in open mode.
If I go into closed mode, the radio does not stop on anything!!!
And yes, I have a bunch of talkgroups defined.
So the radio is basically useless if I need to keep punching the scan button
to get it to work.
I also have another MOTO bank, and an EDCACs bank, do not have this problem.
It looks like something the system is transmitting, but I can't seem to
lockout the open carrier
HELP!

Bruce, I hate to say it, but resetting the radio may be your best option IF you have carefully checked each frequency and the MOT type, and each talk group, etc and they are all valid for that fleet. You could try deleting the offending ID before you get that drastic though.

Good luck,

Jack
Virginia Beach

Most of the time, if you call your local police department and ask to speak to the TAC officer, he or she will be happy to provide you with the software. Just give them your home address and the times you will be home and I am sure they will personally deliver it.

Just installed ARC780 demo. Ran it once then when I tried to run it again I received this message.. Hello. I downloaded ARC780 demo to try it with my 780. when I try to run it
I get a error message that reads "MEM780.exe CheckSum Error:E54F"

I deleted the directory and removed all instances from the registry and deleted the winsoc7.dla from the windows system directory. rebooted and all that and reinstalled the program. It does the same thing.

running windows xp pro 1 meg memory..

any suggestions would be appreciated..

Thanks..

The program is a little buggy when the pass-key and ID are entered in the demo-system to register the product. But after that it shaped up and flew straight. Maybe it's an old demo that doesn't like Win XP?

I've just started an interest in NDB DXing.

There is a good list you can join.

Go to:

http://www.beaconworld.org.uk/info.htm

Download the welome pack and then open up the FAQ. That tells you how to
join the list.

I've got a circuit for a NDB RX if you want to look at it. It's in PDF
format.

Other links I found.

You can donate the phones to groups like a battered women's shelter to call
911 (as you don't need service for this.)

This error means you used a code posted on usenet long time ago, and the
butel guys blocked that code. They explained that in a 780 yahoogroup.

Just buy the software, it's worth every penny.

Or buy some xTra memory for your PC, XP will not like 1 meg memory..

It's not on the WWW, it just mentions it.

I tried sending it you, but the email I used was no good.

The new Uniden BC898-XLT scanner is appearing on dealer's shelves, and available for shipping. Average prices seems to be around $219.00. This is basically an improved BC895-XLT, one of my favorites!

Turns out the GRE scanners can only lockout TG ID's in closed mode! So it
took me a while to figure out why closed mode would not work - I had turned
off sub bank 00, so no ID's were registered!
Now it works fine, but it is a lousy feature - should be able to lockout a
TG in open mode, the Bearcats do.
The ID I receive is either a DATA channel, or maybe an MDT, so it is always
active, but anyway I got it solved

I have a handheld Realistic Pro-39 scanner that I am wondering if it can be modified to receive cellular phone frequencies. I had a base Realistic scanner years ago that was modified to pick up cell phones but I'm not sure how it was done and whether or not this little portable can be modded. The old base made for some interesting listening on the cell phones. Thanks for any info.

Hello again,

Here's an update, maybe someone can help.. I downloaded the ARC780 software from the main website. $40.00 worth. got the password and reg number. I removed everything from my computer. the arc 789 directory, anything in the registry that had to do with arc 780, the winsoc7.dla from the windows system directory, rebooted and reinstalled the program. when I try to run it I get the same error message. I took the same program and installed it on my lap top and all works well so there has to be a corrupt file or something on my big computer that the program doesn't like. Anyone??

IF you really did purchase it from Gommert Buysen, then contact him
for assistance. If you are trying to use an unlock code you found on
the net - that would explain your problem. So, bottom line, contact
Gommert for help

If you could spend $40.00 more you can get in front of a Radio Shack Pro-95.
It covers just about everything analog
except celluar and is trunk capable. One of the best things about this pup
is that it has alpha numeric tagging that can
be programmed and is very sensitive. I've picked up things on it that the
Uniden BC780XLT can't on the regular VHF
frequencies.

FT-50 is SMA male to BNC Female.

BTW the bag from a "bag phone" makes a great enclosure for an APRS tracker.

911 access is a federal mandate for ALL cell phone technology. A 3Watt bag phone makes the best emergency phone out there since AMPS cellular is now going to be around for another few years. The FCC just reuped the sunset law on AMPS for another few years. It's not going away yet.

Awww, India one of the dirtiest countries you will ever go to never kill a rat if you see one running down the street or a cow for that matter, as those are the countries national animals, Bombay had a airport that was less than a year old when we flew through there and there was more garbage on the floors than in the garbage cans, they never clean up after themselves, as for any electronic devices it could get your hands lopped off, a scanner is a NO NO in India, that is looked on as spying, but if your say flying to another country Don't turn it on in India.

Peace

Jim, I had an experience with a TRANSCEIVER (not a scanner) on a trip to Israel in 2000. I was detained at Miami International by
El-Al airlines for TWO HOURS. They had me keep the radio and other electronic equipment in their vault in Miami until I returned!

Considering the 'environment' today you may want to do something like contact the India Embassy (Washington DC?) and ask them what
the rules are for carrying scanners. Furthermore, India IS an impoverished country and I've heard one MUST be VERY careful when in
that country with 'western' material goods (like a scanner) and/or MONEY. It is supposedly EASY to be mobbed by people there.

Some people have traveled overseas with NO problems, I heard this repeatedly; but when in doubt, CHECK IT OUT; and how does that
other saying go .. better safe than sorry!

I'm going to have to check that place out some time.

Another source: the store we love to hate, Radio Shack. Part number
278-144, price $3.99, and Chinese-made, I think. Pic on page 217 of
the 2002 catalog.

A local electronics store did not have these in stock, but it could
special order them, at a price lower than RS charges.

When I see those old bag phones at yard sales or left out for the
trash, I try to get them. More watts output power than you'll get from
any other phone.

The PRO-96 is on sale at Radio Shack for $450 now. You could use the $50 left over to buy a Scantenna from Grove.

I have a Pro-2035 that I never use anymore, it is sitting here collecting dust.. It is in good condition with the discriminator mod using RCA connectors for NFM and WFM, which works fine. It is a Canadian model with the full 800 Mhz blah, blah, blah. Just curious, if I where to sell it what would be a fair asking price?

Radio Shack is Radio Shack. But it's the same scanner either way...Grove also sells the same model for $50 more. Personally, I would choose Radio Shack because it's easier to return it, not to mention that it's cheaper there, and, depending on your location, you could have one today. Just keep the receipt and all original packaging materials, etc. in case you have to return it.

Discriminator tap on a BC250D Scanner/pictures

Does anyone have either color and/or black and white pictures of what a discriminator Tap looks like on a BC250D Uniden Handheld Scanner, I am not looking for a schematic on how to do the discriminator tap but would rather see any pictures of what it looks like inside the scanner. Any information on the subject would be greatly appreciated.

Regards,

Steve

Carol, the Pro-93 is a great little radio, one of the best handhelds I've owned for what it does. But while the '93 _can_ shift modes (AM/FM etc, and the 895's can't - not sure about the new 898) the Pro-93 cannot receive anything in the 225-400mhz range, which many hobbyists will not live without. Pro-93 only has 300 memories and 1,000 trunk-ID's: more than enough for public safety monitoring that it's designed for. The 898 should have 1,000 mems (same as Pro-95).

The new Uniden BC898T has 500 memory channels.
It's a good performer and quite a good value when
priced below $230.

Thanks Bob - do you know if it will be able to shift modes? That would be the only improvement they need to make in that scanner to be a really fine piece of equipment imho. The 200 extra memory addresses are nice, but if they come at the compromise of now using 50-mem per channel (A,B,C, etc) that is too bad. 30 mems per channel meant the 895 at 100 mem/sec was the fastest scanner on the market. And in some areas that was just fast enough!

The LF data signals are DGPS (Differential GPS) signals. Google dgps,
lots of civil engineering/survey folks use it. In conjuction with a
regular gps receiver it makes for incredibly accurate measurements.

If you can find one in decent working or rebuildable shape, look for
a BC-314 (12 vdc) or BC-344 (120 vac) receiver. It tunes from 150kc to
1500kc,and is the best darned AMBC/NDB receiver I've ever had, will even
dig out stuff my R-390 and Super Pro can't hear, plus it goes down lower
in freq. Used one from the 70's through the mid-80's then foolishly gave
it away, just recently found another. The BC-1206 is not a bad little
RX, but is a very "simple" set, even compared to the BC-453.

What type of conversion were you going to do on the 1206? I remember
solid-stating one years ago. I have the stock schematic if anyone needs
it BTW. Email me direct, not with the email shown on the top of the
post, though. Actual email address can be found on QRZ.com under NU4G.

The Non Directional Beacon thread got me to thinking about this
very inexpensive kit I just built. $12 each, 2 for $22.75, shipped.

http://home.att.net/~jacksonharbor/lfconv.htm

Simple to assemble kit, works well, though I had to add
a few more poles of LPF in front of it to get the AM broadcast
out. The guy gives you your choice of crystals for whatever
band you want to upconvert to. Manual for the board is on
the site. I highly recommend this, especially for folks just
starting out exploring LF and VLF - this upconverts from a bit
above 10 KHz to 500 Khz. Surprisingly enough, there is still
lots of signals to hear down there. Go to lwca.org for more
information and links to VLF and LF info.

I'm looking to buy a cordless phone. I'd like a recommendation on a reasonably private unit. I don't want people with scanners listening to me. My old phone had scrambling and digital spread spectrum at 900Mhz. It also had a nice digital message machine. It was made by panasonic. I'd like to get a unit that has an extra hand set and charger base. The main base should have a keypad for dialing.

If you can recommend a phone or a website that deals with privacy and cordless phones, let me know.

Thanks

I agree with this recommendation. I was able to pick up mine on sale last
year for $150.

Check with Universal Radio Inc. in Columbus, Ohio.
These people are great and they also sell reconditioned unit.
You can reach them at: (800) 431-3939
www.universal-radio.com

I purchased a BC245XLT about 4 years ago for $129.00 and
haven't had any problems.

How can it be so much cheaper in Canada? It typically goes for $500 or so
through most online retailers.

Panasonic also makes some 2.4 GHz DSS phones that have all the features you are seeking. Basically, phones that operate above 1.3 GHz are out of the range of most scanners. It's easy enough to get a receiver that goes up to 2.4 GHz, but if the phone operates with digital spread spectrum, even a high-end receiver won't decode it.

It's odd that the Uniden web site makes no mention of this feature. It does say it has AM/FM/NFM capabilities, but it does not indicate they can be chosen, or overridden, buy the user. Nor does it mention coverage of the AM military aircraft band. I should have one later this week, so I'll post an update.

Thanks,
Bill Crocker

The main thing is discretion, i have taken my AR8000 to Spain, Tunisia, Greece, Holland and South Africa, i have never been asked to show it even though i carry it in my hand luggage.
When i leave theUK i always try to program in local broadcast stations, easily obtained off the net, so that if asked by customs to switch it on the first thing up is the local radio station.
Obviously when using the scanner abroad do not keep it on show , like in the UK it's "look what i've got", keep it out of sight and use an ear piece to listen so as not to attract attention to yourself.

I think you mean "112" - not 911.

Either way, unlike a GSM phone, if your AMPS phone is not connected to a
network then you cannot make emergency calls.

I see you're getting in the bad habit of spreading misinformation again, Nelson. First it's the $290 BC296D, then it's the DJ-X2000W (which only receives up to 2150 MHz) for monitoring digital spread spectrum transmissions. Haven't you got something more constructive to do?

lol oh really, well we have some other tricks they have going here, for example, PST GSt and soon to be GWC taxes on every dollar we make, PST and GST are 15% on the buck and Soon in November we will have the GWC another 8% on top making it the worst taxes we have seen sence the tea party, and do you think most Canadian will say ok, well your right most don't have a back bone anympore and they will be lied into believing it will be short lived and next thing you know it will be a law so they won't take it away 23% on every dollar will go into someones pocket. That is why maybe I will move to Thailand where the Canadian dollar is worth 1.80....

Speaking of Cordless phones, try this web site out www.extremerange.com

How about 100 miles talking range lol its not FCC approved so don't look out
bgi brother will be knocking at your door.

Personally I've never found the airband to be as good on the '895 as it is on a
PRO-2045.

If the 898 can equal the '2045 I'd be real happy.

Its something to do with the general welfare commision, you know all those people on welfare well this is the governments way of collecting back all that money lost on druggies, welfare bums, all the drunks, and the lastest issue is they all seem to have a new pack of smokes in there hands, do the numbers, if you smoke a pack a day, time 7 times 365, thats a shit pile of money going out the door, also if you are on welfare they will be asking if you smoke if you are they will be taking 75.00 out of every check. So maybe I can see this GWC for that reason alone, BUT WHY THE FUCK DO WE HAVE TO PUT UP WITH THE WELFARE BUMS SHIT!!!
Tax the shit of them not us!~!!

Too cheap to include shipping on a $400.00 item? Shipping is only 5% of the asking bid price.

Be a nice person and include shipping.

It is used to recover unfiltered audio from the receiver to be used to decode signals such as trunked radio control data or for PL and DPL decoding. Since most radios do not come with this audio brought to a jack, one must find the point inside the radio from where to tap it and bring it out so it can be accessed.

And in conjunction with survey-grade GPS receivers, using CORS[1] data for post-processing, it makes for measurements that tend to have position accuracies within 2 cm.

CORS is worth a Google search all on its own, even if you don't have a survey-grade GPS receiver, just to see what can be done with one.

[1] Continuously-Operating Reference Station: survey-grade GPS station at a _very_ precisely surveyed location, collecting DGPS-corrected apparent-position data, which is periodically transmitted to the USGS for publication on their CORS website. My employer operates a CORS station, and I helped set up the data-transfer stuff.

<ambrose22001@yahoo.com> writes

>Is the $100.00 cable the vendors sell the one needed to connect 8200MkIII to
>a computer?.

The AOR cable for the AR8200 is the "8200PC". This is interface housed
in a DB-9 serial connector. It was initially called the "CC8200" and
distributed with a CD of the AOR software.

>Why so costly?.Can you make one yourself?

There are several "third" party interfaces that have been produced by
people such as ourselves (although neither our JAV-232 or RS-8200 are
actually available at the moment) and others.

There are also quite a few designs on the web based around MAX232/233 or
similar IC's for those that might want to make their own. The MAX233
needs no capacitors so could be the better option.

Sample IC's can/could be had for such projects from the Maxim web site.

http://www.maxim-ic.com/quick_view2.cfm/qv_pk/1798

To connect your interface to the radio you would need the AOR "open
ended" cable. In the UK it is sold as the OS-8200 whilst AOR USA appear
to call it the IF8200. The connections available at the end of this
cable are detailed in the AR8200 manual P117 although you need to note
that some connections we re-assigned in later AR8200Mk2 and Mk3 models.

There is some trunked stuff in the metro area, not a lot yet though. Little digital yet, mostly in Hennepin County and a few control channels north of the metro area. I use a Pro-95 and pick up tons of traffic on the regular, non-trunked, non-digital channels.

Frustrating :-(

It could have been that you were not pushing the interface jack "far
enough" into the socket on the side of the radio. One or two people seem
to have stopped sort of pushing the jack so it actually "clocks" into
place.

It could of course been a faulty remote socket on the radio but tat
would be unusual based on my experience.

CBs for Soldiers

We're scratching our heads over the wisdom of Carole Rorrer's campaign. When her son called from the desert of Iraq last month and said his National Guard unit needed CB radios to stay connected while traveling in supply convoys, she quickly rounded up a pair of radios she no longer used and sent them overseas. Now she's asking the Beaufort, SC, community to search their garages, attics and basements for unused CB radios.

Rorrer said she spoke with her son, a lieutenant, and a captain from his unit on a conference call, and that she's sure her son went through the proper chain of command.

The military is normally very specific on what type of equipment can be used; Frequencies must be coordinated with local usage, and most of the radios used by soldiers in combat are secure so the enemy can't intercept messages.

"I'm not sure whether the Army will let civilian type radios in the country," said Bobby Kreps, commander of the local AMVETS chapter. MT remembers when military units have gotten into hot water in the past by using Family Service Radios for squadron communications.

So far Rorrer has sent eight radios.

I wonder if she has any idea at all the danger she is putting her son and
other soldiers in by doing this.

The proper chain of command? Right. No commander worth a crap would allow
their soldiers to use non-military radios to communicate any time.

What are the nifty things one might do with one's new frequency counter?

Apparently the idea is to mill around the Burger King drive up window,
lock on to their frequency, then go back to the van for hours of
clandestine eavesdropping with the scanner?

I agree it's a really nice thought, but wrong item to send over. Hopefully
someone will stop these guys from actually using them.

"resistance is futile"?

But maybe you have an idea there. Maybe you're on to something.

Since the U.S. military isn't changing things in Iraq too much, maybe it's time to send in the Borg.

It's amazing how the United States can send someone to the moon, and do it about a half dozen times, revolutionise
the computing world and yet can't find a stupid looking millionaire in the mountains.

Jumping in here with only knowing half the subject already discussed. NDB (Non-Directionsl Radio Beacons) as I know them are an aviation navigational aid. They are not used to the best of my knowledge as long range navaids but are used for instrument approaches into airports or as a component of other types of instrument approaches. I would reearch if what you propose could present a risk to the flying public.

Man, if that's all there is to life, they must be really hurting. There are many things you can use a FC for, but some may be fleeting moments. Like a passing CBer, police cruiser, fire engine, ambulance, plane overhead, etc. Assuming of course, they are talking! FCs are better used for transmitter testing.

Nope, 911, at least in the US. Yes, it's a federal law.

If you have a working phone, and you dial 911, and that phone can hit
the tower, the call must go through, whether your phone has been
activated or not. An activated phone is one for which you are paying
your phone bill.

I get all my cell phones from the trash or from yard sales. On two
occasions, I have used them to dial 911. On both occasions, the call
was made successfully from phones that had not been activated.

You can always test to see whether a phone works by dialing (OK,
entering) a string of nonsense digits. On a working phone that is not
activated, if you are in range of a tower, you'll get a recorded
message that politely tells you that your call cannot be placed;
please call your service provider for more help. In other words, pay
your bill.

I Googled for "911 cellphone not activated":

http://www.google.com/search?hl=en&ie=UTF-8&q=911+cellphone+not+activated&btnG=Google+Search

There are documented cases of the forces there using unapproved FRS and GMRS radios. There is "concern" and saying it was bad, but they don't seem to have cracked down...

> Nope, 911, at least in the US. Yes, it's a federal law.

You still mean "112".

911 is the standard emergency number (in the US), however if your GSM phone
is out of range on your selected network you will not be connected. Dialling
"112" - on any GSM mobile, anywhere in the world - will connect you to the
nearest GSM tower and place your emergency call to your countries emergency
number, independent of whether you have reception on your network or if you
have a SIM installed.

> If you have a working phone, and you dial 911, and that phone can hit
> the tower, the call must go through, whether your phone has been
> activated or not. An activated phone is one for which you are paying
> your phone bill.

But 911 (in the US) will only work if you are in range of your selected
network (a SIM card must be installed in a GSM phone - 'activated' or
otherwise). If your phone is out of range of your provider (or you have no
SIM card) then you will not be connected. Dialling "112" will connect you
regardless.

But this thread was about old AMPS phones dialling the emergency number. If
they are not still connected to a network then you cannot make emergency
calls.

Not sure what your point is here. If a cell phone cannot connect to ANY network (as defined as a given company/group of related companies/corporation providing service on AMPS) then without a RF link, yes, you're not going to be able to place ANY form of call. Emergency calls are a subset of that.

However, if your disconnected/unactivated phone can make an RF link to _any_ AMPS provider (not just the one you are/were signed up for) then the 911 call should go through.

Not true. Some GSM network providers block the dialing of 112 or/and ask
users to use a landline or payphone to dial the specific emergency numbers.

> But 911 (in the US) will only work if you are in range of your selected
> network (a SIM card must be installed in a GSM phone - 'activated' or

Most GSM phones sold in US can bypass any lock (SIM, phone, keypad etc)
with/without active service when dialing 911. I am not sure about
IMEI-blacklisted phones.

>
> But this thread was about old AMPS phones dialling the emergency number.
If

If a landline phone is unplugged, you cannot make any call on it neither.

Greetings,

A buddy showed me his "scanner" last night. It was a Realistic Pro-4
with 4 crystal controlled channels.

I did a bit of quick non-destructive investigation. Two of the freqs are
still good ones, but the other two weren't active in this area.

Poking around, the best I can come up with is that I suspect that the
Pro-4 has a 10.7MHz IF.

The crystals are marked with their frequency as follows:
"154.325 P77-AH"

I've done the priliminary google thing on scanner crystals, but would
feel a lot better if one of you could point me to a specific source for
these crystals.

-Donald
(And yes, I have recommended he get a new scanner...)

Yes, during my time in Kosovo troops were using those, but only on post. I never saw them being used during mounted or unmounted patrols.

Don't the FRS and GMRS radios at least offer some type of encryption? It might not be world-class military style, but it's better than a CB where you might as well just use a bullhorn to yell between vehicles for all the secrecy you get.

:-)

A homodyne, synchrodyne or super-regen would radiate and give a false
position. Other types of receiver would basically be OK, but I would
ensure that the LO wasn't in-band even so, if the receiver used a tewb
LO.

They may disallow encryption "here" in the US, but in IRAQ and Afghanistan
where there is virtually no law at the moment, it may not matter!

Lou

Non-precision approaches, perhaps, when they are close to a field. They are
little used today. They were intended for medium range navigation, replaced
by the VOR. I get a few on my 706 and 40M inverted Vee.

Could, with bad design, I suppose.

I doubt that your couple of milliwatts would outshine the true VOR signal,
especially given the sort of antenna you're likely to be running.
There are already all sorts of accidental emitters in this band, and they
aren't causing any trouble.

Nup, GSM only - not AMPS. If your AMPS phone has been disconnected from the network you will NOT be able to make calls, including emergency numbers - whether you are in range or not. Those old bag phones are surely not still connected and therefore will not be suitable for using as emergency phones.

That seems like a great idea - blocking the emergency number. Only in the US
I guess :)

I don't disagree with that. However if you are not in range of your nearest
network tower your call will not be connected by dialling 911. Dialling
"112" will allow connection to any network.

This store will be coming out with new software for the R5 sometime this
month, I have their software for programming my bc250d digital scanner and
it's the best software out there.

Is this your experience or your guess? My experience and, as others say, regulations require 911 calls to go through whether the phone is activated or not. If there is no AMPS service...there ain't no call. However if there is service and the phone can find it (some lock to A or B and older ones won't cross over even for 911) the call should, by regulation and by my experience, go through.

I have a couple of old phones that haven't been activated in 7+ years. They both still "work" and can dial 911 when necessary.

Another way to test a phone without dialing 911 and causing problem with the authorities, is to dial 611. Many (if not all) cell phone (I'm talking AMPS here...don't know about digital) customer service bureaus can be reached by dialling 611. You used to have to talk to someone and then say "nevermind". However, nowadays, so many of these are automated, you'll get a DTMF menu or recording asking for a credit card. At least you know the phone works. Switch from A to B and try 611 on both networks.

This is not a correct statement. I've experienced it myself. 911 (by regulation and my experience) works on unactivated phones. 611 also works. I've dialled other numbers (area code + phone number) and been given an opportunity to enter a credit card. I'm not sure where you get your information, but it is not accurate. It may be your guess or your experience, but it is not universal to AMPS.

I received my new Uniden BC898-T scanner today, from Universal Radio. It is very similar to the BC895-XLT, as many have said. However, there are definitely enough changes, and/or improvements, to serious consider this scanner. Although it is lacking the ability to receive digital, other than that, I'd say it's one of the best!

Some scanners use Regency-type crystals, which depend on an IF of 10.7 MHz. Other scaners use Bearcat-type crystals, which depend on an IF of 10.8 MHz.

These guys can provide some insight.

When I bought one last year, the shop I got it in said that
could do it but didn't have the current software. Nearer home, the
duds behind the counter had no idea what I was asking about. I finally
went to the first place, in a different county and all they could do
was load in their own frequency sets, which they did at no charge and
no extra purchase.

Check the ads -- they may specify it as free.

G'day people,

just spreading the word about my online scanner which has been up for a few days now, located at http://www.scannsw.aesvn.org/southernscan.asx

It shows the display of the scanner so you know what you are listening to and is located about 400km south west of Sydney in country New South Wales

Any questions or problems can be emailed to southernscan@iinet.net.au

Enjoy!

Mike

If you tells us the letters, we will tell you where it is. Guessing based on the address for you amateur radio callsign, if it uses the morse code ID of "IBM" (.. -... --), it is
KIMBALL NEBRASKA on 317.51 KHz (Actually the carrier freq is on 317 kHz with the 1020 Hz tone only on the upper sideband so it appears at 318.020 kHz. The 317.51 is the average of 317 and 317+1.020). If the morse ID is not "IBM". what is it?

True, but the subject line refers to NDB's not VOR's. Good luck even TRYING
to interfere with an NDB. Even if you do manage 50 or 100 watts and a
decent antenna, nobody's listening. 'ceptin some hams and perhaps a random
pilot who wonders if his ADF is still working. They can always use an AM
station (ADF's tune the AM band) if they can't get an NDB.

==
The Realistic PRO 95 is a 1000 channel dual trunking scanner. It covers
Motorola I IIi and II systems as well as the G.E. Ericsson type systems.
This is a high performance extended coverage scanner that can scan both
trunked and conventional systems at the same time. It has 1000 channels
arranged in 10 banks of 100 and 1000 Talk Group ID memories that can display
your text entries for easier identification of frequencies. The triple
conversion circuit and switchable 20 dB attenuator cut image-type
interference. The display provides four lines of 12 characters and has a
push-button backlight with a programmable on time. You can search preset
non-trunked police/fire, marine, CB, ham and VHF air frequencies for
activity. The extended coverage includes the CB (AM) band, 220 MHz and
1250 MHz ham bands A weather alert sounds an alarm and the display
indicates
the level of the alert. A PC interface permits computer control and easy
memory cloning with another PRO-95 scanner.

Frequency coverage is from 25 - 54 MHz, 108 - 174 MHz, 216 - 225 MHz,
406 - 512 MHz, 806 - 960 MHz (excluding cellular) and 1240 - 1300 MHz.
The digital weather alert indicates watch, warning, statement or test
statements along with 7 preprogrammed NOAA Weather Stations. The Weather
receiver is a SAME receiver. Other features include power save, key tone
on/off, alpha-numeric display for ID tagging and a triple conversion super
hetrodyine receiver.

Still plenty of pilots who use NDBs to do instrument landing approaches. Especially at rural airports. GPS is all the rage now, but many rural airports don't have a published GPS approach yet. And, an FAA "approved" GPS is very expensive (roughly $4k installed and certified), so many aircraft owners don't have one yet.

Not at this time. Although I have owned several BC895-XLT's in the past.
So far, I've just monitored local VHF/UHF public safety. This weekend, I'll
check out the amateur radio bands, commercial, and military aircraft, etc.
I live within listening distance of Selfridge Air Base, in SE Michigan, so
it will be a good test.

Hi, please check out this links page

http://www.tetrascanner.com/links-to-digital-online-scanners.html

where you will find :

Digital online scanners (listening to digital networks)
Visual online scanners (showing info on what you receive)
Remote controlled receivers (dial your frequency)
Online paging receivers (see real-time messages)
Online ship position tracking monitors (real-time map)
Online aircraft position tracking monitors (near real-time)
Online cellphone / gsm position locators (real-time map)

There is lots of (radio-related) action there

Always under construction ofcourse

I still have to add:

APRS (see the gps-position of 1000's radioamateurs)
More remote controlled receivers (Javaradio/Dx ...etc)
More Gsm / Cellphone postion trackers (12)
More online digital scanners (Bearcat-Radioshack....very hard to find !)

Still looking for non-commercial (near) real-time
ACARS screens...very hard to find too !...and not allowed everywhere i guess
?...i mean a online one not software
...and put out there by a amateur ...not a company with
a direct link to the ATC.

If you have any good links that would fit in there ...
anything a little more then a analog-listen-only-scanner
please let me know.

Thanks !

You guys missed the followup article. Ya see, in addition to the CB's, they're also sending over a dozen CBers from the Bayoo in Suburbans with two big coil-type antennas and 1000 watt amps. They're gonna babble unintelligibly on the CB all day, causing the Iraqi insurgents that are monitoring to go nuts and just give up!

"Vic" wrote
> Should us 780 owners begin trading in our radios for the 898?

Hi Vic, when the 780 had been on the market a little over a year, I had the occassion to borrow one for a month and ran several comparisons side by side with a workhorse 895. I found the sensitivity and selectivity of the two to be roughly equal. But in scanning speed, the 895 had a significant advantage due to it's (30) memory-channel banks v. the 780's (50) memory-channel banks. This is assuming that both scan at the advertised 100 ch/sec when frequencies are entered in numerical order, ascending. Note that the use of Uniden's "intelli-scan" or what ever they call it that claims auto-sorting the order for scanning does have an effect of scan-speed, regardless of the claims made. But for practical purposes only, and that meant to me: catching the most traffic of a given set of frequencies, the 895 was better at keeping up with the fast-changing frequencies of air combat manuever training. It did this simply because it was working 20 channels/bank less than it's equally fast successor, the 780. Even though the new 898 has a meager 200 additional channels than the 895, I doubt that there will ever be a "faster" scanner than the old 895.

There is no such thing. If you want a good handheld scanner that
covers all the right frequencies, then you'd better plan on spending
more than $150.

However, if you just want to be casually amused like a charter member
of the common herd, then consider the preceeding Radio-Hack Wal*Fart
recommendations.

GMRS and FRS HTs which do some kinda inversion ('scramble') are
available from Kenwood, Garmin, Panasonic and others. Said to be
easily cracked, but requires gear which might take several days to
procure and configure.

http://www.kenwood.net/indexKenwood.cfm?do=ProductDetails&ProdID=78&Group=7
http://www.kenwood.net/indexKenwood.cfm?do=ProductDetails&ProdID=69&Group=7
http://www.garmin.com/products/rino120/
http://www.georeviews.com/Electronics/Brands/Panasonic/Two-Way_Radios___Accessories/index.
php

If the grunts assume they're being listened to when they use this
gear, no problem. Might even be useful for maskirova once they know
the Stills have the same model or a descrambler rig on hand.

However, Dunnigan has noted the standard issue comm gear's NFG in
urban environments, so something, even monitored, is better than nada
sometimes.

Oops! I thought at first, you were referring to the newer digital model,
but you were talking about the 780. No real reason to change.

PRO-95 on sale at the Shack for $179.99 is an excellent scanner (of you don't NEED digital). Great sensitivity, trunk tracking, ALPHA labels. What more do you need?

Personally I can't see a Trunk Tracker without ALPHA.
Too hard to figure out what you are listening to.
It does sound like a great scanner if it had the ALPHA tags.

And let's not forget:

"Well, I haven't been briefed yet," "They have offered to brief me; I just haven't had time." - John Kerry on being offered a terror briefing

Will he have time to keep this country safe if he becomes president or will he be too busy with things like going to listen to Whoopie Goldberg bash George Bush like he did on that particular occassion?

You say these phones have not been 'activated' for 7 or so years, yet you
get the automated credit card
menu? Your phones is still connected to the network my friend - just on a
'pay per use' basis as with many old AMPS phones.

When an AMPS phone is completely removed from a network you will NOT be able
to make any outgoing calls - it doesn't matter if you are dialling 911, 611
or anything, you will NOT be connected.

No need. Find an old AMPS phone that is disconnected from the network and
try making any type of call.

As I said above, these phones asking for credit card details have not been
removed from the network. The are still connected on a 'pay per use' basis -
hence the request for credit card details.

An AMPS phone that has been removed from the network will NOT permit any
number to be dialled.

Well... sorta hard to prove one way or the other, cuz my AMPS phone that hasn't been "activated" for YEARS still gets a credit card message.

So, it's sorta a moot point. If I donated it to a charity so that they could make 911 calls, they could.

Patrick AFB, Avon Park, NASA-KSC Log - Wed. 4 Aug 2004

DOS 117: UH-1N #135117 (N12328), US State Dept, Patrick AFB.
9:33am: Inbound Patrick AFB.
[132.65]

MARLIN 11: A-10A Barksdale AFB 917W 47FS
9:46am: Arrives Avon Park Bombing Range from MacDill TDY base, strafes, bombs targets. Works with Havoc FAC.
[349.0, 292.2, 264.625]

NASA 919: T-38N #66-8385, NASA-Johnson Space Ctr, Houston.
9:53am: Lands Shuttle Landing Facility; later departs to Acadiana RAP, a common refueling spot for T-38s flying SLF-Ellington AFB.
[128.55, 132.65, 124.1]

MADFOX 04: P-3C, Jacksonville NAS VP-5 "Mad Foxes"
9:53am: Area transition.

MAKO 01: F-16C flight of 2, Homestead JARB AFRC 482FW 93FS
10:04am: Works at Avon Park Bombing Range with FAC "Havoc."
[292.2, 264.625, 138.125]

GULFSTREAM 1NA: G-1159A Gulfstream III #3097, NASA Hqtrs
10:09am: Lands NASA Shuttle Landing Facility. AKA NASA 1.
[132.65, 128.55]

N696US: NA-265 Sabreliner #465-18, United Space Alliance (NASA Space Shuttle Contractor)
10:05am: Lands Space Coast RAP
[132.65, 118.9]

RAZOR 33: E-8C "JSTARS", Robins AFB GA-ANG 116ACW 330CTS
10:09am: In area.
12:35pm: Gets wx from Patrick Metro.
[344.6]

STARGATE: E-8C "JSTARS" , Robins AFB GA-ANG 116ACW 330CTS [Mission-crew c/s for Razor 33]
10:13am: Working with Homestead F-16s (SHARKs) at Avon Park Bombing Range.
[285.725, 381.0]

NASA 959: T-38N #70-1550, Johnson Space Ctr, Houston TX
10:20am: Local ops.
[132.65, 118.9]

AIR TRANSPORT 300: DC-8, Little Rock AR (USAF Contractor)
10:25am: Arrives Patrick.

1:05pm: Departs as Air Transport 400.
[132.65, 133.75, 135.7]

BRONCO 01: OV-10D, US State Dept Intl Narcotics Mission, Patrick AFB.
10:23am: Local ops.
[133.75]

SHARK 21: F-16C, Flight of 3, Homestead JARB AFRC 482FW 93FS
10:24am: Inbound Avon Park Bombing Range to work with JSTARS "Stargate"; 6 Mk-82s each; works in Marion MOA. SHARK 23 remains longer to work with FAC Havoc.
[307.1, 292.2, 285.725, 381.0, 139.8]

ROCK CONTROL
10:35am: Radio checks with Cape Control
[118.625]

JR 329: C-20D, Andrews NAF VR-48 "Capitol Skyliners"
11:25am: Lands Cape Canaveral AFS
[118.625]

STITCH 01: A-10A Flight, Barksdale 47FS
11:25am: Works at Avon Park Bombing Range. One acft in flight has unsafe light for landing gear during RTB, rqsts Avon Ops ctct Buccaneer Ops at MacDill.
[292.2, 349.0, 138.05 air-air]

PITMAN 21: F-16CJ, Shaw AFB 20FW
1:04pm: CAP
[265.4]

N21NG: LJ-35A #343, Northrop Grumman JSTARS Facility, Melbourne FL
1:15pm: Lands Melbourne IAP.
[132.65, 118.2]

MARLIN Flight: A-10A Barksdale 917W 47FS
1:23pm: Working Avon Park Bombing Range.
[349.0, 292.2, 264.625]

BRONCO 13: OV-10D, US State Dept Intl Narcotics Mission, Patrick AFB.
1:35pm: Lands Patrick.
[132.65, 133.75]

GOLIATH: E-3C AWACS, Tinker AFB 552ACW 960ACS
2:09pm: Rqsts clearance for SLAM 31 F-15 flight direct Beaufort.
2:44pm: Front-end crew re wx between Tampa and Tinker.
[284.5, 344.6]

STITCH: A-10A Flight, Barksdale 47FS
2:10pm: At Avon Park Bombing Range.
[292.2, 138.425, 138.875]

Unid: Probably Shaw F-16
2:46pm: Working with FAC Havoc vs tgts at Avon Park.
[141.675]

MAKO 11: F-16C flight of 2, Homestead JARB AFRC 482FW 93FS
2:50pm: Works with FAC "Stryker" at Avon Park Bombing Range.
[285.725, 292.2, 307.1]

CANFORCE 4339: C-130, Prob Winnipeg.
3:06pm: Comms with MacDill Ops.
[372.2]

SHARK 21: F-16C Single ship, Homestead JARB AFRC 482FW 93FS
3:10pm: Works with FAC "Stryker" at Avon Park Bombing Range.
[285.725, 292.2]

BOLT 31: KC-135R, MacDill AFB 6AMW
11:19pm: Inbound MacDill; air-air with BOLT 32.
[311.0]

BOLT 32: KC-135R, MacDill AFB 6AMW
11:19pm: Inbound MacDill; air-air with BOLT 31.
[311.0]

JOLLY 21: HH-60G Pave Hawk Helo, Moody AFB 41RQS
11:23pm: Local ops, lands Patrick.
[138.475, 383.0]

Throughout the day and night, comms were heard on Tyndall freqs 314.05, 357.5, 261.2.

FRS and GMRS radios are used by many of the guys there, and not just on the bases, but also out on convoys.
Some of these radios offer a basic voice inversion which in conjunction with the privacy tones (CTCSS) are claimed by manufacturers to provide secure modes of communications. Absolute drivel as most of us here know.
OK, a lot of the info passed is useful for only a short period of time, but the use of these systems does give the enemy an advantage.
As to having cleared this through the system - what a crock of shit - it appears to have been cleared via his boss who obviously has no idea about communication issues! The stupidity of some just amazes me.
FRS is a relatively short range system due to the use of low power and fixed low efficiency antennas - I would be very concerned about using CB's with more efficient antennas and higher power outputs. Hope the idiot has his arse kicked for not PROPERLY going through the system and that his stupidity does not result in the unnecessary death of more soldiers.

Pro92b & Pro2067 for sale

Pro92B $125.00
Pro2067 $150.00
Both are in excellent condition.
Pro2067 has a discriminator tap.
Pro92B has a minor ouch in the display, it DOES NOT affect the view.
I ship/pay UPS lower 48.

Hello!

I have been picking up a lot of I-CALL active id's on the MSP trunked system. It seems like each troop has their own I-CALL ID at this time. I have talked to a lot of people, and they all tell me I-CALL aren't used anymore. Well I can confirm they are working, and working a lot each day. If your interested in talking more about the I-CALL ID's on the MSP system contact me via e-mail. Or goto my messageboard and post your thoughts there.

Come talk to me about this here:
http://www.scanthis.com/Forum/index.php?showtopic=340

I guess the operative phrase here is your "removed from the network".
I don't know what you mean, but since the discussion here was dialling
what to do with old phones and the answer was donate them to a shelter
for 911 purposes, I guess your phrase doesn't matter. Old,
inactivated phones are being used all over the country for 911
purposes. Yes, I get a credit card message because my phone is
unactivated and unknown to the local network. Maybe your phrase is
referring to blacklisted ESN's or something like that. Sorry, I've
never had a phone blacklisted, so I couldn't comment.

Maybe you'd care to elaborate on what you mean by "removed from the
network". I'd be interested to know what, specifically, you were
referring to.

Sorry. I don't understand what you mean by "removed from the
network". I stand by my statements.

My phones are old, unactivated (yes, unactivated) and able to make
calls.

I think we are talking about apples and oranges. I'm talking about an
unactivated phone (one which has not been registered with a cellular
provider for service) and you are talking about one that has been
"removed from the network". The only way I know to remove a phone
from a network, is turn off the base station or take to the phone to
an area without AMPS service. In either case, yes, I could not make
any kind of call.

Please explain your phrase "removed from the network".

Can anyone point me to a site where we can find software to decode ZVEIA/CCIR 5/6 tone Selcall decoding?

preferrably we are looking to do this with a PC soundcard. Ideally a Linux application with sourcecode would be best. We think the application has non-standard tones and timing.

Thanks

Hello:

What is the meaning of "LANT", as in the Coast Guard LANT frequency listings
?

1392. Coast Guard Band Usage Question

Newsgroup: rec.radio.scanner
Date: 2004-08-08 16:36:47 UTC
From: Robert11 <rgsxrose@comcast.net>
Message-ID: <KrudnRPTgqLpy4vcRVn-sg@comcast.com>
Source record: 19057

Are all the frequencies above 30 MHz that the coast guard uses, (with the exception of the aero bands,) FM ?
If so, NFM, or just FM ?

Any Coast Guard USB above 30 MHz ?

For Coast Guard aero usage, what are the upper and lower aero band AM freq. limits ?

Thanks,
Bob

Hi,

Thanks for reply.

Are these "LANT" freq's air to ground, as well as the normal nautical stuff,
or... ?

thanks again,
Bob

Hello to all,

I thought it would only take a simple and fast search, but I have been unable to find frequencies for Wal-Mart.

Can anyone direct me to a site that might have info?

Any help appreciated....Howard

Well if thats the case, thats MURS channel 4, you can hop on and tell them
what you think!
I will walk into my local WAL*MART with my trusty Optoelectronics "Scout" or
"Explorer" and find where they are at.
Update to follow....

Just got back from a cruise to Alaska. Took my Sony 7600GR with my. Sitting on the top deck at night I could get 6-10 beacons, US and Canada, using just the internal antenna. I guess bush pilots still use the beacons.

HF was also really good. At the WWV and WWVH signals came in easily.

Steve.

I know how you feel ... I'm still busy trying to figure
out the basic functions of mine, but the jap manual
isn't much help when it only makes round eyes dizzy.

I wish there was some sort of after-market publication
on the 8200 written by Americans FOR Americans in
coherent English prose. My ancient FAIR MATE HP-2000
had them, and that's how I learned to use it.

However, as frustrating as the learning process can
often be for casual enthusiasts, I'm glad to be the
owner of the best chink gear available.

I invite correspondence from other MK2/MK3 users who
might be/have been suffering the same dilemma. After
all, the AR8200 owner knows these aren't Uniden toys!

Good Morning And thanks for the mail.

You are right, It is the EDACS System and I am sure sites are to far a part to
work right. In a lot of places the control channel is week to none.
But some times the control channel is strong and should work. I have had four trunk trucker radios now and even with a good strong control channel reception it will not track a conversation. I will hear someone and will not hear the rest of it.
Now I have the Uniden 250D and the 785D. I programmed then using Unidens web site and the E scanner software. And they are doing the same thing as the older scanners. They are locking on the control channel so I would think they should be tracking but they are not.

I work for Los Angeles County DPW Road Dept. for 23 years. Would you believe they went to this system about ten years ago now. The old radio system was VHF 151.040. When they went to the new one we took all the trucks
to Palmdale, They took out the old radios and put in the new. They tested and worked OK in palmdale. But guess what? You get out of town into work areas they would not work. So the first time we had a big rain and snow storm we could not use the radios. And have people stranded way out in the middle of no where and can't get help. And in places where the old radios would have worked. This new GE. system would not work in places where the old VHS radios worked with no problem. So here we go back with all the trucks that were used for storms, Trucks with rock and snow blades and sanders for ice. to have the old radios put back in them. And are being used today because the new system still does not work any better then when it was put into service about ten years a go. You could bet if this system was used for police
or fire it would have worked before it was but into service.
And just think we had the privilege of paying six million $$ for it.

But if you can thing of anything I am doing wrong please let me know.

Where are you? I live in south Kern County (Antelope Valley) and
easily monitor the LA County trunked system on a Radio Shack PRO-95,
indoors with the stock 6 inch antenna. The only problem is Channel 15.
It sounds messed up. I don't know if it's the repeater or my scanner.
It could even be EMI from the big cell phone tower a block away.

These are the channels I have set up:

01 866.0875 (control channel)
02 866.5875
03 866.9375
04 867.225
05 867.725
06 866.25
07 866.775
08 867.775
09 868.0875
10 868.775
11 868.725
12 866.3
13 866.275
14 866.8
15 867.275 (bad)
16 867.8
17 868.275
18 868.8
19 867.25
20 868.25

I have these in Bank 3 of my scanner, so the above frequencies are
stored in scanner channel 301, 302, etc.

This site shows many of the talkgroups in the system. Not all, though.

http://home.att.net/~wwhitby/ca.htm

Judging from what I've heard, repeater sites are still being added to
the LA County trunked system. During a recent wildfire, I overheard
some comm techs talking about activating a new site. One guy said the

fire was forcing them to advance their schedule six months.

Hiya. I had a MKII for about 6 or so months.
Jesus christ, I can't understand why it was so difficult to use!
And the battery life was real crap too. I absolutely loved it as a scanner,
but wished to god I didn't sell my Yupi 7100 for it.
To make things even worse, they wanted £75 for the PC lead!

I know there are allot of people who love the 8200's, so I apologise if I offend you,
(which I have before!) just personal opinion.

But it wasn't as sensitive as my Yupi either though.
But twice as dear.
Well, I sold the MKII and got my beloved Yupi 7100 back.
FOR GOOD!!!

Andy

Press SRCH, push F, push 9, push the control pad down three times until you see "DELETE MEM BANK", select the memory bank you want to delete by pressing left or right on the control pad button. Once the memory bank you want to delete is displayed, push PASS. As far as I know you must do one bank at a time. I don't know how to delete them all at once.

Hope this helps.

Yep;
When I saw the locations of the sites and did the simple math it was obvious to me the engineers of that system did not have a clue as to intersymbol interference on a simulcast system. They had no business putting that system in. And because the County used a system integrator as opposed to hiring GE-Ericsson up front, GE-Ericsson had no contractual responsibility. They got their money and tough luck to everyone else.
The County was anxious to get the system integrator off the job so that GE/Ericsson (now M/A-COM) would fix the system. County accepted a couple million dollar settlement from the integrator, they left town and guess what? Now Ericsson wanted to replace a big portion control subsystem of the just installed system at megabucks without providing any solution to the simulcast coverage issues.

All that being said, the system should work ok in many areas, it did 8 years ago anyway! So I wonder about your scanner programming. You might try programming an EDACS system of another smaller locality into the scanner to make sure it and your methods are working. Sometimes fleet coding can get tricky. I do wonder if over the last few years the County sprung for the controller upgrade that does scramble the control channel data (to prevent eavesdropping) but I doubt it.

Oh yes, as a conversation hops from channel to channel the PRO-95 follows without difficulty. Well, once in a while it misses. Nothing serious. There are a lot of things I don't like about the PRO-95, but I'm satisfied with its ability to track a trunked system, Motorola or EDACS.

You should be able to get solid copy in Palmdale, since I'm north of the air base and get enough signal indoors with a little 6" antenna.

Try to do your testing during the day. At night the LA County trunked system is almost dead. There's a little law enforcement traffic and not much else. One Friday night I heard Vice running a prostitution sting on talkgroup 1686.

I recently bought a Hustler Discone Monitor Antenna (Part # HUS-DCX).
I am thinking of placing it inside my attic (using 75' of 9913 coax)
for easy installation and protection from the elements. I'm in a
Houston, TX suburb where signals come in good with the stock antenna
on my scanner. Can anyone tell me if this antenna setup will be
sufficient or have any advice for placement and easy installation
without going on top of my roof? Thanks

I recently bought a Hustler Discone Monitor Antenna (Part # HUS-DCX).
I am thinking of placing it inside my attic (using 75' of 9913 coax)
for easy installation and protection from the elements. I'm in a
Houston, TX suburb where signals come in good with the stock antenna
on my scanner. Can anyone tell me if this antenna setup will be
sufficient or have any advice for placement and easy installation
without going on top of my roof? Thanks

Bob:

I don't know if this will help. This is what I got for the
Houston/Galveston , TX area. It may be similar in your area. Maybe try
limit searches in 157 mHz range. Let me know if you find anything.
Good luck.

Seeing as you cut out there rest of the ad where its says its from RS, and if you had noticed I put another post in stating RS had them on sale for 179.95 now, maybe it would be easier too not say anything and just read on.

Here is your radio for 179.95, also if there is anyone out there that knows where I can buy this thing on line or otherwise, as I live in Canada for the moment, and the Arsholes won't ship to Canada.

High-performance, extended coverage scanner has the ability to
scan both trunked and conventional channels at the same time. It has 1000

memories-arranged in 10 banks of 100-and 1000 ID memories that can display your text entries for easier identification of frequencies. The triple conversion circuit and switchable 20dB attenuator cut image-type interference. The display provides four lines of 12 characters and has a push-button backlight with programmable on time. You can search preset non-trunked police/ fire, marine, CB, Ham and VHF-air frequencies for activity. Extended coverage includes CB (AM), 220MHz and 1260MHz Ham bands. Weather alert sounds an alarm and the display indicates level of alert. PC interface permits computer control (software not included) and easy memory cloning with another PRO-95 scanner (cable Cat. No. 42-2420 1/8" mono to 1/8" mono plug, extra).

PRODUCT FEATURES
. Power save
. Key tone on/off
. Alpha-numeric display for ID tagging allows frequencies
to be easily identified by the name you assign to them
. Triple conversion Super heterodyne receiver virtually
eliminates image-type interference
. Frequency Coverage: 25-54, 108-136.9875, 137-174,
216-225, 406-512, 806-960 (excluding cellular) and 1240-1300MHz
. Digital weather alert indicates watch, warning,
statement or test statement along with 7 preprogrammed NOAA WX stations
. Power: Requires 4 "AA" batteries or adapter: AC
#273-1767/C, DC #273-1810/C
. Jacks: Earphone, PC interface/cloning, antenna (BNC),
external power
. Includes: Detachable flexible antenna, belt clip, two
battery holders
. Size: (less antenna) 6-1/2&#65533;2-5/8&#65533;1-3/4"
. Includes: VHF Lo/Hi, UHF, VHF-Air, 800MHz,
Dual-Trunking, Extended Coverage

That's not the fault of the healthcare system. That's your fault. How come you don't have insurance? What choices did you make in your life that you don't have insurance? I'm talking about the socialized Canadian healthcare system where Canadians have to come to the U.S. for medical procedures because they are not available in Canada because the government decides who gets what. Why not spend some time in a Buffalo hospital and see where the patients are from.

A discone has no gain. Added to that, the loss factor of 75' of coax (I don't care if it is 9913), and you will end up with a very disappointing antenna system.

OH! el contrare mona me!

I know, rotten French ha ha..

even a rubber ducky has a gain. That is a gain over an "isotropic force". Some manufactures of antennae rate the gain as gain over a vertical dipole and some rate theirs over an isotropic force. The higher gain antennas are probably rated as xx gain over an isotropic force. Isotropic force is a imaginable antenna in free space and is used for just this reason. Realistically, there is no gain on a non directional antenna.

Well if he used that 75' to go straight up, he would have one outstanding antenna system. Wasting the 75' run to wend through the walls and attic, maybe not such a big deal but still an improvement over the whip!. The Scantenna would outperform a standard discone on most bands (still little or no gain - but less of an attenuator than the ol' discones ;-).

Recently signed legislation prohibits Medicare from
negotiating prices with the pharma companies. Canada is not so
prohibited. If that ain't the system, what is.

1457. Re: Antenna Placement

Newsgroup: rec.radio.scanner
Date: 2004-08-12 04:00:48 UTC

ARRL Antenna Book lists gain of a discone as 2 dBi.

I use a D-130J and 100' of 9913 (cuz I've been to lazy to trim it). I've worked the digitpeater on the ISS with it.

When I get my X-50 up in a couple of weeks, I'll be looking for a broadband, mast-mounted preamp for it, but that's just the engineer in me.

The system has met and exceeded my expectations.

My experience leads me to believe that the reality isn't quite as bad as Bill makes it out to be...

The ARRL handbook list the gain of a discone as 2 dbi. The i stands for isotropic force. Therefore the dbgain is 2 db over an imaginary force. The discone antenna is an omni directional antenna and therefore really doesn't have any gain. In order for a antenna to have a "true db gain" it has to be directional. It's more or less a gimmick. If you stuck a wet noodle in your antenna connector it would have a 2 dbi gain..

Message-ID: <lrCSc.690$191.191@newsread1.dllstx09.us.to.verio.net>
Source record: 18875

OK..... I've read the news group for months... I've seen much discussion on it.... BUT, though I read some of it, I never digested any of the info I read as I didn't think I'd be interested or need. Now I find myself interested....

IS there - software able to be downloaded to use to program the Pro 95? I have 2 of them here, that I'd like to get programmed. I'm looking at this as a time saver..... I do NOT plan to take my radios to RS for help. I'll do it manually before I go there. I do remember the horror stories I read. And, quite frankly, I know more of what is in use here than the folks working there..... I don't know that there are 1000 frequencies here, which may be the biggest dilemma (filling this thing up), but there are quite a few and I've got the majority listed on paper..... Again, looking to do this as a "time saver".

So, assuming my news groups behave themselves and work as they have been.... knock on wood! - I'll read any replies and see what you folks can offer up - again!

I DO appreciate any help which may be forth coming..... I apologize for having to beat this dead horse yet again.

Lou

Yes. I use Win95 available at the following link:

http://www.starrsoft.com/freeware/win95/default.asp

It does save a LOT of time.

Make sure you have the right cable. I got mine from
http://www.pro95.com/

More cable information here:
http://www.starrsoft.com/freeware/Win95/Cables/cables.html

Good luck. I consider my Pro-95 to be the single best scanner purchase
I've ever made.

I beg to differ.

The i stands for isotropic, which means it radiates perfectly in all directions. Not "an isotropic force."

The discone is omnidirection in the azimuth. It is not omnidirectional in elevation. It obtains its gain by having better lobes up to about 60 degrees (depends on the design and the frequency within the range) of elevation.

The difference is important when you're working satellites.

Paying attention to the elevation lobes is also important when you are trying to work DX on HF.

A 1/2 wave dipole (which exhibits directionality broadside with reduced coverage off the ends) has a gain of 2.15 dBi. People DO pay attention to the orientation of their dipoles. So 2 some odd dBi is a bit better than a "wet noodle."

Would a yagi work better? It depends. Yes it has better gain & front-to-back ratio AT A GIVEN FREQUENCY. But no yagi is going to give the frequency coverage that a discone (of equivalent design) has.

The DEC said that we were going to be using MURS to support the local CERT teams. No problem with the discone. People with yagis, j-poles and 1/4 wave whips are all going to need to mount another antenna.

As I said. It depends on what you think is "better."

Why are you depending on the government (Medicare)? Where is *your*
insurance? I just go down to the corner Walgreens and pay the $10 of $20
co-pay. Of course I planned my life a little better than those who depend
on government, and I am not interested in subsidizing those who are too lazy
or too stupid to take care of their own affairs.

I'd have to agree with Donald! The PRO-95 is a great addition; I've graduated from a PRO-43 that I bought in 1994. I live in the burn area of Southern California and used the PRO-43 exclusively, so the "95" was a quantum leap for me.

I pray that I'll never need to use the PRO-95 under any remotely similar conditions.

Just one more thing to add. Yahoo has a great PRO-95 group:

Source record: 18890

Well, after spending a week with the new Uniden BC898-T, I would say, if you already have a BC895-XLT, then don't worry about upgrading. However, if you're in the market, then definitely buy the BC898-T, over the older BC895-XLT.

The newer BC898 has a few more features, and capabilities, at about the same price. However, overall performance of the radio itself, is about the same...which is excellent!

We should see dealers discounting BC895-XLT's to about $149.00, to clear their inventories. The new BC898-T is going on the average for around $219.00.

If I remember correctly, there is a resistor between the headphone
jack sleeve and ground. Short it or reduce it's value. Simple test -
short the headphone jack mounting nut to the BNC antenna jack and see
if the volume increases. Try this at your own risk, my memory ain't
what it used to be.

1479. Trunking Code Lockout ???

Newsgroup: rec.radio.scanner
Date: 2004-08-13 16:04:43 UTC
From: fre <fre@mon.com>
Message-ID: <cfioqd028hl@enews3.newsguy.com>
Source record: 18894

I have a BC-235.
I have a scanlist programmed in.
When I lockout trunk codes in the scanlist.... they are
also locked out while in the trunk search mode.

But... if I lock out a trunk code that ISN'T in the scanlist
while in Trunk Search mode.... How do I unlock it? How
do I get to it to unlock it?
Or are all codes (that are not locked out on the scanlist) automatically
unlocked every time you start a new Trunk Search.

1480. PRO-90 and the Truck part of this device

Newsgroup: rec.radio.scanner
Date: 2004-08-13 19:12:43 UTC
From: Nelson <nelson122@cogeco.ca>
Message-ID: <No8Tc.3256$0c.1491@read1.cgocable.net>

1st go to radio shacks web site and d/l the manual for it. That's the
only real way to figure out how it works. I owned one for 3 years and
every now and then I had to look up how to do an obscure funtion.

The Huricane Net has been activated. 14.325 MHz USB.

http://www.hwn.org/

Mostly daylight hours until evening propagation shuts it down.

Thanks Donald, I have been listening there on and off, but no joy - guess they QSY just about when propagation to my location (VK) would be feasible. Mind you, probably not the best chance of hearing them with only an 80m dipole.

Matt

1488. Philadelphia WX station Off Air?

Most of the HWN members are using rotatable yagis and beams on 100' towers
with 1kw+ pwr. If you are not in their lobes it might not be a good signal.
Along the coast, I normally hear the net control stations very well, even on
a 60mtr dipole. They continue on that freq long into the night sometimes.
That band fades for me after darkness except from strongest of stations.

One problem with 40m down in VK - bloody asians broadcast stations make it unuseable above 7.100 MHz. With a 40m Dipole, I am receiving 30 over interference from adjacent freq transmitters. Unfortunately no hope - ah well, maybe another freq.

Some things to check...

Many computers have more than one serial port, COM-1, COM-2. Are you certain it's plugged into the correct RS232 port on your computer? Is the baud rate the same on both the radio, and the computer?

Is it possible that something else you installed in the mean time may be
taking control of the serial port? Also, if you are running Palm software,
that is known to cause problems with the serial port.

Check to see what serial port the modem, if any, uses on your computer.
The PCR-1000 must NOT be assigned to that port. You can check the port by
going to control panel and then modems. Also make sure that you are
connected to the correct port on the back of the computer. As far as
programming the EEPROM, that is a last resort and only use a copy saved
from your PCR-1000. Coule of othere things, have you tried a different
serial cable? (could be bad)Does the rX work when connected to a different
computer. In othere words does it just not work on your machine or on all
machines ??

BTW you willnot be able to re-program the EEPROM until you fix this
problem, since it is done over the serial connection,

When you fake a response to a question for the purpose of SPAMING the group - learn how to make it look real.

1511. Software for the new Uniden BC898-T?

Newsgroup: rec.radio.scanner
Date: 2004-08-15 12:27:37 UTC
From: Bill Crocker <wcrocker007@comcast.net>
Message-ID: <pIKdnceDld4Iy4LcRVn-pQ@comcast.com>
Source record: 18826

Anyone see any software for the new Uniden BC898-T? Some claim it's on Uniden's web site, but all I find is a PDF documentation file, for the programming code, and it appears to be corrupted.

Thanks,
Bill Crocker

Mass Killings Ordered, Committed, Or Approved By God
The entire population of the earth at the time of Noah, except for eight survivors, in a flood. "And every living substance was destroyed which was upon the face of the ground, both man, and cattle, and the creeping things, and the fowl of the heaven; and they were destroyed from the earth: and Noah only remained alive, and they that were with him in the ark." Gen. 7:23
Every inhabitant of Sodom and Gomorrah, and of the surrounding plain, by "brimstone and fire from the Lord out of heaven." Gen. 19:24 Lot's family fled.

All the first-born of every family in Egypt, including children of those in the dungeons and the successor to the throne of Egypt's Pharaoh, by God on the first Passover night. Ex. 12:29

All the hosts of Pharaoh, including the captains of 600 chariots, who drown in the Red Sea while pursuing the Israelites. ". . . and the Lord overthrew the Egyptians in the midst of the sea."
Ex. 14:27,28

Victims who perish in the conquest of seven nations in Canaan by the Jews under God's guidance so that the Jews can occupy their lands as God had promised Abraham. "When the Lord thy God shall bring thee into the land whither thou goest to possess it, and hath cast out many nations before thee, the Hittites, and the Girgashites, and the Amorites, and the Canaanites, and the Perizzites, and the Hivites, and the Jebusites, seven nations greater and mightier than thou; And when the Lord thy God shall deliver them before thee; thou shalt smite them, and utterly destroy them; thou shalt make no covenant with them, nor shew mercy unto them." Deut. 7:1,2

Amalek and his people, by the edge of the sword. "Because the Lord hath sworn that the Lord will have war with Amalek from generation to generation." As long as Aaron helped Moses to hold up his hands, the Israelites prevailed. Ex. 17:11,16 At times of crisis, the Lord often waxed whimsical.

3,000 Israelites, massacred by their Levite tribe at the command of the Lord for worshipping the golden calf. "Take every man his sword by his side, and go in and out from gate to gate throughout the camp, and slay every man his brother, and every man his companion, and every man his neighbour." Ex. 32:27 These were the orders of a God who would brook no disloyalty, a self styled "jealous" God.

Rulers of Israel, 11 in number, who refused to invade the Promised Land after they had spied on it for 40 days. God kills them with a plague. Num. 14:37

250 Levite princes of the Jews who challenged the leadership of Moses. God would have killed the whole congregation, if Moses hadn't pointed out the injustice of such a course of action. Owing to Moses's plea for sanity, the Lord repented somewhat and re-fashioned the punishment. Letting his compassion prevail, he proceeded to open up the earth and bury alive "the wives, sons, and little children" of two of the princes, then sent a fire that consumed the remaining princes. The rest of the congregation, properly terrified, next made a covering for the altar out of their incense braziers. Num. 16:1-40 God was finally mollified.

14,700 Jews in a plague, because they rebelled against Moses after the killing of the 250 princes. At last Aaron makes atonement with incense to stop the plague. Num. 16:41-49

The Canaanites at Hormah, utterly destroyed by the Lord at the request of the Jews. Num. 21:3

The Amorites at Heshbon. Israel "took all these cities." Moses summed up the slaughter: "We . . . utterly destroyed the men and the women and the little ones." Num. 21:25 and Deut. 2:34

All the sons and subjects of Og, about whom the Lord said to Moses: "Fear him (the king of Bashan) not, for I have delivered him into thy hand." None was left alive. Num. 21:34,35

24,000 Israelites who co-habited with Moabite women and worshipped Baal. "And the Lord said unto Moses, Take all the heads of the people, and hang them up before the Lord against the sun . . ." Num. 25:4,9

All the males and kings of the Midianites, because they worshipped idols, and all their wives and male children. "And the Lord spake unto Moses, saying, Vex the Midianites, and smite them. Num. 25:16,17 Num. 31:7,8

The subjects of two kingdoms on the east side of the Jordan, in order that Reuben and Gad might seize these realms for their own as a gift from God. Num. 32

The Ammonites, decimated by the Lord so that Lot might possess their land. Deut. 2:19-21

The Horims, slain by God in order that Esau might acquire their land. Deut. 2:22

All the citizens of Jericho, except for a prostitute and her family. "And they utterly destroyed all in the city, man and woman, young and old, and ox . . . with the edge of the sword." Josh. 6 "They" make a grisly game of it, using the superstitious number "7" popular in the Bible, trumpet blasts, and marches around the doomed city. Joshua competes with Moses, the leader he replaced, for title of No. 1 Murderer (God's hit man) of the Old Testament, as he follows God's orders.

Men of Ai, and the women and children, 12,000 in all (and the city burned), in a treacherous ambush conceived and directed by God. Joshua and his men smote them with the "edge of the sword." With the usual biblical hocus-pocus, Joshua held out his spear at arm's length until all the

inhabitants were killed, then built an altar and sacrificed to God to celebrate the victory. (God always has demanded recognition of his beneficence!) Joshua hanged the king of Ai on a tree. Josh. 8:1-30 (Jesus was also to be "hanged on a tree." The precedent builds.)

The armies of five kings of the Amorites, who beseiged Gibeon. "And the Lord . . . slew them with a great slaughter." He then chased the survivors and killed more of them with hailstones. Josh. 10:10,11 (The rest of the world apparently had to muddle along the best it could, while the Supreme Being was pre-occupied with the war games of some Semitic tribes. "You only have I known . . ." Amos 3:2)

The five kings of the Amorites after being shut up in a cave and then brought before the congregation. Joshua exhorted his fellow Israelites to: "Come near: put your feet upon the necks of these kings. Thus shall the Lord do to all your enemies." He then slew all five and hanged their bodies. Josh. 10:16-26 The Bible specializes in such horror tales and yet is considered a proper book for children, in full confidence of its not being read.

All the people of Makkedah, and their king hanged, by Joshua. Josh. 10:28

All the people of Libnah. Not a soul remained; all were delivered to Joshua by the Lord. Josh. 10:29,30 Joshua and God were agreed upon capital punishment.

All the people of Lachish, by Joshua. Josh. 10:32

All the people of Gezer. "And Joshua smote him and his people, until he had left him none remaining." Josh. 10:33 Joshua continues to display the sterling qualities that win favour with the Boss.

All the people of Eglon. "They left none remaining." Josh. 10:34,35 (The Old Testament is a mixture of brutal history, poetry, narratives, and philosophy.)

All the people of Hebron. "All the cities and souls that were therein." Josh. 10:36,37

All the inhabitants of "the country of the hills, and of the south, and of the vale, and of the springs and all their kings; he left none remaining but utterly destroyed all that breathed, as the Lord God of Israel commanded." Josh. 10:40 God's communications with Joshua usually took the form of military communiques, and Joshua was nothing if not a "clean sweeper."

All 31 kings and inhabitants of their countries, of the hills and south country and land of Goshen and the valley and the plain and the mountain of Israel and the valley of the same from Mt. Halak to Mt. Hermon. "As God commanded Moses." Josh. 11:12,16,17 and 12:24 Joshua was happy to do Moses' dirty work, but the logistics must have been mind boggling.

The inhabitants of Gaza, Askelon, and Ekron, killed by Judah and Caleb. "And the Lord was with Judah." Judges 1:18,19

10,000 Moabites, by the Israelites. ". . . and there escaped not a man." Judges 3:29

10,000 Perizzites and Canaanites, conquered by Judah and Simeon. Judges 1:4 (Whoever did the body counting always came out with a nice round figure.)

600 Philistines, slain with an ox goad by Shamgar. Judges 3:31

All the hosts of Sisera. "And all the hosts of Sisera fell upon the edge of the sword." Judges 4:16 (Old Testament swords all had edges, no points.)

120,000 Midianites by Gideon and his 300 men. Judges 8:10 All but one, who managed to escape, of his 70 step-brothers by Abimelech, the son of one of God's favourite torturers, Gideon, in order to gain for himself the throne of Israel. Judges 9:5 Like father, like son.

30 young Philistines by Samson, furious after they guess his riddle. "The spirit of the Lord came upon him." Judges 14:19

Many Philistines with a "great slaughter" by Samson, because they burned his former wife and her father to death to avenge Samson, mistakenly thinking to win his approval. Judges 15

All the lords of the Philistines and a houseful of men and women, including 3,000 on the roof, who perished when Samson pulled down the pillars, after calling upon God to restore his strength. "So the dead that he slew at his death were more than they which he slew in his life." Samson's bloody score included 1,000 Philistines slain with the jawbone of an ass when "the spirit of the Lord was upon him." Judges 15:14 and 16:27,30 (Is this the Holy Spirit that enchants the clergy?)

25,100 Benjamites, who, with God on their side, fought against their fellow Jews. Judges 20:35

50,070 people of Bethshemesh, struck dead by God, because a few of them who were working a field happened to glance into the Ark carrying the stone tablets of the Ten Commandments. "And the people lamented, because the Lord had smitten many of the people with a great slaughter." I Sam. 6:19 God kept grave-diggers of the Old Testament working overtime burying innocents.

Philistines killed under Samuel. "And the hand of the Lord was against the Philistines." I Sam. 7:13 (Does God really like anybody?)

Philistines killed by Saul and Jonathan. "For the Lord hath delivered them into the hand of Israel." I Sam. 14:12,13,20

The Ammonites who threaten Jabesh, slain by Saul and the children of Israel "so that two of them were not left together." I Sam. 11:11

All the Amalekites killed by Saul upon God's orders. "Slay both man and woman, infant and suckling. . ." I Sam. 15:3,7 (Bottle feeding was definitely recommended.)

Thousands of Philistines slain by David's armies. "Saul hath slain his thousands, and David his ten thousands." I Sam. 18:5,6,7 and 23:5; II Sam. 5:25 and 8:1

200 Philistine men, killed by David to obtain their foreskins with which to purchase Saul's daughter to be his wife. I Sam. 18:27 (But that's minor surgery!)

The Geshurites and the Gezrites and the Amalekites slain by David, "leaving neither man nor woman alive." I Sam. 27:8,9 (What about the infants and sucklings?)

The Jebusites, killed by David when he captured Jerusalem from them. ". . . and smiteth the Jebusites, and the lame and the blind . . ." II Sam. 5:6,7,8

The Moabites and 22,000 Syrians by David. "And the Lord preserved David." II Sam. 8:2,5,6,14

40,000 horsemen of the Syrians, killed by David. II Sam. 10:18 (The horses, too?)

The children of Ammon, by David's men. II Sam. 11:1

The Ammonites of Rabbah and other cities, tortured to death by David. "He put them under saws and under harrows of iron and made them pass through the brick kiln." II Sam. 12:31 (David, today the patriarch most revered by the Jews, was a man who lived by the values and customs of his age.)

Every man in Edom, killed by Joab and David. I Kings 11:15

The murderers of one of Saul's sons, sentenced to death by David. "And David commanded his young men, and they slew them, and cut off their hands and their feet, and hanged them up over the pool . . ." II Sam. 4:7,12 Such deeds are typical of the behaviour of God's favourites in the Bible. Even though it was customary behaviour at the time, surely Almighty God's standards of morality should not fluctuate.

70,000 victims of a pestilence sent by the Lord, because David chose it as his punishment for taking a census. II Sam. 24:15

450 prophets of Baal, killed by Elijah. "And the hand of the Lord was on Elijah." I Kings 18:40,46 (God's motto was "better dead than mis-led.")

100,000 Syrian footmen, slaughtered in one day by the children of Israel. "Thus saith the Lord, Because the Syrians have said the Lord is God of the hills, but he is not God of the valleys; therefore will I deliver all this great multitude into thine hand . . ." A wall falls on the 27,000 who are left. I Kings 20:28,29,30 (That certainly got God the valley vote!)

100 Moabite troops, consumed by fire from heaven called down by Elijah when they question whether he is a man of God. II Kings 1 Wholesale murder is proof of Godliness in the Bible.

42 children eaten by two bears, after Elisha curses them in the name of the Lord for making fun of his bald head. II Kings 2:23,24 (Similar nightmarish tragedies happen in fairy tales, but there they aren't perpetrated by God.)

All who died in a 7-year famine sent by the Lord on Samaria. II Kings 8:1

70 children of King Ahab of Israel, and all the rest of Ahab's "house," after God decreed they should all be destroyed. The heads of the children are put into baskets at the gates of the city. II Kings 9:8 and 10:1-11 (Baskets full of heads!) All of this was engineered by Jehu, whom God had chosen to succeed Ahab to the throne.

42 children of the king of Judah, by their uncles, at Jehu's command. Elisha is the medium through which God communicates his inhuman demands for the annihilation of these entire families, and Jehu is all too eager to comply: "Come with me, and see my zeal for the Lord." For all his savagery he wins the praise of the Lord: "Thou hast done that which is right in mine eyes and hast done unto the house of Ahab according to all that was in mine heart." II Kings 10:12-17,30 The God of the Christian Bible has little regard for the family as such.

All worshippers of Baal in Samaria and Israel by 80 guards at the direction of Jehu. The victims were tricked into attending a Baal worship service where they were all butchered. "And they smote them with the edge of the sword." II Kings 10:18-25

185,000 Assyrians slain by one angel overnight. Thus the Lord defended Jerusalem. II Kings 19:35 The Christian conception of an angel puts a halo (much needed) on the Old Testament variety.

All the priests of heathen gods in Judah, slain by King Josiah. II Kings 23:20

500,000 men of Israel by King Abijah of Judah and his men. "God smote . . . all Israel before Abijah and Judah." II Chron. 13:16,17,18 This atrocity was the result of civil war between Israel and Judah.

10,000 Edomites killed by Amaziah's men, who then carried away 10,000 more and "brought them to the top of the rock, and cast them down from the top of the rock, that they were all broken in pieces." II Chron. 25:11,12 Amaziah accepted the Lord's advice on this campaign.

120,000 Judeans, massacred in one day by King Pekah of Israel, "because they had forsaken the Lord God." He also took 200,000 women and children captive as bondmen and bondwomen. These are all fellow Jews. II Chron. 28

500 subjects of a Persian king and the ten sons of Haman who meet death as the result of the machinations of Queen Esther on behalf of her Jewish countrymen. Haman suffers the same fate. Esther's uncle Mordecai and the other Jews throughout the kingdom had refused to abandon their Mosaic law. Esther 3:5,8 and 7:10 and 9:1-14

75,000 Persian subjects of King Ahasuerus by the Jews, urged on by Esther and Mordecai. Esther 9:16 Esther's part in this is celebrated by a festive Jewish holiday, in which she is honoured for saving her fellow Jews. It is called Purim.

Job's children and servants by God in a contest with Satan over Job's loyalty to God. Job 1:13-19

Hi Folks,

Now, I realize this scanner is fairly old - but I was really hoping someone would come to my rescue on a semi-technical question.

I've owned the unit for several years and while it's a decent enough radio, I still have no idea how or when to use the 'voice inversion' feature. Since everything I like to monitor comes in A/OK - I'm at the point of of thinking this 'feature' is of no use. (To me anyway)

What do you experts use it for when scanning? Is it something that might enhance *my* scanning fun in some way? (I listen to everything, but my favorites are Police, Fire, Rail and Air)

What is this feature and does it help when scanning "generic" radio comms?

Thanks as always.
Mike

Yes the Japanese, and European, versions are unblocked. Only the US has
that ridiculous requirement.

Other than being off topic, how did that make him a psycho? It's all
in the Bible and assumed to be true by it's believers.

How about 2.4 GHz band? Most scanners don't cover that band. I'm just
wondering if it is easy to modify the phone to use it as a receiver. I
could buy a used one for about $5 in garage sale.

You're right, scanners that go up that high are definitely more expensive, although not hard to get. However, most, if not all, of the 2.4 GHz phones use digital and/or spread spectrum encoding or other forms of encryption or "anti-scanner" techniques, so it wouldn't do any good even if you could modify the phones. Eavesdropping has gotten a lot harder lately.

Source record: 18843

Loading up the VX-7R with emergency freqs for Tampa area - any opinions on the best local AM emergency broadcast station? FM? I have all SkyWarn and amateur freqs, police and emergency and most of the major ones, but curious as to the best local AM emergency broadcast freqs for things such as road closings, traffic congestions, etc. The Yaesu VX-7R has become my fav radio for emergency situations - the only thing it won't do is trunk track. As soon as they come out with a trunk-tracking extended receive quad band amateur transceiver I am SOLD heh

Thanks -

Hello:

Setting up my scanner.

For the Coast Guard frequencies around 156 and 164 MHz, do I want to set the mode as "FM" or "NFM" ?

Might as well also ask: In general, where are each used ?

Thanks,
Bob

(W)FM with BW of around 200khz is regulary used only for radio and TV broadcasst.

(N)FM transmission have BW of 12-16khz and 20 or 25 khz channel spacing in very most cases. One exception for example are (NOAA-)weather satellites using BW of 30-35khz.

An ancient rig "collecting dust"? That's not exactly a smart phrase to
use, but try giving it to someone who
can appreciate it. You won't collect any pocket change that way, but
you'll earn a friend for life.

However, if that idea sounds ridiculous to you, then
maybe if you started using it again, you'll rediscover
the reason you bought it in the first place?

1534. Coast Guard Aero Freq's: AM ?

Newsgroup: rec.radio.scanner
Date: 2004-08-17 16:49:04 UTC

Hello:

Have the following Coast Guard frequencies, which I "think" are aero
related, and aero Search & Rescue.
(but not 100% sure)

Realize that just about everything above 30MHz that they use is FM, but what
about their aero stuff? AM ?

Specifically:

162.325
164.550
166.225

137.150
381.700

Are these AM ? If not, which ?

Is there a site that lists all C.G. freq's, and their modes ?
Have been able to find for their FM broadcasts, but nothing concerned with
aero. ?

Thanks,
Bob

There are some pretty small scanners available, I'm currently using an Icom R5 which is about the size of the smaller cellphones out today. You can get very small general use antennas as well, I use a 3/4inch one and a 1.5inch one for most things. Plug a discreet earphone into it and route the wire through your jacket and it looks as though your using a handsfree cellphone.

Also, take a look at the Scott E-Vest http://www.scottevest.com/ for clothing that is somewhat 'stealthy' for carrying gear.

The ic-r5 software is basically the best out right now, I don't recommend
Icom's software. If you can wait a little while, the makers of the ARC780
software have a program coming out for the R5.

>> Loading up the VX-7R with emergency freqs for Tampa area - any opinions on the best local AM emergency broadcast station?

WFLA / 970 did a good job with hurricane coverage last week, before Charley came ashore. I can't tell you how good they are with traffic, news and weather on a normal basis, though.

Interestingly, Clear Channel apparently fed WFLA's audio to some of the other AM and FM Clear Channel stations in the Tampa area during last Friday.

WFLA uses different directional antenna patterns day and night, but I can't advise of how well their signal covers the Tampa region or state.

They also webcast, which is what I was listening to last Friday, and the server connection was very solid throughout the day and evening. The audio level varied alot, though, and they transitioned between the studio personalities, location reports and commercials.

Funny, most hams I know are into trunking big time. But, most hams I know are only into vhf/uhf comms as well. I suppose your observation would be the fact for most gen/extra class hams who operate mostly on HF. Haven't heard too many of them discuss trunking on their nets or elsewhere. Good point there.

Um,

Can you define what you mean by "trunking?" Do you mean listening to monitoring systems that are trunked, or do you mean using trunked ham radio systems? (I which case I've got a WHOLE BUNCH more questions to ask...)

I am unaware of any hams using trunking for ham systems. Thus there is little drive to include trunking features into ham HTs.

-D

Source record: 18716

Plectron R-720, Date shipped according to tag on rear: 1975. Currently on 154.355 / tones unknown (has been changed from what is listed on the back). Very clean and in good working condition. Nice addition for someones collection.

Minitor II with charger and new battery (on 154.235). Also will include two NON WORKING Minitor II pagers, good for parts. Good cases, belt clips and total of 5 tone reads inculded.

Sell for best offer or trade on other radio equipment or volunteer fire lights.

E-mail questions or offers to: K5DIE@insightbb.com or change "five" to "5" to auto reply.

Thanks.

1557. Texas Balloon Launch Team (BLT) to fly ham radio and GPS this saturday 10am

Newsgroup: rec.radio.scanner
Date: 2004-08-19 00:38:48 UTC
From: Craig Davidson <nospam@earthlink.com>
Message-ID: <sESUc.27239$9Y6.24209@newsread1.news.pas.earthlink.net>
Source record: 18722
Cross-posted to: rec.radio.scanner,rec.radio.shortwave,rec.radio.amateur.space,rec.radio.amateur.homebrew,rec.radio.amateur.equipment,rec.radio.amateur.digital.misc

It's time again for the Texas Balloon Launch Team (BLT) to fly their 20th mission.

The Primary GPS APRS transmitter is on 440.950 Mhz FM

The Backup GPS system transmits on: 445.925 MHz FM

There is also a Crossband voice Repeater on the balloon which transmits on 446.000 MHz FM

In addition there will be a Live television Camera transmitting its signal on
1255 MHz FM

The balloon will take about one hour to rise to 100,000 feet where the balloon explodes and the electronics payload parachutes back to earth for another hour. You should be able to hear the balloon transmitting from over 300 miles away.

They will launch from the same airport in Wharton Texas (http://www.airnav.com/airport/5R5) on Saturday morning at 10am and will use most of the same equipment as BLT 19 last year. If the frequencies or launch site change then I will post another message by Saturday morning. The airnav web page shown above has a handy distance calculator where you can enter the code for your local airport and it will tell you the distance from wharton.

The GPS coordinates transmitted from the balloon are used to locate the landing site.

The electronics package is also fitted with a Piezoelectric beeper to help the recovery
crew find the payload in "that last 100 feet of tall grass".

See the photos from previous missions at:
http://www.qsl.net/w5acm/b18_1825.html
http://www.qsl.net/w5acm/b18_1826.html
http://www.qsl.net/w5acm/b18_1827.html
http://www.qsl.net/w5acm/b19.html

For all the non hams out there:

The GPS data is transmitted in APRS format.

To learn more about APRS click here:
http://www.tapr.org/tapr/html/sigf.html
http://web.usna.navy.mil/~bruninga/aprs.html

Receivers are available from Ham radio stores such as Amateur Electronic Supply http://www.aesham.com/ or Ham Radio Outlet http://www.hamradio.com/ Or you could look on Ebay for a 440 MHz FM receiver. You can also get a police scanner from Radio Shack to do the job. Make sure it receives the proper frequency.

You also need an antenna. I recommend the arrow antenna to get started:

http://www.arrowantennas.com/146-437.html

You will also need a packet modem to decode the APRS audio tones. The Kantronics KPC3 is an example http://www.kantronics.com/kpc3+.htm These units plug into the speaker jack of the receiver and also to the RS232 serial port of your computer.

Or you could try to decode the audio tones with software and your sound card instead of buying the modem above. Check out these web sites for packet software:

http://www.qsl.net/soundcardpacket/
http://packetradio.com/rascalmkv.htm
http://www.elcom.gr/sv2agw/agwsc.htm

1561. BC780XLT sensitivity on 26-27 Mhz

Newsgroup: rec.radio.scanner
Date: 2004-08-19 02:59:13 UTC
From: Frank Bals <fjb@worldnet.att.net>
Message-ID: <5IUUc.223402$OB3.148965@bgtnsc05-news.ops.worldnet.att.net>
Source record: 18726

Mine seems a bit low when scanning the CB frequencies. I'm using a good 4 foot CB whip, so I know it's not the antenna. VHF Low Band all the way up to 800 Mhz is good. It's a great radio, especially for Milair. Anyone else notice low sensitivity in the CB range?

Frank

1562. BC760XLT

Newsgroup: rec.radio.scanner

1565. Re: Tampa Area Emergency Radio?

Newsgroup: rec.radio.scanner
Date: 2004-08-19 11:23:03 UTC
From: ScanMan <nospam@verizon.net>
Message-ID: <r40Vc.22917$Kf4.8916@nwrddc02.gnilink.net>
Source record: 18730

After some research I found that AM 940 WEOC is the absolute best emergency AM radio station in the Tampa Bay area, broadcasting during emergency situations 24/7 - and they were apparently a lot of help to folks during Hurricane Charley. Thanks anyway to those that replied, and hope this info helps someone else as well.

Their website http://www.pinellascounty.org/communications/WEOC_radio.htm

(WEOC - Emergency Operations Channel?)

1566. AM Or FM For These Freq's ?

Newsgroup: rec.radio.scanner
Date: 2004-08-19 11:47:44 UTC
From: Robert11 <rgsxrose@comcast.net>
Message-ID: <0L-dnc8pno6yDrncRVn-gA@comcast.com>
Source record: 18731

Hello:

New athis hobby.

The following, I think, but am not sure, are Coast Guard Aero frequencies.

Can anyone perhaps verify that for me, and irrespective of whether they
are, or not, please tell me whether they are AM or FM:

123.100 - U.S. Coast Guard - VHF S.A.R. Primary
122.900 - U.S. Coast Guard - VHF S.A.R. Secondary
381.800- U.S. Coast Guard - UHF S.A.R.
282.800- U.S. Coast Guard - UHF S.A.R.
126.200- U.S. Coast Guard - Ground-to-Air Operations

Are "all" aero related freq's over 30 MHz always AM ?

Thank you,
B.

All of the above would be AM.

>Are "all" aero related freq's over 30 MHz always AM ?

Aero related, not necessarily. Where aircraft are actually
communicating by radio, though, this is usually the case.

i say this because there are freqs above 30 MHz where the comms are
aero related (ground support functions at airports for example) but
are not AM, they're usually NFM. The FAA's freqs in the government
bands are another example - certainly aero related, but not AM.

The reason aircraft radios are in AM is that back in the early days AM
was the standard, and by the time FM became a standard for two-way
comms, there were just so many aircraft out there with AM radios that
replacing them all would have been a major nightmare, for financial
and other reasons...especially for commercial airline companies that
would have hundreds of radios to replace.

One benefit of using AM is that most AM receivers are susceptible to
receiving harmonics of the frequency they are tuned to. Thus, at an
air traffic control tower, a receiver tuned to the civilian aircraft
emergency frequency of 121.5 will pick up transmissions from nearby
military aircraft transmitting on the military air band emergency
frequency of 243.0 (often referred to as "guard") as well.

I've noticed a few posts from you along similar lines, so as a general
guideline:

Aircraft transmissions in the civilian air band (108-136 MHz) and the
military air band (226-400 MHz) are generally going to be AM. You will
hear other signals in these ranges...there are navigation systems
operating in these bands, and in the milair band there are military
satellites that use wide band FM and digital modes and/or are
encrypted. Air Force One often uses wide band FM here as well, but

when talking to civilian towers on VHF they will be in AM, which is the standard for that.

You'll also find AM outside those ranges, in use by military aircraft. If you're scanning in the 148-151 MHz range, for example, you may well hear military comms in AM mode there...assuming you have a receiver that allows the user to select the AM mode here (many commercial scanners default to FM here and if the user cannot override the default choice of FM, he/she experiences buyer remorse if he/she is a milair buff).

FWIW, below 30 MHz most aero comms are on upper sideband (USB). However, that's a discussion for rec.radio.shortwave. :-)

Hope this helps.

>Programming frequencies into the thing was no problem, but I just
>can't figure out how to program a limit search. I've tried everything

The MX-5000 was/is the same as the AOR AR2001. The operating manual for
the AR2001 is available in PDF format at:

http://www.aoruk.com/pdf/ar2001m.pdf

The MX7000 is "the same" but with extra 800-1300MHz coverage whilst the
MX-8000 is the same as the AR2002.

For the most part, yes, they are all AM, with a few exceptions, very
few. Anything in the 108-138MHZ range is AM, and almost anything from
250-400MHZ is. There are some oddballs, but probably nothing to worry
about missing.

It's very hard to get a RS232 cable for the Uniden Bearcat 3300XLT scanner in the Netherlands, andit's not included with the scanner. That's why i'm thinking to make such a cable myself, but I do not have the pinout. (I'm not even sure it's a cable only or cable with some electronics)

I guess the 3300XLT uses the same cable as the U.S. models BC250D and BC296D.

Could someone measure the cable aand give me the pinout when there is no electronics in the cable.

Harry

The reason is that two simultaneous AM signals are heard as two signals,
while two simultaneous FM signals are heard as only the stronger signal
(possibly with hash if the weaker signal isn't a lot weaker). It's
of overriding importance to be able to hear a second station on frequency
in case of emergency and busy frequencies.

1585. Trunking question??

Newsgroup: rec.radio.scanner

I have a BC-235.
I have a scanlist programmed in.
When I lockout trunk codes in the scanlist.... they are
also locked out while in the trunk search mode.

But... if I lock out a trunk code that ISN'T in the scanlist
while in Trunk Search mode.... How do I unlock it? How
do I get to it to unlock it?
Or are all codes (that are not locked out on the scanlist) automatically
unlocked every time you start a new Trunk Search.

> completely new at this.
>

Just manually go to channel 2: hit manual 2 manual

Press the Lockout key. It should be unlocked...

Hi,

just got myself an icom r20. It is a little bit hard to get the standard pc connection cable and software where I live.

Are there any alternatives? I have a number of USB/firewire/1394 cables but non of them have the connector that fits into the R20. Is it a propietary one?

I've found the IF20USB on www.butel.nl, but this is not available yet.

Will the R20 mount like a normal removable disk, so i could transfer the audio files easily?

Ron

Hi Ron,

The cable end is very similar to the ones that are used for video cameras. Having said that, you need a USB driver that is compatible with the radio for it to work. The radio doesn't appear to the computer like a drive, but rather like a new device.

I got my software from Grove in the U.S., mainly because they had it in stock and I couldn't get it anywhere in Australia.

I know - but I left that out because I didn't know the tie colors, lol.

General Electric had a similar dress code, and so did a few others, just not
as strict as Big Blue.

I'm writing in regards to the FCC's Emergency Alert System. I am a hobbyist trying to set up a system to listen for EAS broadcasts in my area, but although I've read over the documentation on the matter (11.31, 47CFR)*, I can't figure out what the frequency to listen on should be. Can anyone offer any guidance on the subject?

Thanks,
Rob

thanks. I have a ham tv reciever I bought (not a transmitter, just a reciever). and

in order to find out when some such transmissions were scheduld, I attempted to subscribe to Amateur TV Quartery magazine. filled out the form and mailed it, But

All I got back was a letter (and returned uncancelled check, still good. didn't bounce) saying that "ATVQ magazine is only for ham operatrors" and that since I'm not a ham, I"m "not allowed to subscribe to ATVQ" and that "no further discssions will be made on this issue" and that all attempted future discussions on this issue "will be ignored'.

my comments on this: 1. On the plus side, at least they're not money-greedy since they didn't even try to cash my check.

2. On the minus side, they're obviously the type of hams of the mind that "we're an exclusivve group and we don't want any new members. Only already existing members are allowed in."

Unfortunately, I missed attempting to see the launch at the scheduled time. (I was too busy sleeping. ;))

However, I don't think I would have been able t see or hear any of those particuar rasmissins today anyways as I think Im way over 300 miles away from the transmitters anyways.

and phooey on ATVQ.

I can attempt to find planned ATV transmissions elsewhere, thanks to the internet.

they're the ones that lost money by refusing to let me subscribe to their magazine. which also saved me the same amount of money since I was able to use the money elsewhere.

so it wasn't any great loss to me. It actually saved me some money. :)

I did try around noon, even though I knew that was probably way too late since it was the end of the 2 hours transmission.

And of course, all I recieved on that frequency n my ICr3 ham tv recierver was snow.

Even though it's not a good reciever for such, I think I really am too far away from those transmitters to pick up anything except snow from here, even with a good ham tv reciever.

Source record: 18668

I recently purchased a trunk tracking scanner that is able to receive EDACS trunked systems. I have the ID's programed in so I know who I am hearing. The past few days a new ID has been using the system that I do not have and the list I used for the other ID's does not contain the new ID. This is a public saftey system that contains the Onondaga county fire, EMS, and a few others. Is there somewhere that contains listings of ID's allowed to use the system? Anything on file with FCC or other agency that I can find?
Thank you for any help you can privide. Google and other searches have come up empty.

Have purchased ScanCat, Radio Manager, ARC780.. Of those 3 the ARC780 seems to have more features. However, I don't like the way the mouse works with the ARC780 and don't seem to be able to program a priority channel and write it to the radio. I understand that Scan Control will do that. Would appreciate feedback from users using the Scan Control program.

Thank You..

The system frequencies are a matter of public record via the FCC. Not so for
any fleet mapping, sub-fleets, unit ID's etc. Listeners like yourself are
the only source for that information.

Section 11.11 The Emergency Alert System (EAS).

(a) The EAS is composed of broadcast networks; cable networks and
program suppliers; AM, FM and TV broadcast stations; Low Power TV
(LPTV) stations; cable systems; wireless cable systems which may
consist of Multipoint Distribution Service (MDS), Multichannel
Multipoint Distribution Service (MMDS), or Instructional Television
Fixed Service (ITFS) stations; and other entities and industries
operating on an organized basis during emergencies at the National,
State and local levels.

It uses regular AM, FM, and TV broadcasts stations as well as NOAA weather.
There are no separate frequencies used for these--it is a "system" for
alerting the public rather than a "net" of dedicated frequencies. Two way
links or subcarriers associated with the bropadcast stations are used for
linking and there are some HF stations on the FEMA HF frequencies that have
been very rarely heard that help provide link in case wire and other links
fail. In other words, it uses already existing radio systems rather than
having its own and the local frequencies depend on the local area.

See instead
http://www.fcc.gov/eb/eas/plans.html
for your state for additional information.

All broadcast stations are required to originate a Required Weekly Test
(RWT). They are also required to relay a Required Monthly Test (RMT)
that originates elsewhere. Many stations voluntarily air other alerts
(usually weather-related) but are not required to do so.

Your local NOAA weather radio (162.4-162.55MHz) also carries these, as
well as EAS broadcasts of severe weather watches and warnings.

Source record: 18680

The balloon was in flight from about 10:45 am until around 12:30pm yesterday. It reached an altitude of over 82 thousand feet.

Sorry you missed us. Were you listening on 446.0 MHz FM voice? We had several contacts from Austin to Galveston all the way to the border with Mexico.

The video signal at the launch site was very strong. they were using ten element beam antennas mounted on camera tripods. What city were you listening from? What kind of antenna were you using?? Do you have a microwave preamp mounted at the antenna to overcome coax losses?

---
c28k@webtv.net wrote ...
I did try around noon, even though I knew that was probably way too late since it was the end of the 2 hours transmission.

And of course, all I recieved on that frequency n my ICr3 ham tv recierver was snow.

Even though it's not a good reciever for such, I think I really am too far away from those transmitters to pick up anything except snow from here, even with a good ham tv reciever.

1615. pc scanner card

WTB FREQUENCY METER

1619. Pro - 37 will not recieve

Newsgroup: rec.radio.scanner
Date: 2004-08-23 00:23:50 UTC
From: juny <juny57@rcn.com>
Message-ID: <n2eii05hukr06sif7pj0tikabo29ejs01v@4ax.com>
Source record: 18684

Old Pro - 37 worked previous to storing it in drawer a few years. Now only gets FM broadcast bleed-over.
(Note - did not have batteries in unit during storage and had to do a "hard" reset with internal button to get it to turn on).

Tried NIHMs and wall wart. - NG either way.

Any ideas?

juny

1620. What happens when a 2-way radio gets lost?

Newsgroup: rec.radio.scanner
Date: 2004-08-23 01:43:19 UTC
From: kc7jfv@hotmail.com
Message-ID: <781c67d2.0408221743.78878312@posting.google.com>
Source record: 18685

Always wondered about it.
Let's say the "bad guy" steals the police radio.
I'd assume there is a way to disable the unit to not be able to transmit.
But it would still be able to receive very well.

Any thoughts?

1621. Help - PRO-37 will not recieve after sitting in drawer a few years - without batteries (any suggestions)

From: juny <juny57@rcn.com>
Message-ID: <lvbii0ltpq9ajeb9gsc8ibsghb1u7d9nqr@4ax.com>
Source record: 18686

Anyone out there help with suggestions?

All I get is some bleed-over from an FM broadcast station. Cannot even get NOAA weather (162.40), where their tower is on top of adjacent mountain, maybe 2 to 3 miles away!

Did my front-end die or what?

NG on local HAM repeaters either. I always was able to get both with mo problem!

I did reset with internal button, before that nothing would come on at all (and yes I have fully charged NIHM's installed (is the NIMH voltage too low?)

Also tried 9V wall wart, bleed-over came in stronger. It almost seems that the frequencies are gone.

HELP!

juny

There are at least two manufacturers of computer scanners that are fully computer controlled. Icom produces two external scanners that are connected to the computer - but I wouldn't waste your money on them as they have poor sensitivity and the software is very limited (particularly when compared to their competitors). The other manufacturer is Winradio which in my opinion is far superior to Icom. They offer a large range of both internal and external scanners (i.e. internal = a card that is installed inside your computer, external = card encapsulated within a small box that is then connected to the computer). The only drawback to this type of system is that you need to have a computer to use the scanner.
Have a look at the winradio website and I think that you should be impressed.
http://www.winradio.net

Sunday, 22 Aug 2004
Many flights of F/A-18s heading to NAS Key West; I snagged the ROMANs and TBOLTs, but did not catch the callsigns of several other flights. Heard them on 370.9 Miami Ctr, 251.15 (Jax), and 351.8 (Jax Dep).

ROMAN 21: F/A-18 flight, Oceana NAS, VFA-106 "Gladiators"
12:01pm: En route to NAS Key West.
[319.0, 323.1, 306.9]

RAZOR 01: A-10, flight of 3, Willow Grove, PA-ANG
12:06pm: Lands Patrick AFB.
[132.65, 269.375]
Photos: 057MVC-074, 075, 076.

ROMAN 11: F/A-18 flight, Oceana NAS, VFA-106 "Gladiators"
12:10pm: En route to NAS Key West.
[319.0, 323.1, 380.3, 306.9]

AJ 613: H-60 flight of 3, Jacksonville NAS HS-11 "Dragon Slayers"
12:30pm: Lands Patrick for fueling.
1:55pm: Departs Patrick.
[281.425, 269.375, 335.8; Air-air on 264.2]
Looks like they have abandoned their AB-6## tail; evidently reassigned.

BAMA or BUDDHA: F-16, Montgomery-Dannelly Field, AL-ANG "Snakes"
1:05pm: Area transition.
[Bama Ops 276.8]

BOBCAT 55: T-45, Meridian TW-1 VT-9 "Tigers"
1:20pm: Departs Patrick to Savannah, after RON.
[289.4, 269.375, 281.425]

MARLIN 35
2:05pm: Area transition.
[135.075]

EAGLE 31
2:08pm: En route NAS Key West.
[335.5 Miami Ctr @ Ft Myers, 306.9 Miami Ctr Key West Remote]

TBOLT 31: F/A-18 flight of 3, Beaufort VMFA "Thunderbolts"
2:12pm: En route NAS Key West.
[285.5]

LT 623: P-3C, Jacksonville NAS VP-62 "Broad Arrows"
4:50pm: Area transition.
[119.825]

REACH 7048: C-17A, Charleston 437AW
6:04pm: Lands Patrick.
[372.2, 132.65, 133.75]

Source record: 18693

That might be a possiblity on a trunked radio system Jim, but i'm not certain. I know that an "ID" is transmitted from the unit on trunked 800 systems, so they would at least know what radio the transmissions came from.

If your hypothetical concerns a typical VHF or UHF type radio, theres no way i'm aware of to remotely disable it. I work for a large PD and have had HT's and other radios stolen from us in the past. The jackasses end up playing around on the air for a while, until the battery goes dead. Then the unit probably ends up for auction on Ebay....LOL.

Chris

Interesting thought ... I think you can be certain of
it in the MK2/3, but the slot card will probably run $399 when they
become available.

However, as prohibitive a price as that may sound for a miniature chip
encased in a cheap plastic shell, only the AOR owner will know it's
worth every penny.

I went to the RS store in the Palmdale mall today. Just got back.
The guy in the store did not know what the PRO-96 is. He had to look it up on the computer. So to try to find out anything like the version 1.1, 1.2 or 1.3. or any questions on how to run it is not going to happen. This kind of stuff is why I try to not buy Radio Shack stuff. But I keep hearing the PRO-96 is a good scanner so if I can find some Radio Shack guy that knows a little something I will get one.
I would get one from E Bay or other on line store but I can't know what version it is.

I used to have a Pro - 37, and I had problems with corrosion at the
antenna base,(in side the scanner at the place that the wires that
connect to the circuit board) and also corrosion on the pins where the
two circuit boards attach to each other. The local FM maybe
"overloading" your scanner "front end", this causes distorted
reception, but no reception of the frequencies that you are tuned to.
Are you still getting a frequency readout on the LCD? So try to see
if you have any corrosion (like I had). If you do not want to take
the scanner apart yourself, you may be able to get a radio repair shop
to do it. If no corrosion is found, then maybe someone else on this
newsgroup can help with better suggestions.

I'm not real familiar with that unit, nor do I have a schematic for it.....
There are reference crystals in there, perhaps one of them went bad. I DOUBT
that unit has a lithium memory cell in it, but if so, maybe it is bad. Does
it show in scanning or manual mode, any frequencies you've had stored in?
Don't depend JUST on NOAAs transmitter as a test.. Though it should be a
good one, they may be having a problem or there could be something impeding
the signal to you from them. Case in point, our NOAA tx used to come in real
well. As of late, it doesn't. There are spotty areas that weren't there
before.
So, try a local frequency.... as a secondary test. As the gentleman stated,
your antenna connections "may" be bad.Then too, the RF Amp or IF amp could
have went bad. Things do happen when not in use. Could be bad solder joints,
bad caps, bad crystals... etc.

L.

I took my PRO-96 back. A scanner for $500.00 with no military air coverage?
There is also a CPU bug (Just like the Pro-93) concerning talkgroups and
when Radio Shack was contacted asking about
a fix. They played dumb. I would go with a Uniden BC296.

Icom no longer makes the PCR-100...only the PCR-1000. WiNRADiO's internal "scanner" cards still require an ISA bus slot...no PCI yet available, except for their overpriced short-wave receiver card. They do have a few external options.

FOR SALE $800.00 DOLLARS CANADIAN CURENCEY = FIRM

Any one interested please email me direct at:

slstdenis@sympatico.ca

Brand new in the box.

Yaesu VR-5000

Wide Band Table Top Receiver/Scanner

Comes with 70' foot long wire antenna

The exciting world of communications monitoring, from Longwave to Shortwave to Microwave, comes to your home or station with Yaesu's new VR-5000 Communications Receiver. Professional features, professional ergonomics, and professional DSP-based selectivity* are yours to enjoy today-and only from Yaesu! *Opptional DSP-1 Unit required

0.1 ~ 2599.99998MHz* All-Mode Wide-Band Receiver (*Cellular blocked)

Auto-Mode, Auto StepDual Receive

Preset Shortwave Broadcast Station Memory Bank

World Clock with UTC/LOCAL settings

Program Timer, Alarm Timer, Sleep Timer

Real-Time Spectrun Scope

2000 Memory Channels

Graphical Memory Display (PMR)

Memory Over-write Protection Mode

Memory Offset Tuning

Memory-Skip during Scanning

Memory Sort Mode

VFO Scan, Memory Scan

PMS (Programmable Memory Scan)

Main-Sub Two-Channel Scanning

CW Narrow-Bandwidth Peaking Filter

CW Tone Pitch Control

RF Tune" Front-end, 20 dB Attenuator

IF Noise Blanker

Optional DVS-4 Digital Voice Recorder

Optional FVS-1A

10.7 MHz IF Output Jack

Field Strength Meter, Audio Tone Control

All-Mode Squelch Control

Password-controlled Panel and Dial "Lock"

Front Panel Key "Beep" On/Off

Display Dimmer/Contrast Control

Clone Capability

Personal Computer Interface Port

Two Antenna Ports, Audio Wave Meter

End......

Any software-controllable radio (most are) driven with any compatable
software could be remotely controlled from anywhere with:

http://www.symantec.com/pcanywhere/Consumer/

If you are in the same building, on the same LAN, then it's a piece of cake
to use any of the dozen free software radio controls or 30-50 professional
programs that let you control the radios. From power-up to scanning radio
banks or software files, it;'s been done like this for a decade now.

Jack

Source record: 18604

I forgot to add - logging the radio-interfaced computer into yahoo-chat or AOL chat, etc, allows you to actually listen to the audio from the remotely controlled radio. All it takes is a patch cord from the radio's headphone-jack or line out, into the computer sound card's mic-in or line-in. Simple as that.

Correct, Pro96 is junk, the 296 rulez and much better PC software available.

You can not upgrade pro96 in the field, you must send it back to RS! Uniden
is field upgradable!
RS really lost it this time...

Looking for frequencies for the Saint John,NB area.

1645. Re: What happens when a 2-way radio gets lost?

Newsgroup: rec.radio.scanner
Date: 2004-08-25 02:03:08 UTC
From: Paul Hirose <ewwb4-khh25@earINVALIDthlink.net>
Message-ID: <412BE897.76FF5503@earINVALIDthlink.net>
Source record: 18610

Several years ago I had to track down some missing government property: a Motorola handheld trunked radio. The land mobile radio shop was able to determine that it hadn't been turned on anytime recently, at least within range of our net. When one of these radios powers up, it gets on the air and logs in, even if the transmit button isn't touched. The event is recorded and time-stamped in a computer.

The tech said that if desired they could put a "trap" on the missing radio, which would disable it at login.

My memory is a little hazy on the outcome, but I think the radio was eventually found in the desk of an authorized user who had simply forgotten about it.

Recently I heard a Los Angeles County Sheriff dispatcher ask a deputy to get his radio reset, because it was showing "stolen" on their computer and triggering warnings at the dispatch center every time he keyed his mic.

Check the back-copies of Monitoring Times, who feature lots of Canadian info. Their website may have something available. Generally the 'Mounties and Provincial Police are migrating to trunked systems everywhere, maybe not digital (yet) everywhere. And from 2.182 Mhz St John Coast Guard makes excellent weather reports (normally gale warnngs for the maritimes). They shift to maybe 2598 or 2497, can't remember which but it is announced regularly. Same for St Anthony, Halifax and others in your target of interest. VHF Marine traffic will use the International vhf-marine channels.

I'm into Ham Radio, but am now also interested in scanning. Here's my situation, I want to buy a scanner for use in the Lancaster County, PA and surrounding areas, even surrounding states. I've read about Pennsylvania's switch to an M/A Com Opensky system and realize that no scanner on the market today will be able to track that (correct me if I'm wrong). I'm considering a
Uniden BC250D or BC296D and would like to buy one now, but don't want to spend the money on one and have to upgrade it if an Opensky compatible scanner hits the market soon. I've seen lots of frequency listings on the web, but I'm not sure if what I can receive in my area now will require a digital 3600 baud ACPO 25, a digital 9600 baud ACPO 25, or even a non-digital. Basically, if a digital scanner won't do much for me now, I'll skip that and buy a non digital scanner and save some money for later when an Opensky scanner may become available. Maybe the BC250D will be good for my area right now and the BC296D would be a waste of money because I won't be able to take use of its 9600 baud capabilities. Maybe even a different scanner would be a better choice. Anyone familiar with my area (i.e. frequencies in use, type of system in use, digital 3600 baud or 9600 baud in use, scanners available to fit my area, etc)?

Hi, does anyone know where I can get some info on this?

I would like to know if there is a list of freqs, or even what types of systems are used here (E1, E2 ED etc)

I have found that a protocol MPT 1327 is in widespread use here, but I'm not sure how this relates to E1 E2 etc.

I have found a trunked band freq spread (406-410 mobile & 414-418 base) but I'm nut sure which freqs to enter into my uniden 245XLT

Do I just search between these in the normal manner and enter all that I find??

TIA

Southern Kiwi,

MPT is widespread throughout the country because Tait is the supplier of most radios in New Zealand. It's a bit like Motorola's stronghold over America. For many years the only trunked radios Tait made were MPT radios (because it is an open standard. Now they also manufacture a few LTR radios as well. Soon they will be releasing an APCO 25 capable digital radio, but this will not be trunked it will just be plain old digital.

As for where to find the frequencies see if the Communications Authority has a web site you can search, otherwise have a look through Yahoo for groups on New Zealand scanning. Apart from that search the trunk bands for data sounds and see what you recognise.

Over the last couple of years a few Motorola trunk systems have also started to pop up around New Zealand as well I understand but I don't really know where they are.

The Yahoo group Trunk Scan Australia does have a few New Zealanders on it also that may be able to help you with what your looking for.

Brian.

Thanks for that Brian, when I find the data channel, do I just put it in the
trunked bank?
And I will try that Yahoo group

1657. gaps in manufacturers' sensitivity specifications

Newsgroup: rec.radio.scanner
Date: 2004-08-26 18:50:14 UTC
From: Dan Jacobson <jidanni@jidanni.org>
Message-ID: <873c2920pl.fsf@jidanni.org>
Source record: 18623

The Kenwood TH-F6A/F7E's manual's sensitivity specifications skip 250-380 and 700-800 MHz FM, etc. The Icom R-2's specs skip 30-228 MHz AM, etc. Both skip lots of WFM.

Does this skipping mean the specs in those ranges don't look good, so they would rather not mention them. Or no one is supposed to use the receiver in that mode for those frequencies so publishing specs for those ranges would look unprofessional. Or testing takes a big budget, so if they were to publish specs for all ranges, it would only up the price of the scanner, so one should be happy. Or what.

Amateur Radio Newsline™ Report 1410 - August 20, 2004

Amateur Radio Newsline report number 1410 with a release date of
Friday,
August 20th, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. Ham radio is ready as Hurricane Charley
comes
ashore. Find out the details on Amateur Radio Newsline report number
1410 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: HAM RADIO AND HURRICANE CHARLEY

Packing 145-mile per hour winds Hurricane Charley slammed into west-
central Florida, ravaging oceanfront homes and trailer parks, tearing
apart small planes and inundating the coast. More than a half million
customers were left without power or telephone service statewide.
Damage
was especially heavy in downtown Punta Gorda on Charlotte Harbor.
Warren Elly, W1GUD, is a Tampa based TV reporter sent to cover the
aftermath of Charley coming on shore:

--

Audio report only. Hear it in mp3 audio in the current newscast
posted
at http://www.arnewsline.org/quincy

--

Warren's report was filed early Monday the 16th. Since then
President
George Bush has declared some sections of Florida as a major disaster
area. His brother, Florida Governor Jeb Bush, projected damage from
Charley could exceed 15 billion dollars, but that estimate was
preliminary. (ARNewsline(tm))

**

RESCUE RADIO RULES: FCC CLARIFIES EMERGENCY DECLARATIONS

The FCC has issued what amounts to a white paper to clarify the
rules
hams must follow when providing communications during an emergency.

Amateur Radio Newsline's Mark Abramowicz, NT3V, is here to sort it all
out:

--

With the hurricane season upon us and wildfires and other severe weather
hitting various parts of the nation, the Federal Communications
Commission believes now is the time for a clarification on Emergency
Communications Declarations.

What is an Emergency Communications Declaration or ECD?

When a natural disaster or accident interrupts or disrupts normal
communications systems in a particular area, the FCC - at the request of
emergency management officials or an amateur radio operator acting on
behalf of emergency officials - issues an Emergency Communications
Declaration.

Essentially, the order defines special conditions and special rules to
be followed by amateur radio stations providing service during the
communications emergency in that particular area.

The FCC says occasionally, it receives requests for Emergency
Communications Declarations before a hurricane or tropical storm hits.
The FCC says such requests generally arrive anywhere from 24 to 72 hours
in advance of weather predictions citing potential damage to a
particular area.

But under Section 97.401(a), emergency communications before an event
CAN be established to meet essential needs of a community or to help
prepare relief activities. The commission acknowledges preparations to
meet a disaster may overload or damage normal communications systems so
it allows amateur stations to make emergency transmissions at any time
prior to or even during a disaster.

In essence, the FCC says there's no need for an ECD because the actual
event disrupting communications has not occurred.

So, the FCC says such declarations WILL NOT be issued until AFTER the
disaster disrupts normal communications in a geographic area subject to
FCC regulation.

Speaking of emergencies, it doesn't necessarily have to be a weather-related incident, as we found on September 11, 2001. It can also be a transportation accident such as a railroad incident or a fire or explosion.

Whatever the emergency, once communications are disrupted, the FCC says there are only two sources from which it will accept an application for an ECD. The first is an emergency management official responsible for communications in the affected area. The second is an amateur radio operator acting at the request of an emergency management official.

The FCC says such applications must contain very specific information such as:

- The date the event has taken place.
- The nature of the disaster.
- A description of the communications system disrupted and a contact person who can verify the damage.
- The geographic area affected - city, county, state or region.
- Listing of the VHF/UHF, MF or HF frequencies to be used during the emergency.
- An estimated time the disruption of normal communications is expected to last.

The FCC says an Emergency Communications Declaration will contain an expiration date. However, the commission says that date can be extended at the request of the emergency official or authorized party making the original request.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

The FCC's Communications and Crisis Management Center is the place where Emergency Communications Declaration requests are sent. You can reach them by phone at 202-418-1122, that's 202-418-1122. FAX requests are handled at 202-418-2813, 202-418-2813. Or, you can make the filing by e-mail to comm(hyphen)ctr@fcc.gov. (ARNewsline (tm))

**

EMERGING TECHNOLOGY: AUTOMATING EMERGENCY ALERTS

A new technology soon to debut in 12 states will significantly extend Amber alerts, reaching cell phones, e-mail and handheld computers. It could also be used to transmit weather and terrorism alerts.

According to news reports the system uses a simple broadcast technology that takes the information from a Web portal and reconfigures it for different types of broadcast. By way of example, a state department of transportation might receive it in one format for its road signs and another for its information number.

More important, people with cell phones can sign up to receive Amber alerts with their local county or with state authorities. The text of an alert can be sent immediately to local TV news stations and Web sites.

RADIO RULES: INTERNET LINKING IN THE UK

Telecommunications regulators are about to make ham radio internet linking a lot easier on the other side of the Atlantic. This, as Ofcom which is the U-K equivalent of our FCC issues new and more liberalized rules. RSGB news presenter Jeramy Boot, G4NJH, has more:

--

Ofcom has announced the decisions it has taken about changes to the procedure and terms of issuing Notices of Variation (NoV) for Internet Linking Gateways.

Ofcom proposes to pass the Internet-linking NoV process to the RSGB to issue NoVs on behalf of Ofcom. The RSGB will be announcing procedures for NoV renewal shortly and queries on the renewal process should be directed to the Society.

Ofcom's decisions were made following the notification of four proposals
which gave those holding an NoV the opportunity to make representations.

Jeramy Boot, G4NJH, in Nottingham.

--

For those interested the complete set of new U K Internet linking rules
is on line at http://tinyurl.com/4LE8P (GB2RS)

**

RADIO RULES: VANITY FEE REMINDER

Back here in the USA, a reminder from the FCC that the new Amateur Radio
vanity call sign fee of $20.80 for the 10-year license term became effective on Tuesday, August 10th. Not on Friday, August 6 as we and and others had announced.

The reason for the last minute change? A management-level staffer in the FCC's Office of Managing Director explained to the ARRL that the Commission was not necessarily bound by the August 6 effective date The
Federal Register indicates. That date was 30 days after publication of
the order containing the new fee schedule. (ARRL, FCC)

**

ENFORCEMENT: NO LICENSE - STAY OFF THE AIR

Meantime the FCC has written to a pair of unlicensed operators telling
them to stay off the air. The agency's Daryl Duckworth, NNZ0W, explains:

--

Duckworth: A warning notice went to Rick Shepherd of Crescent City, California for unlicensed operation on 146.515 MHz along the Oregon/California border aboard the fishing vessel Sunset.

David Shoemaker of Sebina, Ohio, also apparently not in the FCC Licensing Database was issued a warning notice for unlicensed operation
from a vehicle with license plates registered in his name. The transmissions were on 28.085 MHz near the intersection of I-71 and U.S.
36.

--

Shepherd and Shoemaker were both told that operation of radio transmitting equipment without a license is a violation of Section 301
of the Communications Act of 1934. They were also informed that continued operation could lead to fine or imprisonment, as well as seizure of any non-certified radio transmitting equipment that they own.
Monetary forfeitures for unlicensed operation normally range from $7,500
to $10,000. (FCC, RAIN)

**

RADIO RULINGS: FCC PERMITS SAN JOSE STATION TO BUILD SAN FRANSCISCO TRANSMITTER

The San Franscisco Chronicle reports that thousands of people in and around San Francisco will be able to watch NBC television over the air
again. This, courtesy of a Federal Communications Commission ruling on
Thursday, August 12th, that will let KNTV build a new transmitter to cover the area.

According to the news story, the San Jose based station will be permitted to construct a new transmitter atop San Bruno Mountain which
overlooks San Francisco. The station claims this site will reach 400,000 people who lost service when KNTV became the Bay Area's NBC affiliate in 2001. (FCC, San Franscisco Chronicle and other published
news stories)

**

NAMES IN THE NEWS: ANOTHER OPERATION FROM IRAQ

Even as the military action in Iraq continues another ham radio stAtion
has come on the air from that war torn region. This, word that Ryszard
Nowakowski, SP8HKT has been licensed to operate as YI9KT.

Ryszard will be there for five months. He uses a 100 watt radio into a
vertical antenna on all bands from 40 to 10 meters. He operates mostly
on C-W but will come onto SSB if you make the request. (GB2RS)

**

NAMES IN THE NEWS: NEW QCWA OFFICERS ELECTED

Former FCC rules man John B. Johnston, W3BE, is the new President of the

Quarter Century Wireless Association. Also elected are Vice-
President
Bob Roske, NOUF: Secretary Alan Pickering, KJ9N and Treasurer Frank
Harris, WA4PAM

Elected to serve as QCWA Directors are Tom Atkins, VE3CDM: Harold
Chase,
W1EES: Lew Gordon, K4VX: Jerrel Jones, W5TUU; Ray Minichello, W1BC:
Len
Nathanson, W8RC: Blanche Randles, W4GXZ, and Ed Yoder W3YMB.

Both Gordon and Nathanson are former Directors of the ARRL. 2307
QCWA
members returned ballots in this years election. (QCWA)

**

EVENTS: 2004 QCWA NATIONAL CONVENTION IN OTTAWA

And speaking about the QCWA. word that the organization will hold its
2004 international convention in Canada. The dates are October 15th
through the 17th at the Lord Elgin Hotel in Ottawa.

This years gathering is hosted by the National Capital Chapter 70.

**

ON THE NET: LINUX CONTINUES TO GROW

The use of the Linux operating system especially among experimenters
including ham radio operators is quietly growing. One in five
servers
sold last year to handle Internet traffic and corporate networks ran
on
Linux.

Observers say that the economic downturn may be responsible for the
Linux move. The Linux operating system was created as the people's
software, free and open for everyone to use in an attempt to thwart
the
commercialization of all Internet technology. Amateur radio was

among
tgher first to truly embrace it and may ham radio applications are
written for Linux based operation. (Published news reports)

**

HAM RADIO IN SPACE: NASA CELEBRATES ISS AT MARINA AIR FAIRE

Scott Avery, WA6LIE, reports over the AMSAT mailing list that NASA
will
have a booth set up at the Marina Air Faire in Marina, California
on
October 16th. Scott says that the plan is to make a live I-S-S voice
contact and to also have a video of Q-S-O's made with the space
station
playing for passers by to see. Scott adds that any help in getting
video files of school contacts with the I-S-S would be appreciated.
For
more information please contact him by e-mail to wa6lie@msn.com
(WA6LIE)

**

WORLDBEAT: LIGHTHOUSES OF AUSTRALIA 2004 ANNUAL DINNER WEEKEND

Turning to news from around the world, word that this year's
Lighthouses
of Australia Dinner will be held in Launceston, Tasmania Saturday,
October 2nd. The dinner will include a tour to the National Archives
Office Exhibition on Australian Lighthouses titled "Beacons by the
Sea."
Also scheduled is a visit to the Low Head Light and the Pilot Station
Maritime Museum also at Low Head the same weekend. (WIA News)

**

WORLDBEAT: RADIO CLUB GETS GRANT TO TEACH THE HOBBY

The Thornton-Cleveleys Amateur Radio Society in the United Kingdom
has
recently received a grant of close to 5,000 British Pounds. This, to
help in the promotion of amateur radio. Over the past two and a half
years the club has held 18 examination classes with 150 passing the U-
K
Foundation class ham radio license exam. (GB2RS)

**

WORLDBEAT: GB4WTA COMMEMORATING THE UK WIRELESS TELEGRAPHY ACT

GB2RS reports that Ted Moore, G7AIR, and members of the Eddystone
Users
Group will operate as GB4WTA on Sundays and some Saturdays through
the

28th of August. The station commemorates the centenary of the United Kingdoms Wireless Telegraphy Act, which came into effect on the 15th of
August 1904. GB4WTA will operate from Wireless Hill in the Rutland area. (GB2RS)

**

DX

In D-X word that K4QD will be QRV August 16 to 27 portable HH4 from. This, from the Northwest Christian Mission in Haiti. Activity will be
on most H-F bands plus 6 meters, using CW and SSB as time permits. QSL
to his home call. (K5SW via VHF Reflector)

And GB6LOP is a special events station that will take to the air to celebrate the 60th Anniversary of the Liberation of Paris during Word War 2. The station will operate on all modes, starting August 25th and
will be on for 4 weeks. Your QSL card will be required beforehand in order to receive the special QSL from this station. Please QSL via RSARS
QSL Bureau. For further information contact G0SWY by e-mail to G0SWY@aol.com (G0SWY)

And also listen for HS7-B on from Thailand. This special event call sign has been issued to celebrate the Queen's 72nd birthday. The call sign will be in use during any SEA NET activities. QSL via operators' instructions. (RSGB)

**

THAT FINAL ITEM: THE BIG T-HUNT: HOW THE U.S. NAVY KEEPS TRACK OF EARTH
ORBITING SATELLITES

The U.S. Navy has built an exotic radar system to track earth orbiting
satellites, and the system has been in place for many years. Now, thanks to a couple of sleuths, details of the Navy's system have been posted on the web. Amateur Radio Newsline's Bruce Tennant, K6PZW, has
the details:

--

The Navy's satellite tracking system appears to consist of multiple transmit and receive sites across the U.S., and one of the receive sites
just happens to be located in San Diego County a few miles north of Brown Field. This, according to web-published coordinate data as

reported in the CGC Communicator broadcast industry newsletter.

And if think UHF moon bounce antennas have gain, wait until you see the
giant array built near Lake Kickapoo, Texas. This two mile long antenna
transmits continuously on 216.98 Mhz with an unmodulated carrier and has
a beamwidth of only 0.02 degrees in one plane. So powerful is the
transmitted signal that when the moon passes through the beam, the
return echo is said to be detectable on earth with only a dipole antenna
attached to a receiver. Talk about the ultimate E-M-E.

For the Amateur Radio Newsline, Im Bruice Tennant, K6PZW, in Los
Angeles.

--

If all this is fascinating and you want to learn more, take your web
browser over to:

1659. Problems with BC898T CTCSS/DCS

Newsgroup: rec.radio.scanner
Date: 2004-08-26 21:42:41 UTC
From: Dave Z <n9ewoNOSPAM@yahoo.com>
Message-ID: <412e5955$0$19789$18feec2b@news.ticon.net>
Source record: 18624

Hi to all,

My BC898T died yesterday. After being on for say 8 to 10 hours the CTCSS/DCS stops working. Regular signals still receive ok, but CTCSS/DCS don't (just scans right pass all of them them). If I
turn it off and back on again it works for another 8 to 10 hours and konks out again in the same time frame.

Firmware is : U 1.27 (SEd7H)

Will be on it's way to Uniden (Ft Worth) tommorrow. Is Uniden's repair any good ??

Regards,
Dave
